

Contents

1 Environmental chemistry: a global perspective	1
1.1 The subject matter of this book	5
1.2 Environmental composition	8
1.3 Chemical processes	12
1.4 Anthropogenic effects	16
The main points	18
Additional reading	18
Problems	18
Notes	19

Part A The Earth's atmosphere 21

2 The Earth's atmosphere	23
2.1 Regions of the atmosphere	24
2.2 Reactions and calculations in atmospheric chemistry	29
The main points	38
Additional reading	39
Problems	39
Notes	41
3 Stratospheric chemistry—ozone	42
3.1 Oxygen-only chemistry—formation and turnover of ozone	45
3.2 Catalytic decomposition processes of ozone	47
3.3 Null and holding cycles	55
3.4 Antarctic and Arctic 'ozone hole' formation	57
The main points	61
Additional reading	61
Problems	62
Notes	63
4 Tropospheric chemistry—smog	64
4.1 Smog	64
4.2 Photochemical smog	66
4.3 Exhaust gases from the internal combustion engine	77
The main points	88
Additional reading	88
Problems	88
Notes	89

5 Tropospheric chemistry—precipitation	90
5.1 The composition of rain	90
5.2 Atmospheric production of nitric acid	93
5.3 Atmospheric production of sulfuric acid	94
5.4 Acidifying agents in rain	100
5.5 Rain, snow, and fog chemistry	102
5.6 The global picture—sources and sinks	105
5.7 Control of anthropogenic nitrogen and sulfur emissions	109
The main points	112
Additional reading	113
Problems	113
Notes	114
6 Atmospheric aerosols	115
6.1 Sea spray	118
6.2 Dust	119
6.3 Combustion products	120
6.4 Condensation aerosols	122
6.5 Aerosol concentrations and lifetimes	126
6.6 Air pollution control for particulate emissions	129
The main points	131
Additional reading	132
Problems	132
Notes	133
7 Chemistry of urban and indoor atmospheres	134
7.1 Pollutants in the urban atmosphere	135
7.2 Mexico City	138
7.3 Indoor air quality	141
The main points	152
Additional reading	152
Problems	152
Notes	153
8 The chemistry of global climate	154
8.1 Composition of the Earth's atmosphere	154
8.2 Energy balance	156
8.3 The greenhouse gases and aerosols	161
8.4 Relative importance of the changes in greenhouse gas concentrations	167
8.5 Energy resources	169
8.6 Greenhouse gases associated with use of carbon-based fuels	172
The main points	181
Additional reading	181
Problems	182
Notes	183

Part B The hydrosphere	185
9 The hydrosphere	187
9.1 Physical and chemical properties of water	190
The main points	196
Additional reading	196
Problems	197
10 Distribution of species in aquatic systems	199
10.1 Single-variable diagrams	200
10.2 Two-variable diagrams: pE/pH diagrams	206
10.3 Measurements of pE	219
The main points	220
Additional reading	220
Problems	221
Notes	223
11 Gases in water	224
11.1 Simple gases	224
11.2 Gases that react with water	226
The main points	236
Additional reading	237
Problems	237
12 Organic matter in water	239
12.1 Origins of organic matter in water	240
12.1 Environmental issues related to aqueous organic matter	242
12.3 Humic material	253
The main points	254
Additional reading	255
Problems	255
Note	257
13 Metals in the hydrosphere	258
13.1 Aquo complexes of metals	259
13.2 Classification of metals	261
13.3 Three metals—their behaviour in the hydrosphere	270
13.4 Metal complexes with ligands of anthropogenic origin	275
13.5 Suspended matter in the hydrosphere	279
The main points	279
Additional reading	280
Problems	280
Notes	281

14 Environmental chemistry of colloids and surfaces	282
14.1 Surface properties of colloidal materials	284
14.2 Quantitative descriptions of adsorption—I	291
14.3 Phosphorus environmental chemistry	295
14.4 Quantitative descriptions of adsorption—II	301
14.5 Partitioning of small organic solutes between water and soil or sediment	303
14.6 Colloidal material in the natural environment	310
The main points	316
Additional reading	317
Problems	317
Notes	318
15 Microbiological processes	319
15.1 Classification of microorganisms	320
15.2 Microbiological processes—the carbon cycle	325
15.3 Microbiological processes—the nitrogen cycle	337
15.4 Microbiological processes—the sulfur cycle	343
The main points	346
Additional reading	347
Problems	347
Note	348
16 Water pollution and waste-water treatment chemistry	349
16.1 Community waste-water treatment chemistry	353
16.2 Biological processes for removal of phosphorus and nitrogen from waste water	361
16.3 Anaerobic digestion of sludge	363
The main points	364
Additional reading	364
Problems	364
Notes	365

Part C The terrestrial environment 367

17 The terrestrial environment	369
17.1 Soil formation	370
The main points	379
Additional reading	379
Problems	379
Note	379

18 Soil properties	380
18.1 Physical properties	380
18.2 Chemical properties	384
18.3 Soil profiles	390
18.4 Environmental properties of soils	395
<i>The main points</i>	408
Additional reading	408
Problems	408
Notes	410
19 The chemistry of solid wastes	412
19.1 Solid wastes from mining and metal production	413
19.2 Organic wastes	418
19.3 Mixed urban wastes	426
The main points	434
Additional reading	435
Problems	435
Notes	437
20 Organic biocides	438
20.1 Chemical stability	440
20.2 Mobility	455
20.3 Leachability	460
The main points	462
Additional reading	463
Problems	463
Notes	464
21 The future earth	465
Appendices	471
Appendix 1 Properties of the Earth	471
Appendix 2 Infrared absorption spectrum of CFC-12	471
Appendix 3 The elements	472
Appendix 4 Properties of air and water	476
Appendix 5 Area, biomass, and productivity of ecosystem types	476
Appendix 6 SI prefixes	477
Appendix 7 Fundamental constants	477
Appendix 8 Thermochemical properties of selected elements and compounds	478
Appendix 9 Mean bond enthalpies $\Delta H/\text{kJ mol}^{-1}$ at 298 K	481
Appendix 10 Dissociation constants for acids and bases in aqueous solutions at 25°C	482
Appendix 11 Standard redox potentials in aqueous solutions	484
Index	485
