

Contents

<i>Part I</i>		<i>1</i>
<i>Chapter 1</i>	<i>Evolution, Populations, and Natural Selection</i>	<i>3</i>
	Species and Populations	3
	Origin of Terrestrial Life	5
	The Concept of Natural Selection	7
	Evolution	14
	The Constraints of Evolution	16
	What Evolution Is Not	19
<i>Chapter 2</i>	<i>The Scientific Method</i>	<i>23</i>
	Acquisition of Knowledge	23
	The Structure of the Scientific Method	25
	Necessary Components of a Hypothesis	29

<i>Chapter 3</i>	<i>The Theory of Evolution by Natural Selection</i>	33
	Evolution by Natural Selection: The Problem and the Facts	34
	Minimum Conditions Necessary for	
	Evolution by Natural Selection	36
	Reproduction	36
	Correlation between probability of	
	survival and phenotype	37
	Inheritance	38
	Environmental uniformity	40
	Sources of Variability	41
	On the Nature of the Theory of Natural Selection	43

Part II 45

<i>Chapter 4</i>	<i>Inheritance and the Sources of Variation</i>	47
	Particulate and Blending Inheritance	48
	The Theory of Pangenesis	49
	Germ Line and Somatic Line	49
	The Particulate Theory of Inheritance	52
	Single Genes and Multiple Gene Systems	56
	Epistasis and Pleiotropy	63
	Genes, Genotypes, and Phenotypes	66
	The Hardy-Weinberg Law and the	
	Maintenance of Variation	70
	Phenotypic Variation and Heritability	72

<i>Chapter 5</i>	<i>Genes and Chromosomes</i>	79
	Chromosomal Characters	80
	Ultrastructure of the Chromosome	81
	Chromosome Number	85
	Mitosis and Meiosis	90
	Linkage and Crossing Over	94
	Linkage disequilibrium	97
	Changes in Chromosomal Structure	102
	Haploidy, Diploidy, and Polyploidy	107
	Mendelian Inheritance in Tetraploids	113
	Summary	115

<i>Chapter 6</i>	<i>Evolutionary Forces</i>	117
	Mutation	119
	Gene Flow	122
	Recombination	126
	Recombinational Distortion	132
	Meiotic drive	132

	Selection	133
	The evolution of resistance to pesticides in insects	135
	Calculation of Fitness in a Population	140
	Selection against double recessive	142
	Selection on Phenotypic Traits	143
	Mutation and Selection	148
	Complete Elimination of Recessives	151
	The Fundamental Theorem of Natural Selection	154
	Random Phenomena	156
	Summary	156
<i>Chapter 7</i>	<i>Inbreeding and Random Genetic Drift</i>	159
	Random Breeding	159
	Chance Loss of Alleles in a Population	163
	Population subdivision and the Wahlund formulas	164
	Inbreeding	168
	Inbreeding coefficient	170
	Inbreeding in human populations	174
	Effective Population Number	175
	Random Genetic Drift	176
<i>Chapter 8</i>	<i>Recombination</i>	183
	Factors Affecting Recombination	183
	Classification of Recombination Systems	188
	Genetic Costs and the Concept of Genetic Load	189
	Is the concept of genetic load valid?	193
	Energy costs of outbreeding	194
	Meiotic cost	194
	Benefits from outcrossing	195
	Recombinational Distortion	197
	Coadaptation	198
	Evolution of industrial melanism	200
	Summary and Conclusions	203
<i>Chapter 9</i>	<i>Genetic Variability in Natural Populations</i>	205
	Patterns of Genetic Variation in	
	Population of Plants and Animals	206
	Color Polymorphism of Natural Populations of the	
	Snail <i>Cepaea nemoralis</i>	211
	Chromosomal Inversion Polymorphisms in <i>Drosophila</i>	216
	Genotypic Variation	220
	The technique of gel electrophoresis	221
	How to measure allozyme variation in populations	227

Genetic Variation in Different Species of	
Plants and Animals	228
Single-gene heterosis	231
Selection in favor of heterozygotes	236
Selection in a variable environment	238
Neutral Variation	241
Summary and Conclusions	242

Part III 247

<i>Chapter 10</i>	<i>Individuals, Populations, and Species</i>	249
	Genotype and Phenotype	250
	The Levels of Organization of Life	251
	The Units of Selection	253
	Gametic selection	253
	Kin selection	254
	Group selection	256
	Sexual selection	256
	Cultural revolution	258
	The Species	259
	The concept of the species	259
	Higher categories	260
<i>Chapter 11</i>	<i>Models of Speciation</i>	265
	Modes of Speciation	266
	Allopatric speciation	267
	Parapatric speciation	279
	Sympatric speciation	282
	Abrupt speciation	284
<i>Chapter 12</i>	<i>Hybridization, Preadaptation, and Adaptation</i>	291
	Hybridization	292
	Effect of hybridization and introgression:	
	the sunflower example	295
	Isolation Mechanisms	299
	The Process of Speciation and the Forces That Control It	304
	Species Definition	310
	Preadaptation and the Origin of Evolutionary Novelties	310
	Adaptation	312
	Are adaptive characters optimal?	313
<i>Chapter 13</i>	<i>Population Growth and Regulation</i>	317
	Population Growth	319
	Exponential growth	319
	Logistic growth	321

	Demography	327
	Survivorship schedule	327
	Fecundity schedule	329
	Net reproductive rate	330
	Stable age distribution	336
	Reproductive value	339
	Density	339
	Population Regulation	341
	Density-Dependent and Density-Independent Mortality	344
	Demography and Natural Selection	347
<i>Chapter 14</i>	<i>Competition and Niche Theory</i>	355
	Competition	356
	Models of competition and two-species growth	358
	The Concept of the Niche	373
<i>Chapter 15</i>	<i>Noncompetitive Species Interactions</i>	381
	Predator-Prey Interactions	382
	Warning coloration and the evolution of mimicry	393
	Symbiosis	397
	Species Interactions and Life History Parameters	399
	Adaptive advantages of parental care	404
<i>Chapter 16</i>	<i>Behavior and Evolution</i>	409
	Adaptiveness of Behavior	411
	Heritability of Behavior	415
	Social Behavior	417
	Social Organization	418
	Territory	418
	Dominance	421
	Sexual Selection and Mating Systems	423
	Conclusion	424
<i>Chapter 17</i>	<i>Paleontology and Evolution</i>	427
	Importance of Fossils in Evolutionary Studies	428
	How Fossils Are Formed	430
	The Problem of the Missing Parts	433
	Dating Fossils: Relative and Absolute Ages	433
	The Molecular Clock of Evolution	434
	The Concept of Species in Time and Space	436
	The Evolution of the Horse Family (Equidae)	437
	Rates of Evolution	439

<i>Chapter 18</i>	<i>Taxonomy and Evolution</i>	441
	Modern Taxonomy	441
	The Principles of Classification	442
	Taxonomy, Systematics, Classification, and Nomenclature	445
	Artificial, Natural, and Phylogenetic Classifications	446
	Phenetic versus Phylogenetic Classifications	449
	The Task Ahead	454
	Index	457
