

CONTENTS

PREFACE	xi
1 INTRODUCTION	1
1.1 Background / 1	
1.2 Notation for Chemical Transport / 4	
1.3 Simplifications for Environmental Systems / 7	
1.4 Review of Mass Balances / 13	
References / 23	
2 EQUILIBRIUM CALCULATIONS	24
2.1 Introduction / 24	
2.2 Thermodynamic State Functions / 28	
2.3 Chemical Potentials / 29	
2.4 Gibbs Free Energy and Equilibrium Constants / 33	
2.5 Distribution of Chemicals Based on Fugacities / 35	
References / 57	
3 DIFFUSIVE TRANSPORT	58
3.1 Introduction / 58	
3.2 Diffusion / 58	

3.3	Calculation of Molecular Diffusion Coefficients / 60	
3.4	Experimental Determination of Diffusivities / 81	
	References / 109	
4	THE CONSTITUTIVE TRANSPORT EQUATION	111
4.1	Introduction / 111	
4.2	Derivation of the General Transport Equation / 112	
4.3	Special Forms of the General Transport Equation / 114	
4.4	Similarity of Mass, Momentum, and Heat Dispersion Laws / 117	
4.5	Transport Relative to a Fixed or Moving Coordinate System / 120	
4.6	Special Forms of the Constitutive Transport Equation / 123	
4.7	The Constitutive Transport Equation in Spherical and Cylindrical Coordinates / 125	
5	CONCENTRATION PROFILES AND CHEMICAL FLUXES	130
5.1	Introduction / 130	
5.2	The Three Theories of Mass Transport / 130	
5.3	Mass Transport in Radial and Cylindrical Coordinates Using Shell Balances / 153	
	References / 164	
6	MASS TRANSPORT COEFFICIENTS: FROM THEORY TO EMPIRICISM	165
6.1	Definition of a Mass Transport Coefficient / 165	
6.2	The Three Theories / 166	
6.3	Multiple Resistances During Interphase Mass Transport / 171	
6.4	Empirical Correlations for Mass Transport Coefficients / 180	
6.5	Mass, Energy, and Momentum Transport Analogies / 186	
	References / 192	
7	CHEMICAL TRANSPORT IN SHEARED REACTORS	193
7.1	Introduction / 193	
7.2	Fluid Shear and Turbulence / 194	
7.3	Mass Transport Correlations for Sheared Systems (General) / 200	
7.4	Mean Shear Rates in Reactors / 204	
7.5	Maximum Size of Aggregates in Sheared Fluids / 215	
7.6	Chemical Transport from Bubbles / 220	
	References / 229	

8 SUSPENDED UNATTACHED AND AGGREGATED MICROORGANISMS	231
8.1 Introduction / 231	
8.2 Chemical Transport to Cells at Rest / 231	
8.3 Effect of Fluid Motion on Microorganisms / 235	
8.4 Transport to Microbial Aggregates / 241	
8.5 Effectiveness Factors for Mass Transport / 252	
8.6 Relative Uptake Factors for Mass Transport / 255	
References / 262	
9 BIOFILMS	263
9.1 Introduction / 263	
9.2 Transport in the Fluid Layer above a Biofilm / 264	
9.3 Biofilm Kinetics / 271	
9.4 Bioreactor Modeling / 287	
9.5 Recent Developments in the Study of Biofilms / 325	
References / 331	
10 DISPERSION	333
10.1 Introduction / 333	
10.2 Averaging Properties to Derive Dispersion Coefficients in Turbulent Fluids / 337	
10.3 Dispersion in Nonbounded Turbulent Sheared Fluids / 342	
10.4 Longitudinal Dispersion Coefficients for Defined Systems / 348	
10.5 Dispersion in Porous Media / 358	
References / 375	
11 RIVERS, LAKES, AND OCEANS	377
11.1 Introduction / 377	
11.2 Chemical Transport in Rivers / 378	
11.3 Mixing in Lakes / 390	
11.4 Mixing in Estuaries / 395	
11.5 Mixing in the Ocean / 396	
11.6 Transport of Chemicals Present as Pure Phases / 399	
References / 410	
12 CHEMICAL TRANSPORT IN POROUS MEDIA	412
12.1 Introduction / 412	
12.2 Porous Media Hydraulics / 412	
12.3 Contaminant Transport of Conservative Tracers / 415	
12.4 Transport with Reaction / 418	

12.5	Transport with Chemical Adsorption / 423	
12.6	Formation of Ganglia of Non-Aqueous Phase Liquids / 432	
12.7	Mass Transport Calculations of Chemical Fluxes from NAPL Ganglia / 444	
	References / 464	
13	PARTICLES AND FRACTALS	466
13.1	Introduction / 466	
13.2	Solid Particles and Fractal Aggregate Geometries / 467	
13.3	Particle Size Spectra / 485	
13.4	Measuring Particle Size Distributions / 490	
13.5	Calculating Fractal Dimensions from Particle Size Distributions / 493	
	References / 503	
14	COAGULATION IN NATURAL AND ENGINEERED SYSTEMS	505
14.1	Introduction / 505	
14.2	The General Coagulation Equations: Integral and Summation Forms / 506	
14.3	Factors Affecting the Stability of Aquasols / 507	
14.4	Coagulation Kinetics: Collision Kernels for Spheres / 519	
14.5	Fractal Coagulation Models / 536	
14.6	Coagulation in the Ocean / 549	
	References / 562	
15	PARTICLE TRANSPORT IN POROUS MEDIA	564
15.1	Introduction / 564	
15.2	A Macroscopic Particle Transport Equation / 565	
15.3	Clean-Bed Filtration Theory / 568	
15.4	Discrete Particle Size Distributions Prepared by Filtration / 584	
15.5	The Dimensionless Collision Number / 594	
15.6	Pressure Drops in Filters / 597	
15.7	Filter Ripening, Blocking, and Clogging / 599	
15.8	Particle Transport in Groundwater Aquifers / 604	
	APPENDIXES	
1	Notation / 614	
2	Transport Equations / 622	
3	Chemical Properties / 625	
4	Mathematical Functions and Solution Techniques / 636	
	INDEX	649
