

# Contents

<b>List of Contributors</b> . . . . .	xi
<b>Preface</b> . . . . .	xiii
<b>Introduction</b> . . . . .	1
<b>Chapter 1 General Behaviour and Origins of Greenhouse and Significant Trace Gases</b> . . . . .	3
1 Units for Quantities of Trace Gases . . . . .	3
2 Atmospheric Lifetimes of Gases . . . . .	3
3 Global Warming Potentials . . . . .	4
4 Carbon Dioxide; CO <sub>2</sub> ; [CAS 124-38-9] . . . . .	5
5 Carbon Monoxide; CO; [CAS 630-08-0] . . . . .	6
6 Volatile Organic Compounds (VOC) . . . . .	6
7 Nitric Oxide; NO; [CAS 10102-43-9] and Nitrogen Dioxide; NO <sub>2</sub> ; [CAS 10102-44-0] . . . . .	6
8 Nitrous Oxide; N <sub>2</sub> O; [CAS 10024-97-2] . . . . .	7
9 Methane; CH <sub>4</sub> ; [CAS 74-82-8] . . . . .	8
10 Hydrofluorocarbons . . . . .	8
11 Perfluorocarbons, Sulfur Hexafluoride and Trifluoromethyl Sulfur Heptafluoride . . . . .	8
12 Hydroxyl Radicals; HO; [CAS 3352-57-6] . . . . .	10
13 Ozone; O <sub>3</sub> ; [CAS 10028-15-6] . . . . .	10
14 Variation of the Nature of the Atmosphere with Altitude . . . . .	11
References . . . . .	17
<b>Chapter 2 Presentation of Solubility Data: Units and Applications</b> . . . . .	19
1 Units . . . . .	22
2 Aqueous-phase Solubility Equilibria . . . . .	25
3 Effective Henry's Law Coefficients . . . . .	28
4 Partition Equilibria in Liquid-water Clouds . . . . .	30
5 Expressions for Abundance of Materials in Multi-phase Systems . . . . .	31
6 Mass Accommodation and Interfacial Mass-transport Rates . . . . .	32

7	Coupled Mass Transfer and Aqueous-phase Reaction . . . . .	32
8	Rates of Multi-phase Reactions in Liquid-water Clouds . . . . .	37
9	Departure from Phase Equilibrium at Air–Water Interface . . . . .	38
10	Dry Deposition of Gases to Surface Water . . . . .	39
11	Conclusions . . . . .	40
	References . . . . .	41
<b>Chapter 3</b>	<b>Thermodynamic Aspects of Henry’s Law . . . . .</b>	<b>43</b>
1	Henry’s Law and Raoult’s Law . . . . .	43
2	Thermodynamic Quantities from Henry’s Law Constants . . . . .	45
3	How Dilute is ‘Dilute’? . . . . .	46
4	Henry’s Law Constant and Other Measures of Solubility . . . . .	48
5	Henry’s Law Constant and the Infinite Dilution Activity Coefficient, $\gamma^\infty$ . . . . .	49
6	Uses of Henry’s Law Constant and Infinite Dilution Activity Coefficient . . . . .	49
	References . . . . .	51
<b>Chapter 4</b>	<b>The Experimental Measurement of Henry’s Law Constant . . . . .</b>	<b>53</b>
1	Henry’s Law Constant . . . . .	53
2	Activity Coefficient at Infinite Dilution ( $\gamma^\infty$ ) . . . . .	63
	References . . . . .	66
<b>Chapter 5</b>	<b>Calculation of Henry’s Law Constants and Infinite Dilution Activity Coefficients – An Overview . . . . .</b>	<b>69</b>
1	Calculation from First Principles . . . . .	71
2	Calculation from ‘Whole Molecule’ Properties . . . . .	71
3	Methods Based on Scaled Particle Theory . . . . .	72
4	Methods Based on Solubility Parameters . . . . .	73
5	UNIQUAC, UNIFAC, ASOG, NRTL and Wilson Equations . . . . .	75
6	Additive/Constitutive Bond and Group Contribution Methods . . . . .	77
7	Other Methods of Calculation . . . . .	77
8	Critique of Estimation Methods . . . . .	78
	References . . . . .	80

<b>Chapter 6</b>	<b>Details of Specific Methods of Predicting the Solubility of Organic Compounds in Water</b>	85
1	General Principles	85
2	Estimation from Water–Hexadecane Partition Coefficients	86
3	Linear Solvation Energy Relationships	87
4	The Methods Developed by Hine and Mookerjee	88
5	Developments by Meylan and Howard	90
6	Other Methods Dependent upon Linear Quantitative Structure–Property Relationships	95
7	Use of Neural Networks to Predict Henry's Law Constants	97
	References	98
<b>Chapter 7</b>	<b>Solubility of Gases in Strong Electrolyte Solutions</b>	101
1	Distribution of Strong Electrolytes	101
2	Solubility of Gases in Salt Solutions	101
3	Thermodynamic Methods of Estimating the Solubility of Gases in Electrolyte Solutions	104
4	The Aerosol Inorganics Model Project	114
5	Other Programs Available for Predicting Equilibria in Electrolyte Solutions	120
	References	124
<b>Chapter 8</b>	<b>Details and Measurement of Factors Determining the Uptake of Gases by Water</b>	127
1	The Uptake of Gas Molecules by Condensed Phases	128
2	Experimental Methods of Measuring the Uptake of Gases	133
2.1	Bubble Column	135
2.2	Knudsen Cell	138
2.3	Wetted Wall Flow Tube	139
2.4	Droplet Train Flow Tube	140
2.5	Bubble Train	141
2.6	Entrained Aerosol Flow Tube	141
2.7	Aerosol Chamber Techniques	143
2.8	Liquid Jet	143
2.9	Impinging Flow	143
2.10	Cavity Resonances in Microparticles	143
3	The Mass Accommodation of Water Vapour on Pure Water and Aqueous Solutions	143
	References	145

<b>Chapter 9</b>	<b>Accommodation Coefficients, Uptake Coefficients and Henry's Law Constants of Gases which React with Water or are Unstable</b>	147
1	Oxygen, Ozone, HOx Compounds and Carbon Dioxide	147
2	C, H, O Compounds—Formaldehyde, Acetaldehyde and Acetone	150
3	Other Environmentally Important Aldehydes	157
4	Methyl Hydroperoxide, CH <sub>3</sub> O <sub>2</sub> H, [CAS 3031-73-0], Ethyl Hydroperoxide, C <sub>2</sub> H <sub>5</sub> O <sub>2</sub> H [CAS 3031-74-1] and Other Organic Peroxides	161
5	Carboxylic Acids	161
6	Halogens and Compounds Containing Halogens	165
7	Nitrogen Compounds	181
8	Compounds Containing Sulfur	203
9	Recent Critical Evaluations of Solubility Data for Important Reactions	212
	References	212
	Addendum I: Henry's Law Constants of OH and HO <sub>2</sub>	219
1	OH [CAS 3352-57-6]	220
2	HO <sub>2</sub> [CAS 3170-83-0]	221
	References	223
	Addendum II: The Solubility of Ozone in Water	225
1	Comments	225
2	Data Evaluation	227
	References	228
<b>Chapter 10</b>	<b>Solid Particulates and Surface Reactions in the Atmosphere</b>	229
1	Primary Solid Particulates	230
2	Secondary Solid Particulates	231
3	Reactions on the Surface of Solid Particulates	234
	References	249
<b>Chapter 11</b>	<b>Henry's Law Constants for Compounds Stable in Water</b>	255
1	Simple Gases above their Critical Temperatures	255
2	Gases, Liquids and Solids for which Water Solubility is the only or most Reliable or most Extensive Type of Data Available	256
3	Compounds for which Both Reliable Solubility and Extensive Experimental Measurements are Available	256

4	Compounds for Which Only Experimental Measurements (Apart from Solubility) are Available . . . . .	256
5	General Remarks . . . . .	256
6	Presentation of Data . . . . .	257
7	Symbols and Glossary . . . . .	257
8	Method Descriptors (Chapters 3 and 4) . . . . .	258
9	Calculation of $k_H$ by the VP/AS Method for Solid Compounds . . . . .	258
10	Henry's Law Constants for Elements and Inorganic Compounds . . . . .	258
11	Henry's Law Constants for Organic Compounds (C <sub>1</sub> ) . . . . .	273
12	Henry's Law Constants for Organic Compounds (C <sub>2</sub> –C <sub>9</sub> ) . . . . .	294
13	Henry's Law Constants for Organic Compounds (C <sub>10</sub> –C <sub>20</sub> ) . . . . .	366
	References . . . . .	392
<b>Chapter 12</b>	<b>Henry's Law Constants for Dissolution in Seawater . . .</b>	<b>399</b>
1	Seawater . . . . .	399
2	Physical Chemistry of Solutes in Seawater . . . . .	400
3	Henry's Law Constant . . . . .	402
4	Treatment of Data . . . . .	402
5	Evaluations . . . . .	403
6	Solubility Data . . . . .	404
	References . . . . .	426
<b>Appendix I</b>	<b>A Selection of Sources of Additional Data Currently Available from the Internet . . . . .</b>	<b>427</b>
<b>Appendix II</b>	<b>Dissolution of Carbon Dioxide and of Oxygen and Fractionation of Oxygen Isotopes in the Environment . . . . .</b>	<b>431</b>
<b>CAS Registry Index . . . . .</b>		<b>435</b>
<b>Subject Index . . . . .</b>		<b>439</b>
