

CONTENTS

Preface	vii
Chapter 1. Basic principles, by J. W. Robinson	1
I. Historical	1
II. The ability of free atoms to absorb	1
A. Absorption by free atoms	2
1. Absorption laws, 4-2. Oscillator strength, 6-	
B. Atomic absorption line widths	7
C. Hollow cathodes	8
III. Quantitative measurements	9
IV. Background correction	10
A. Hydrogen (deuterium) background corrector	11
B. Double wavelength background corrector	11
C. Zeeman background corrector	12
V. Available lines	12
References	14
Chapter 2. Instrumental requirements and optimisation, by J. E. Cantle ..	15
I. Introduction	15
II. The components of the spectrometer	16
A. The atomiser	16
1. Atomisation in flames, 16-2. Microsampling cup apparatus, 21-3. Atomisation without flames — electrothermal atomisation, 22-4. Vapour generation techniques, 24-	
B. Light sources	25
1. Operating conditions, 28-2. Multi-element lamps, 28-3. Electrodeless discharge lamps, 29-	
C. Monochromator and optics	30
1. The optical layout, 31-2. Dual channel optics, 33-	
D. Electronics and readout	34
1. Photomultiplier, 34-2. Source modulation, 34-3. The readout, 35-4. The use of a microprocessor, 35-	
Chapter 3. Practical techniques, by J. E. Cantle	37
I. Introduction	37
II. Sample requirements and general preparation techniques	37
A. Aqueous solutions	38
B. Organic liquids	39
C. Inorganic solids	39
D. Organic solids	39
E. Gases	39

III.	The use of perchloric acid for sample digestion.....	40
A.	Precautions in use	40
B.	Wet oxidation procedures	42
	1. Wet oxidation of dried herbage, blood, meat, custard powder or other cellulose/protein low fat materials, 43-	
IV	Calibration	44
A.	Beer's Law.....	44
B.	Reasons for non-linearity of calibration graphs	45
C.	Terminology	47
	1. Sensitivity, 47-2. Detection limit, 47-3. Precision, 49-	
D.	Working with calibration curves	50
E.	De-optimisation.....	50
V.	Methods of concentration	51
A.	Concentration by evaporation.....	51
B.	Solvent extraction of trace metals.....	51
C.	Ion exchange.....	52
VI.	Interferences in atomic absorption analysis.....	52
A.	Spectral interference	53
B.	Emission interference	53
C.	Chemical interference	53
D.	Matrix interference	54
E.	Non-specific scatter interference	54
F.	Ionisation interferences.....	55
VII.	Electrothermal atomisation, ETA	55
A.	Selection and optimisation of furnace operating conditions	57
B.	Calibration	58
C.	Sample handling and preparation	60
	1. Avoidance of contamination, 60-2. Essential precautions, 60-3. Desirable precautions, 61-4. Use of micropipettes, 62-5. Injection of organic solvents, 63-6. Sample preparation, 64-7. Chemical separations, 65-	
VIII.	Atomic emission spectrometry	66
 Applications of atomic absorption spectrometry		
Chapter 4a.	Water and effluents, by B. J. Farey and L. A. Nelson.....	67
I.	Introduction	67
A.	Characteristics of water and effluents	67
B.	Speciation of metals in water	67
C.	Public health aspects	68
D.	Atomic absorption spectrometry as applied to the analysis of waters and effluents	68
II.	Sampling and storage.....	69
A.	Sample collection	69
B.	Filtration.....	69
C.	Sample preservation	70
III.	Analysis.....	70

A. Sample pretreatment	71
1. Nitric acid method, 71-2. Sulphuric acid—nitric acid—perchloric acid method, 71-	
B. Preconcentration	72
1. Evaporation, 72-2. Chelation—solvent extraction, 72-3. Ion exchange 75-4. Co-precipitation, 76-	
C. Flame techniques	77
1. Preparation of standards, 77-2. Direct aspiration of sample, 78-3. Use of nitrous oxide—acetylene flame, 78-4. Interferences, 78-	
D. Specialised techniques	81
1. Mercury by cold-vapour atomic absorption, 81-2. Arsenic and selenium by hydride generation, 84-	
IV. Flameless atomic absorption	86
A. Application to waters and effluents	86
B. Methodology	87
C. Interferences	88
References	93
 Chapter 4b. Marine analysis by atomic absorption spectrometry, by H. Haraguchi and K. Fuwa	
I. Introduction	95
II. Seawater	96
A. Storage of seawater samples	101
B. Preconcentration	103
1. Solvent extraction, 103-2. Coprecipitation, 109-3. Ion exchange, 110-	
4. Other preconcentration techniques, 112-	
III. Marine organisms	114
IV. Sediment	118
V. Conclusion	119
References	119
 Chapter 4c. Analysis of airborne particles in the workplace and ambient atmospheres, by T. J. Kneip and M. T. Kleinman	
I. Introduction	123
A. Comparison of multielement methods	124
II. Applications	124
A. Flame AAS	125
B. Electrothermal AAS	125
III. General methods	126
A. Sampling	127
B. Sample preparation	129
1. Dissolution method, 129-2. Atomization conditions, 131-	
IV. Ambient air	134
V. Workplace atmospheres	134
VI. Conclusions	137
References	137

Chapter 4d. Application of atomic absorption spectrometry to the analysis of foodstuffs, by M. Ihnat	139
I. Introduction	139
A. Literature on applications of atomic absorption spectrometry to food analysis	139
B. Scope of chapter	141
C. Elements of interest	143
II. Sampling and preparation of analytical samples	143
A. Sampling	143
B. Preparation of analytical samples	146
1. Recommended procedures for preparation of analytical samples, 148-	
III. Sample treatment	152
A. Recommended procedures of sample treatment	153
1. Digestion with nitric and perchloric acids, 153-2. Digestion with nitric, perchloric and sulfuric acids, 153-3. Dry ashing, 154-	
IV. Recommended analytical procedures	155
A. General analytical protocol	155
1. Apparatus and reagents, 155-2. Standard solutions, 159-3. Reference materials, 160-4. Spectrometer operating parameters, 161-5. Atomic absorption spectrometry, 167-6. Reagent blanks, 168-7. Interferences, 169-8. Calibration and calculations, 169-	
B. Determination of specific elements	170
1. Sodium and potassium, 170-2. Magnesium and calcium, 172-3. Boron, 174-4. Aluminium, 175-5. Vanadium, 176-6. Chromium, 177-7. Manganese, 178-8. Iron, 179-9. Cobalt, 182-10. Nickel, 184-11. Copper, 185-12. Zinc, 187-13. Arsenic and selenium, 189-14. Molybdenum, 191-15. Cadmium, 192-16. Tin, 195-17. Mercury, 196-18. Lead, 199-	
References	201

Chapter 4e. Applications of atomic absorption spectrometry in ferrous metallurgy, by K. Ohls and D. Sommer	211
I. Introduction	211
II. Analysis of iron, steel and alloys	214
A. General solution methods	215
B. Trace-element analysis	217
1. Solid sample technique, 219-2. Preconcentration, 222-	
C. Interference of sample matrix	224
D. Precision and accuracy	227
III. Analysis of ores, slags and other oxides	229
A. General solution methods	230
1. Direct dissolution, 230-2. Universal fusion technique, 230-	
B. Trace-element analysis	232
1. Graphite tube methods (low salt content), 233-2. Injection technique (high salt content), 234-	
C. Interference of sample matrix	235
D. Precision and accuracy	236

IV.	Special AAS methods	236
A.	Development of methods for gases	236
1.	Determination of mercury in iron ores, dust and slurry, 237-	
B.	Metal determination in organic solvents	239
V.	Calibration techniques	242
A.	Calibration using standard solutions	242
B.	Recalibration procedures.	243
C.	Background correction	244
D.	Calculations and data handling	245
	References	246

Chapter 4f. The analysis of non-ferrous metals by atomic absorption spectrometry, by F. J. Bano		251
I.	Introduction	251
II.	Determination of impurities in alloys based on various non-ferrous metals	251
A.	Aluminium	251
B.	Cobalt	252
C.	Copper	253
D.	Lead	254
E.	Nickel	256
F.	Zinc.	257
III.	Electrothermal techniques.	257
	References	259

Chapter 4g. Atomic absorption methods in applied geochemistry, by M. Thompson and S. J. Wood		261
I.	Introduction	261
A.	Analytical requirements in applied geochemistry	261
B.	Atomic absorption spectrometry in applied geochemistry.	261
C.	Instrumental requirements	263
D.	Interference effects	264
E.	Sample attack methods	265
II.	General aspects of sample preparation methods	265
A.	Digestion vessels	265
B.	Heating equipment	266
C.	Dispensers and diluters	268
D.	Reagents and calibrators	269
E.	Safety	269
F.	Mechanical sample preparation	269
G.	Analytical quality control	270
III.	Sample attack methods	270
A.	Nitric acid attack for soil or stream sediment	270

B. Nitric acid—perchloric acid attack for rock, soil or stream sediment	271
C. Hydrofluoric, nitric and perchloric acid attack for rock, soil or sediment	272
D. Hydrofluoric acid—boric acid attack for silicon determination in rock, soil, or sediment	273
E. Lithium metaborate fusion attack for silicon determination in rock, soil or sediment	275
F. Chelation—solvent extraction method for determining trace metals in water samples.....	276
G. Nitric acid—perchloric acid attack for herbage samples.....	278
H. Mercury in rocks, soils and sediments	279
I. Tin in rocks, soils and sediments	281
References.	284
Chapter 4h. Applications of atomic absorption spectrometry in the petroleum industry, by W. C. Campbell.....	285
I. Introduction	285
A. Flame atomisation.....	285
B. Electrothermal atomisation.....	285
II. Sampling.....	286
A. Sample contamination.....	286
B. Reagent impurities	287
C. Sample storage	287
D. Sample preparation	287
III. Standards for petroleum analysis.....	288
IV. Applications	290
A. Crude and residual fuel oils.....	290
1. The determination of metals in crude and residual fuel oil by dilution and flame analysis, 290-2. The determination of metals in crude and residual fuel oils by ashing and flame analysis, 292-	
B. Fuel and gas oils	294
1. The determination of metals in fuel and gas oils by flame analysis, 294-2. The determination of low levels of nickel and vanadium in fuel oils using electrothermal atomisation, 295-	
C. Unused lubricating oils	297
1. The determination of calcium, barium, magnesium and zinc in unused lubricating oil by dilution and flame analysis, 297-	
D. Used lubricating oils	299
1. The determination of wear metals in used lubricating oils, 300-	
E. Gasoline	301
1. The determination of lead in leaded gasoline, 302-2. The determination of lead in lead free gasoline using electrothermal atomisation, 303-3. The determination of manganese in gasoline, 305-	
References.	306

Chapter 4i. Methods for the analysis of glasses and ceramics by atomic spectrometry, by W. M. Wise, J. P. Williams and R. A. Burdo	307
I. Introduction	307
II. Apparatus	307
A. Flame emission and absorption	307
B. Plasma emission	308
III. Chemicals	308
IV. Reagent solutions	308
V. Standards	309
VI. Sample preparation	312
VII. Determination of Li, Na, K, Mg, Ca, Sr, Ba, Al, Fe, Zn, Cd and Pb by AES or AAS	313
A. Procedure for acidic decomposition	313
B. Procedure for fusion	314
C. Measurement of analytes	315
D. Discussion	315
1. Alkalies, 315-2. Alkaline earths, 316-3. Aluminium, 317-4. Iron, 317-5. Zinc and cadmium, 317-6. Lead, 317-	
VIII. Determination of silicon by AAS	317
A. Procedure for sample decomposition and AAS measurement ..	317
B. Discussion	318
IX. Determination of boron by AES	318
A. Procedure for sample decomposition and AES measurement ..	318
B. Discussion	319
References	319
 Chapter 4j. Clinical applications of flame techniques, by B. E. Walker ..	321
I. Introduction	321
II. Sample collection	322
A. Contamination	322
B. Effect of occlusion	323
C. Diurnal variation	324
III. Analysis	324
A. Effect of protein content	324
B. Interference	326
IV. Individual elements	327
A. Calcium	327
1. The determination of calcium in plasma and urine, 328-	
B. Copper	328
1. The determination of copper in plasma and urine, 330-	
C. Iron	330
1. The determination of plasma iron and iron binding capacity, 331-	
D. Lithium	332
1. The determination of lithium in plasma and whole-blood, 332-	

E. Magnesium	333
1. The determination of magnesium in plasma and urine, 333-	
F. Potassium	334
1. The determination of potassium in plasma, 334-	
G. Sodium	335
1. The determination of sodium in plasma, 335-	
H. Zinc.	336
1. The determination of zinc in plasma, whole-blood and urine, 337-	
References.	338

Chapter 4k. Elemental analysis of body fluids and tissues by electro-thermal atomisation and atomic absorption spectrometry by, H. T. Delves.	341
I. Introduction	341
II. Electrothermal atomisation for atomic absorption	341
A. Physical interferences	342
B. Chemical interferences	343
C. Spectral interferences	343
III. Sample preparation for electrothermal atomisation—AAS.	346
A. Diluent solutions for matrix modification.	347
B. Acid extraction of metals from proteins	347
C. Dissolution of tissues.	348
D. Complete oxidation of tissues and fluids.	349
1. Wet and dry ashing, 349-2. Vapour phase and pressure digestion, 350-	
3. Low-temperature ashing, 350-	
IV. Essential trace elements.	351
A. Zinc.	352
B. Copper	353
C. Iron.	355
D. Manganese.	356
E. Selenium	357
F. Chromium	358
G. Molybdenum	359
H. Cobalt	360
I. Vanadium	361
V. Trace metals used therapeutically	362
A. Aluminium	362
B. Gold	364
C. Bismuth.	365
D. Gallium	366
E. Platinum	366
VI. Non-essential, toxic trace elements	367
A. Lead	367
B. Cadmium.	372

C. Nickel	373
D. Beryllium	375
E. Arsenic	375
F. Mercury, antimony, tellurium	376
VII. Conclusion	376
References	377
Chapter 4l. Forensic science, by I. M. Dale	381
I. Introduction	381
II. Biological material and poisoning	382
A. Sampling	382
B. Pretreatment	382
C. Freeze drying	383
D. Low-temperature ashing	383
E. Sample digestion	384
III. Toxic elements	384
A. Arsenic	384
1. Introduction, 384-2. Symptoms, 385-3. Fatal dose, 385-4. Sampling, 386-5. Analytical methods, 386-6. Arsine-entrained air flame, 386-7. Arsine-heated quartz cell, 386-8. Arsenic-heated graphite atomiser, 387-9. Arsenic in human tissue — normal levels, 388-10. Arsenic in human tissue — exposed subjects, 388-	
IV. Gunshot residue analysis	390
A. Introduction	390
B. Cautionary note	392
C. Sampling	392
D. Analysis	394
References	394
Chapter 4m. Fine, industrial and other chemicals, by L. Ebdon	395
I. Introduction	395
II. Chemicals	395
A. Inorganic	395
1. Fine chemicals and analytical reagents, 395-2. Industrial chemicals, 406-	
B. Organic	407
1. Organometallic, 407-2. Impurities in organic compounds, 409-	
C. Phosphors	410
III. Photographic film and chemicals	411
IV. Catalysts	412
V. Semi-conductors	413
VI. Electroplating solutions	414
VII. Cosmetics, detergents and household products	416
VIII. Pharmaceutical products and drugs	417
A. Determination of metallic concentrations of significance	418
B. Determination of impurities	421
C. Indirect methods	423

IX. Fungicides	424
X. Paints and pigments	424
XI. Paper and pulp	427
XII. Textiles, fibres and leather	428
XIII. Polymers and rubber	430
XIV. Nuclear industry	432
XV. Waste materials	433
XVI. Archaeology	434
XVII. Gases	437
XVIII. Isotopes	438
References	440
Index	447
