Table of Contents

Pı	Preface v				
1	Ir	ntroduction	1		
2	Selected Hydrogeological and Engineering-Geological				
	Т	erms and their Relationship to the Geophysical			
	P	roperties of Rocks	9		
	2.1	Principal Hydrogeological Terms	9		
		2.1.1 Water in Rock Medium	9		
		2.1.2 Characteristics of Ground Water and Hydrogeological			
		Bodies	12		
	2.2	Engineering-Geological Characterization of Rocks and			
		Rock Masses	13		
	2.3	Physical Properties of Rocks	21		
3	Geo	ophysical Surveys for Hydrogeological Purposes	31		
	3.1	Hydrogeological Structures and their Geophysical Models	31		
		3.1.1 Geological Beds and Geophysical Layers	32		
		3.1.2 Thickness of a Sedimentary Complex, Depth to Bedrock			
		and Key Horizons	39		
		3.1.3 Displacement or Throw of Key Horizons	48		
		3.1.4 Tectonics and Fault Zones	52		
	3.2	Determination of Hydrogeological Parameters of Geological			
		and Water Bodies by Geophysical Methods	57		

	Surveys in Hydrogeological Studies)1
4	Methods, Techniques and Organization of Geophysical	
	3.2.8 Migration Parameters	98
	of Ground-Water Flow	90
	3.2.7 Filtration Velocity, Ground-Water Velocity, and Direction	
	3.2.6 Dissolved Solids Content in Ground Water	86
	Depression	80
	3.2.5 Depth to Ground Water and the Shape of the Cone of	
	and Protective Capacity	71
	3.2.4 Permeability, Hydraulic Conductivity, Transmissivity,	
	3.2.3 Moisture Content and Degree of Saturation	70
	3.2.2 Porosity and Fracturing of Rocks	55
	3.2.1 Lithology and Shaliness	58

4.1	Regional and Detailed Hydrogeological Surveys	101
	4.1.1 Shallow Hydrogeological Structures	102
	4.1.2 Major River Deltas, Littoral and Coastal Zones and	
	Islands	109
	4.1.3 Sedimentary Basins and Consolidated Sediments	110
	4.1.4 Neovolcanic Areas	119
	4.1.5 Crystalline, Igneous, and Metamorphic Rocks	124
	4.1.6 Karst Areas	125
4.2	Special Hydrogeological Surveys	130
	4.2.1 Thermal, Hypothermal and Mineral Waters	131
	4.2.2 Pollution of Ground Waters and Delineation of Protection	
	Zones	133
	4.2.3 Land-Improvement Surveys	140
4.3	Hydrogeology of Mineral Deposits	142
4.4	Special Hydrogeology	148
	4.1 4.2 4.3 4.4	 4.1 Regional and Detailed Hydrogeological Surveys

	4.5	Logging of Hydrogeological Wells	150
		4.5.1 Dynamics of Water in a Borehole	155
		4.5.2 Control of Technical Conditions and Casing of	
		Boreholes	159
		4.5.3 Integrated Evaluation of Logging Results in a Hydro-	
		geological Structure	164
5	Geo	physical Surveys for Engineering-Geological	
	Pur	poses	165
	5.1	Physical State of Rock and its Evaluation Using Geophysical	
		Methods	165
		5.1.1 Delineation of Quasi-Homogeneous Blocks in a Rock	
		Massif	167
		5.1.2 Determination of Rock Physical Properties by In-Situ	
		Geophysical Measurements	177
	5.2	Stress and Strain States in Rock Massifs	179
		5.2.1 Changes in Stress State After the Opening of a	
		Mine Work	180
		5.2.2 Surface Deformations Due to Underground	
		Excavations	187
		5.2.3 Slope Movements	187
6	Geo	physical Surveys in Engineering-Geologic	
	Inv	estigations	195
	6.1	Compilation of Engineering-Geologic Maps	197
	6.2	Slope Stability	201
	6.3	Communication and Pipe Lines	205
	6.4	Foundation Investigations for Building	211
	6.5	Hydraulic Structures	215

	6.6	Investigation for Nuclear Power Plants	226
	6.7	Investigation for Underground Structures	231
	6.8	Hydrogeological and Civil Engineering Problems from an	
		Environmental Point of View	237
7	Spec	cial Geophysical Methods	245
	7.1	Remote Sensing	245
	7.2	Surface Geothermal Measurements by Infrared Thermal	
		Sensors	249
	7.3	Radar	253
	7.4	Radiowave Profiling RWP	256
	7.5	Geoacoustic Method	257
	7.6	Seismological and Microseismological Methods	259
	7.7	Seismic Methods Using Vibrators (Vibration Methods)	259
	7.8	Atmogeochemical Methods	261
	7.9	Logging with an Electric Cone Penetrometer	261
	7.10	The VDL Variant of Acoustic Logging	262
R	efere	nces	267
