Preface	xi
Introduction	I
I BACKGROUND	7
1.1 The child and his milieu	7
1.2 The linguistic theory presupposed	9
1.3 The method and scope of study	9
1.3.1 Method	9
1.3.2 Scope	10
1.4 The method of analysis	11
1.4.1 The child's phonology as a function of the adult language	11
1.4.2 The child's phonology as an independent system	12
2 THE CHILD'S PHONOLOGY AT TWO YEARS	13
2.1 A's phonology as a mapping from adult English	13
2.1.1 Informal exemplification of the realisation rules	13
2.1.2 Formal statements of the realisation rules	22
2.1.3 Derivations exemplifying the realisation rules	31
2.1.4 Exceptions	35
2.2 A's phonology as a self-contained system	37
2.2.1 Informal exemplification of A's system	37
2.2.2 Informal statement of morpheme structure conditions	40
2.2.3 Formal statement of morpheme structure conditions	45
2.2.4 Phonetic rules of A's system	50
3 LONGITUDINAL ANALYSIS OF A'S PHONOLOGY	52
3.1 Longitudinal analysis of A's phonology as a mapping from ESP	53
3.2 Longitudinal analysis of A's phonology as a self- contained system	103

4	THE NATURE OF THE ACQUISITION OF PHONOLOGY	132
4.1	The child's competence	133
4.1.1	The nature of the child's lexical representation	133
	<i>Excursus</i> On the phonetic progression of acquisition; and on repeated trends in the acquisition process	140
4.1.2	Evidence that the child's performance is not a clear reflection of his competence	148
4.2	Formal evidence for the validity of the realisation rules	155
4.2.1	Rule simplification	155
4.2.2	Rule ordering	158
4.3	The function of realisation rules	161
4.3.1	Vowel and consonant harmony	162
4.3.2	Cluster reduction	165
	<i>Excursus</i> Cairns' hypothesis	168
4.3.3	Systemic simplification	169
4.3.4	Grammatical simplification	171
4.3.5	Other functions of the realisation rules?	175
4.3.6	Formal properties of the realisation rules	176
4.4	The evidence for the child having his own system	178
4.4.1	Evidence for the child's system being equivalent to his output	178
4.4.2	Evidence for the child's system being more abstract than the adult surface system	180
4.5	A psychological model of the acquisition of speech	181
5	LINGUISTIC IMPLICATIONS OF THE CHILD'S ACQUISITION OF PHONOLOGY	185
5.1	Phonological units	185
5.1.1	Distinctive features <i>versus</i> phonemes	185
5.1.2	Syllables <i>versus</i> morphemes	191
5.2	Distinctive features	192
5.2.1	Major class features	193
5.2.2	Cavity features	195
5.3	Other theoretical constructs	199
5.3.1	Marking conventions	199
5.3.2	Abbreviatory notations	201
5.3.3	Conspiracies	204
	Conclusions	206

Appendix A	Correlation of stages and ages	208
Appendix B	Assumed feature matrix for the consonants of the adult system serving as input to the realisation rules	209
Appendix C	Diachronic lexicon	210
