

1.1	Introduction . . . . .	2
1.1.1	General aspects of extreme trace analysis . . . . .	2
1.1.2	Direct instrumental determination methods . . . . .	3
1.1.3	Multi-stage procedures . . . . .	3
1.1.4	Further general important statements . . . . .	4
1.2	Systematic errors and their avoidance . . . . .	4
1.2.1	Volatilization . . . . .	6
1.2.2	Adsorption . . . . .	7
1.2.3	Blanks from vessels, vessel materials and working tools . .	9
1.2.4	Blanks from the reagents . . . . .	13
1.2.5	Blanks from airborne dust . . . . .	15
1.2.6	Contamination by sample handling . . . . .	18
1.2.7	Problems due to changes of the valency state . . . . .	19
1.3	Systematic errors during the analytical procedure . . . . .	20
1.3.1	Sampling, sample storage and pretreatment . . . . .	20
1.3.2	Decomposition . . . . .	22
1.3.3	Separation . . . . .	27
1.4	Basic rules for the recognition and elimination of systematic errors .	29
1.5	Conclusion . . . . .	31
2.1	Introduction . . . . .	39
2.2	Errors in analytical results . . . . .	40
2.3	Accuracy . . . . .	41
2.4	Measuring trace concentrations . . . . .	42
2.5	The problem of detection . . . . .	42
2.5.1	Random error of blank responses . . . . .	42
2.5.2	Errors of the first kind – the critical level ( <i>a posteriori</i> detection) .	43
2.5.3	Errors of the second kind – the limit of detection ( <i>a priori</i> detection) . . . . .	46
2.5.4	Limits to the use of the definitions of $L_C$ and $L_D$ . . . . .	48
2.5.5	Regression theory approaches to the problem of detection .	50
2.6	Practical applications . . . . .	52
2.7	Reporting results at small concentrations . . . . .	53
2.8	Conclusions and recommendations . . . . .	56
3.1	Introduction . . . . .	59
3.2	Changes in trace element composition . . . . .	62
3.2.1	Element specific changes . . . . .	63
3.2.2	Sample specific changes . . . . .	76
3.3	Pre-sampling considerations . . . . .	77

3.4	Aspects of sampling . . . . .	83
3.4.1	Establishment of analytical control . . . . .	89
3.4.2	Sampling error in a test portion . . . . .	89
3.4.3	Uniformity of laboratory samples . . . . .	92
3.4.4	Uniformity of subsamples . . . . .	93
3.4.5	The gross sample . . . . .	93
3.5	Sample decomposition . . . . .	94
4.1	Separation and preconcentration of trace elements by coprecipitation	110
4.1.1	Introduction . . . . .	110
4.1.2	Mechanism . . . . .	110
4.1.3	Coprecipitation with inorganic precipitants . . . . .	112
4.1.4	Coprecipitation with organic collectors . . . . .	113
4.2	Separation and preconcentration of trace elements by flotation . . . . .	114
4.2.1	Introduction . . . . .	114
4.2.2	Principle . . . . .	116
4.2.3	General procedures . . . . .	117
4.3	Preconcentration and separation of trace elements by solvent extraction	118
4.3.1	Introduction . . . . .	118
4.3.2	Extraction of trace elements . . . . .	121
4.4	Separation and preconcentration of trace elements by ion-exchange .	128
4.4.1	Introduction . . . . .	128
4.4.2	Ion-exchange resins . . . . .	129
4.4.3	Equilibrium and selectivity . . . . .	130
4.4.4	Practical column operation . . . . .	132
4.4.5	Preconcentration . . . . .	133
4.4.6	Ion chromatography . . . . .	134
4.5	Separation and preconcentration by sorption . . . . .	137
4.5.1	Introduction . . . . .	137
4.5.2	Activated carbon . . . . .	137
4.5.3	Porous polymers . . . . .	138
4.5.4	Complex-forming adsorbents . . . . .	140
4.5.5	Natural polymers . . . . .	141
5.1	Introduction . . . . .	146
5.2	Literature . . . . .	147
5.3	Quality of results . . . . .	148
5.4	Standards and chemicals . . . . .	150
5.5	Sample preparation . . . . .	152
5.6	Theory . . . . .	154

5.7	Major components of the instrument . . . . .	155
5.8	Radiation sources . . . . .	156
5.9	Wavelength selection system . . . . .	159
5.10	Atomization by flame . . . . .	164
5.11	Instruments . . . . .	172
5.12	Electrothermal atomization . . . . .	173
5.13	Hydride generation . . . . .	178
5.14	Interferences . . . . .	180
5.15	Instrumental background corrections . . . . .	183
5.16	Modifiers . . . . .	187
5.17	Automation . . . . .	188
6.1	Atomic spectrometry with plasma sources . . . . .	192
6.1.1	Historical development . . . . .	192
6.1.2	Optical emission spectrometry . . . . .	194
6.1.3	Plasma mass spectrometry . . . . .	199
6.2	Plasma sources and sampling . . . . .	201
6.2.1	Arc and spark sources . . . . .	202
6.2.2	Flames . . . . .	203
6.2.3	DC plasma jets . . . . .	204
6.2.4	Inductively coupled plasmas . . . . .	205
6.2.5	Microwave discharges . . . . .	207
6.2.6	Sample introduction for plasma spectrometry . . . . .	209
6.2.7	Discharges under reduced pressure . . . . .	215
6.3	Plasma optical emission spectrometry . . . . .	217
6.3.1	Atomic emission spectrometry . . . . .	217
6.3.2	ICP-Atomic emission spectrometry . . . . .	220
6.3.3	MIP-Atomic emission spectrometry . . . . .	223
6.3.4	Glow discharges . . . . .	224
6.3.5	Conclusion . . . . .	226
6.4	Plasma mass spectrometry . . . . .	226
6.4.1	ICP mass spectrometry . . . . .	227
6.4.2	Glow discharge mass spectrometry . . . . .	239
6.5	Conclusion . . . . .	241
6.5.1	Power of detection . . . . .	241
6.5.2	Interferences . . . . .	242
6.5.3	Economic aspects . . . . .	243
7.1	Introduction . . . . .	254
7.2	Basic nuclear physics . . . . .	255

7.2.1	Nuclides . . . . .	255
7.2.2	Radioactive decay . . . . .	256
7.2.3	Kinetics of decay of radioactive nuclides . . . . .	260
7.2.4	Kinetics of formation of radioactive nuclides by irradiation . . . . .	261
7.2.5	The chart of the nuclides . . . . .	265
7.3	Gamma detection systems . . . . .	267
7.3.1	NaI(Tl) – scintillation detector . . . . .	268
7.3.2	Solid-state ionization detector . . . . .	268
7.3.3	The shape of $\gamma$ spectrum . . . . .	273
7.4	Irradiation . . . . .	278
7.4.1	Neutron sources . . . . .	278
7.4.2	Samples introduction . . . . .	279
7.5	Instrumental neutron activation analysis (INAA) . . . . .	280
7.5.1	Techniques . . . . .	280
7.5.2	Calculation . . . . .	280
7.5.3	Nuclear interferences . . . . .	284
7.5.4	A test case – INAA of trace elements in silicon . . . . .	285
7.5.5	Epithermal INAA . . . . .	288
7.5.6	Fast neutrons INAA . . . . .	296
7.5.7	Cyclic INAA . . . . .	299
7.5.8	Prompt Gamma Neutron Activation Analysis (PGNAA) . .	301
7.5.9	Depth profiling by INAA . . . . .	302
8.1	Introduction . . . . .	309
8.2	Samples dissolution . . . . .	312
8.2.1	Geological samples . . . . .	312
8.2.2	Metal samples . . . . .	312
8.2.3	Biological samples . . . . .	313
8.3	Radiochemical separations . . . . .	316
8.3.1	Radiochemical separations in material sciences . . . . .	317
8.3.2	RNAA of geological and environmental samples . . . . .	326
8.3.3	RNAA of biological samples . . . . .	340
9.1	Introduction . . . . .	359
9.2	General review of X-ray photoelectron and auger electron spectroscopies . . . . .	362
9.2.1	Basic principles . . . . .	363
9.2.2	Surface sensitivity and depth profiling . . . . .	369
9.2.3	Chemical-state information . . . . .	374
9.2.4	Quantitative analysis . . . . .	375
9.3	XPS/AES applications in trace element determination . . . . .	384

9.4	Summary and conclusions . . . . .	389
10.1	Introduction . . . . .	393
10.2	Anodic and cathodic stripping voltammetry . . . . .	394
10.2.1	Electrodes . . . . .	395
10.2.2	Stripping waveforms . . . . .	397
10.2.3	Film stripping . . . . .	399
10.2.4	Cathodic stripping . . . . .	400
10.2.5	Interferences . . . . .	400
10.3	Non-stripping methods . . . . .	405
10.4	Potentiometric stripping . . . . .	405
10.5	Adsorptive stripping voltammetry . . . . .	408
10.6	Conclusion . . . . .	416
11.1	Introduction . . . . .	426
11.2	Analytical information from interfaced chromatography with specific element detection . . . . .	427
11.2.1	Interelement selectivity . . . . .	428
11.2.2	Elemental sensitivity and limits of detection . . . . .	428
11.2.3	Dynamic measurement range . . . . .	428
11.3	Element-selective gas chromatographic detection . . . . .	429
11.3.1	Non-spectroscopic detectors . . . . .	429
11.3.2	The Flame Photometric Detector (FPD) . . . . .	431
11.3.3	Atomic spectroscopic detectors . . . . .	431
11.3.4	Flame emission detection . . . . .	432
11.3.5	Atomic absorption detection . . . . .	432
11.3.6	Atomic plasma emission spectroscopy (APES) . . . . .	433
11.4	Classes of atomic plasma emission chromatographic detectors . . . . .	434
11.4.1	The microwave-introduced electrical discharge plasma (MIP) detector . . . . .	434
11.4.2	The Inductively Coupled Plasma (ICP) discharge . . . . .	435
11.4.3	The Direct-Current Plasma (DCP) discharge . . . . .	435
11.4.4	The Alternating-Current Plasma (ACP) discharge . . . . .	436
11.4.5	The Capacitively Coupled Plasma (CCP) discharge . . . . .	436
11.4.6	The plasma electrodeless discharge afterglow . . . . .	436
11.5	The plasma-chromatograph interface . . . . .	436
11.5.1	Gas chromatographs . . . . .	436
11.6	Analytical GC applications . . . . .	438
11.6.1	GC-AED detection of non-metallic elements . . . . .	438
11.6.2	GC-MIP detection . . . . .	444

11.6.3	GC-DCP and ICP detection . . . . .	448
11.7	Liquid chromatographic applications . . . . .	448
11.7.1	HPLC-ICP detection . . . . .	448
11.7.2	HPLC-DCP detection . . . . .	450
11.7.3	HPLC-MIP detection . . . . .	451
11.8	Supercritical fluid chromatographic (SFC) applications . . . . .	452
11.9	Chromatographic detection by plasma-mass spectrometry . . . . .	453
11.9.1	HPLC-plasma mass spectrometry (MS) . . . . .	453
11.9.2	GC-plasma mass spectrometry . . . . .	454
11.10	Future directions for trace analysis . . . . .	455
12.1	Introduction . . . . .	462
12.1.1	Purpose . . . . .	462
12.1.2	Definition . . . . .	463
12.1.3	Inventarisation . . . . .	463
12.1.4	Organization of this chapter . . . . .	471
12.2	Principles of radiotracer methods . . . . .	471
12.2.1	Basic equations of radiotracer experiments in a closed system and their applications . . . . .	471
12.2.2	Isotopic exchange in one phase . . . . .	474
12.2.3	Isotopic exchange between a solid and an aqueous solution in a closed system . . . . .	474
12.2.4	Net mass transport in a closed system . . . . .	476
12.2.5	Combination of net mass transport and isotopic exchange in a closed system . . . . .	477
12.2.6	Conclusion . . . . .	478
12.3	Spatial (surface) speciation by nuclear techniques . . . . .	479
12.3.1	Survey . . . . .	479
12.3.2	Ion-beam applications . . . . .	479
12.3.3	Thermal neutron depth profiling . . . . .	485
12.3.4	Depth profiling by activation analysis . . . . .	488
12.3.5	Proton induced X-ray analysis (PIXE) and proton induced $\gamma$ -ray spectrometry (PIGE) . . . . .	489
12.3.6	Depth profiling by radiotracer methods . . . . .	490
12.4	Phase speciation and the use of radioanalysis . . . . .	493
12.4.1	Survey . . . . .	493
12.4.2	Sampling and separation of sea- and surface water and the determination of trace elements in the isolated fractions . . . . .	495
12.4.3	Determination of exchangeable phosphate in fresh water sediments . . . . .	499

12.4.4	Leaching experiments on granular solids by means of radio-tracers and a previously radioactivated aliquot . . . . .	499
12.4.5	Measurement of the in situ diffusion coefficient and distribution constant in (partly) wetted soils and granular wastes . .	501
12.5	Chemical speciation of trace elements . . . . .	504
12.5.1	Survey . . . . .	504
12.5.2	Radiometric determination of conditional extraction constants	510
12.5.3	Trace element speciation in human serum . . . . .	513
12.5.4	A case in point: Arsenic speciation in aqueous samples by selective As(III)/As(V) preconcentration and hydride evaporation AAS . . . . .	518
13.1	Introduction . . . . .	544
13.2	Need for trace element analysis of biomaterials . . . . .	545
13.2.1	BTER, a multi-disciplinary science . . . . .	546
13.2.2	Trace element speciation and bioavailability . . . . .	548
13.3	Biological standardization . . . . .	549
13.3.1	The "Bio" sources of analytical errors . . . . .	549
13.3.2	Presampling factors . . . . .	550
13.4	Analytical standardization . . . . .	556
13.4.1	Analytical quality assurance . . . . .	557
13.4.2	Harmonization of measurements . . . . .	559
13.4.3	Trace element determinations . . . . .	559
13.4.4	Multianalyte determinations . . . . .	559
13.4.5	Matrix related problems in sample treatment . . . . .	560
13.4.6	Sample preservation and storage . . . . .	560
13.4.7	Contamination by trace elements . . . . .	562
13.4.8	Losses of trace elements . . . . .	562
13.5	Clinical specimens from human subjects . . . . .	563
13.5.1	Special features of biofluids . . . . .	563
13.5.2	Medico-legal implications . . . . .	564
13.5.3	Sampling and preparation . . . . .	565
13.6	Environmental biomonitoring for toxicants . . . . .	567
13.6.1	Chemicals in the environment . . . . .	567
13.6.2	Bioenvironmental surveillance . . . . .	570
13.6.3	Real time and long-term biomonitoring . . . . .	571
13.6.4	Human specimens for biomonitoring . . . . .	571
13.6.5	Environmental Specimen Bank (ESB) . . . . .	572
13.6.6	Proven applications of ESB . . . . .	574

13.7	Biomineral imbalances and health effects . . . . .	575
13.7.1	Nutritional and metabolic factors . . . . .	575
13.7.2	Nutritional surveillance of trace elements . . . . .	576
13.7.3	Recommended dietary allowances (RDA) . . . . .	576
13.8	Trace elements and high altitude populations . . . . .	577
13.8.1	Iodine and selenium . . . . .	579
13.9	Reference values for trace elements in human specimens . . . . .	580
13.9.1	Reference values vs normal values . . . . .	580
13.9.2	Reference concentrations in clinical specimens . . . . .	580
13.9.3	Trace element content in Reference Man . . . . .	581
13.10	Reference parameters for data interpretation . . . . .	586
13.11	The future . . . . .	586
