GLOSSARY OF SYMBOLS xv

1 FUNDAMENTALS 1

1.1 Basic Definitions 5

 1.1.1 *Languages* 5

 1.1.2 *Grammars* 7

 1.1.3 *Classification of Grammars* 13

1.2 Ambiguity in Context-Free Grammars 14

 1.2.1 *Bracketed Forms* 14

 1.2.2 *Derivation Trees and Ambiguity* 17

 1.2.3 *Examples of Ambiguous Grammars* 19

 1.2.4 *A Negative Result* 24

Exercises 25

1.3 Graph Searching 27

 1.3.1 *Developing an Algorithm* 29

 1.3.2 *Choice of Data Structures and Implementation* 32

 1.3.3 *Checking the Solution* 35

 1.3.4 *Summing Up* 39

1.4 Useless Productions 40

 1.4.1 *Rephrasing the Definition* 41

 1.4.2 *Accessible Non-terminals* 42

 1.4.3 *Terminating Productions* 43

Exercises 57

Bibliographic Notes 57

2 REGULAR LANGUAGES 59

2.1	Transition Diagrams and Non-Deterministic Machines	60
2.2	Regular Expressions	63
2.3	Converting a Non-Deterministic Machine into a Deterministic Machine	71
2.3.1	<i>The Language Recognized by a Deterministic Machine</i>	73
2.3.2	<i>The Language Recognized by a Non-deterministic Machine</i>	75
2.3.3	<i>The Conversion Algorithm—An Example</i>	76
2.3.4	<i>A Rigorous Development of the Conversion Algorithm</i>	78
2.4	Numbers in ALGOL	81
Appendix—Proof of Theorem 2.1		86
Exercises		87
Bibliographic Notes		90

3 LL PARSING 92

3.1	Syntax Analysis by Recursive Descent	92
3.2	Checking the Strong LL(k) Condition	102
3.2.1	<i>Calculating FIRST_k Sets</i>	104
3.2.2	<i>Calculating FOLLOW_k Sets</i>	107
3.2.3	<i>A Complete Example</i>	110
3.2.4	<i>A Test for Ambiguity</i>	115
3.3	The Special Case $k=1$	116
3.3.1	<i>Graph-Searching and the FIRST and FOLLOW sets</i>	117
3.3.2	<i>An Efficient Algorithm</i>	123
3.3.3	<i>Implementing the Algorithm</i>	125
3.4	LL(k) Grammars	138
3.5	Practical Considerations	147
3.5.1	<i>Eliminating Terminal Procedures</i>	147
3.5.2	<i>Extend BNF</i>	148
3.5.3	<i>Overcoming Non-LL(1) Features</i>	151
Exercises		152
Bibliographic Notes		155

4 LR PARSING 157

4.1	LR(0) Grammars	158
4.1.1	<i>The Basic Parsing Algorithm</i>	158
4.1.2	<i>Calculating the LR(0) Contexts</i>	161
4.1.3	<i>Developing the Parsing Algorithm</i>	164
4.1.4	<i>The LR(0) Condition</i>	168

4.2	LR(k) and SLR(k) Grammars	172
4.2.1	<i>LR(k) Grammars</i>	172
4.2.2	<i>Simple LR(k) Grammars</i>	176
4.3	Theoretical Comparisons	181
	Exercises	186
	Bibliographic Notes	187

5 ERROR REPAIR 189

5.1	String-to-String Repair	190
5.1.1	<i>Edit Operations</i>	190
5.1.2	<i>The “Best” Repair</i>	191
5.1.3	<i>A Formal Model</i>	195
5.1.4	<i>Equational Characterization</i>	197
5.2	Repair of Regular Languages	199
5.2.1	<i>An Example</i>	199
5.2.2	<i>The Formal Model</i>	202
5.2.3	<i>Equational Characterization</i>	203
5.3	Repair of Context-Free Languages	204
5.4	Algorithms for Finding Least-Cost Repairs	210
5.4.1	<i>Dijkstra’s Algorithm</i>	212
5.4.2	<i>Gaussian Elimination</i>	214
	Exercises	216
	Bibliographic Notes	217

6 ERROR RECOVERY 219

6.1	A Simple Recovery Scheme	221
6.2	Our Objective	227
6.3	Locally Optimal Repairs	233
6.3.1	<i>The Definition</i>	234
6.3.2	<i>Production Positions</i>	237
6.3.3	<i>Repairs and Actions</i>	239
6.3.4	<i>Program 6.2 Again</i>	241
6.3.5	<i>Passing Parameters</i>	242
6.3.6	<i>A Summary</i>	247
6.4	Does It Work?	247
6.5	Error Recovery in a PL/0 Parser	254
	Exercises	270
	Bibliographic Notes	271

- 7.1 The *uvwxy* Theorem 273
 - 7.2 Semantic Ambiguities in ALGOL 60 279
 - 7.2.1 *Side Effects* 279
 - 7.2.2 *for Statements* 280
 - 7.3 Syntactic Ambiguities in PASCAL 282
 - 7.3.1 *Types* 283
 - 7.3.2 *Scope Rules* 284
 - 7.4 Conclusion 287
- Exercises 287
- Bibliographic Notes 288

INDEX 293
