Acknowledgments	vii
1. Introduction	1
I. Formal Methods and Theories	
2. General Characteristics of Formal Theories	29
3. The Development of a Formal Theory	48
4. Experimental Work with Mathematical Models	63
5. Analysis and Verification of Computer Models	95
6. Types of Formal Theories	101
7. Uses of Models	108
8. Formalization	115
9. The Implicit Ontology of Formalists	124
II. Participant-Observer and Clinical Methods	
10. The Holist Standpoint	137
11. Main Steps of a Case Study	142
12. Holistic Uses of Statistics	169
13. Comparative Methods and the Development of Theory	182
14. Typologies: Real and Ideal Types	197
15. Some Characteristics of Holist Theories	203
16. The Use and Verification of General Theory	225
17. Structural-Functional Theories	235
18. The Practical Use of Case Studies	259
19. Weaknesses and Problems of Case Study Methods	277
20. The Implicit Ontology of Case Study Methods	286

III. Methods in the Philosophy of Science

21.	The Participant-Observer Method	291
22.	The Method of Rational Reconstruction	304
23.	The Typological Method	311
24.	The Method of Conceptual Analysis	316
25.	Science, Philosophy, and Astrology	319
