

# Contents

I. Introduction . . . . .	1
A. The Place of <i>Dispersal</i> in the Chain of Life . . . . .	1
B. Limitations and Objections . . . . .	3
C. History and General Literature . . . . .	4
II. General Terminology . . . . .	6
III. The Units of Dispersal . . . . .	10
Vegetative Parts in Dispersal and False Vivipary . . . . .	11
IV. The Relation Between Flowers, Seeds and Fruits . . . . .	15
A. Seed and Fruit . . . . .	15
B. Morphological Fruit Systems . . . . .	16
C. Morphological Interaction Between Fruit and Flower . . . . .	16
1. General. . . . .	16
2. Position. . . . .	18
3. Monovuly and Monospermy . . . . .	19
4. <i>Inferiority and the Calyx</i> . . . . .	19
D. Inadequacy of Current Fruit Terminology . . . . .	20
V. Ecological Dispersal Classes, Established on the Basis of the Dispersing Agents . . . . .	22
A. General. . . . .	23
B. Invertebrates . . . . .	23
C. Fishes and Ichthyochory . . . . .	23
D. Reptiles and Saurochory . . . . .	25
E. Birds and Ornithochory . . . . .	28
1. Epizoochory by Birds . . . . .	28
2. Synzoochorous Bird Diaspores . . . . .	29
3. Endozoochory . . . . .	31
Non-adapted Diaspores . . . . .	31
Adapted Diaspores . . . . .	33
The Syndrome of Bird Diaspores . . . . .	35
Oil-containing Fruits . . . . .	38
Remarks on Evolution . . . . .	39
Mimesis (Imitative Seeds) . . . . .	40

F. Mammals and Mammaliochory . . . . .	45
1. General. . . . .	45
2. Dyszoochory and Rodents . . . . .	45
3. Accidental Endozoochory . . . . .	46
4. Adaptive Endozoochory . . . . .	47
Ungulates . . . . .	48
Bats and Chiropterochory . . . . .	49
Primates . . . . .	53
Various Mammals . . . . .	54
G. Ants and Myrmecochoy . . . . .	55
H. Wind and Anemochory . . . . .	60
1. General. . . . .	60
2. Dust Diaspores . . . . .	63
3. Balloons . . . . .	64
4. Plumed (Comose) Diaspores . . . . .	64
5. Winged Diaspores . . . . .	65
6. Tumbleweeds . . . . .	67
7. Wind-Ballists (Anemoballists) . . . . .	69
J. Water and Hydrochory . . . . .	70
1. General. . . . .	70
2. Rain Wash (Ombrohydrochory) . . . . .	71
3. Rain-Ballists. . . . .	72
4. Submerged Transport in Water . . . . .	73
5. Floating Diaspores . . . . .	74
K. Epizoochory, Transport on the Outside of Animals in General . . . . .	78
1. Diverse Origins . . . . .	78
2. Trample Burrs . . . . .	79
3. Water Burrs . . . . .	81
4. Burrs and Other Adhesives Above Ground Level . . . . .	81
5. Other Spiny Fruits . . . . .	82
L. Autochory, Dispersal by the Plant Itself . . . . .	83
1. General. . . . .	83
2. Active Ballists . . . . .	84
3. Passive Ballists . . . . .	86
4. Creeping Diaspores . . . . .	87
M. Barochory, Dispersal by Weight Only . . . . .	89
N. Retrospective View . . . . .	90
VI. Dispersal Strategy and the Biocoenosis . . . . .	91
A. Atelochory . . . . .	91
1. General. . . . .	91
2. Synaptospermy . . . . .	92
3. Basicarpy . . . . .	94
4. Geocarpy . . . . .	94

B. Polychory and Attendant Phenomena . . . . .	96
1. General. . . . .	96
2. Heterodiaspory . . . . .	98
3. Tachyspory . . . . .	100
C. Concluding Remarks on Synecology . . . . .	101
1. Deserts . . . . .	101
2. The Rain Forest . . . . .	102
3. Epiphytes . . . . .	106
4. The Arctic . . . . .	107
5. Island Floras . . . . .	107
6. Plant Sociology and Dispersal . . . . .	112
7. Coordinated Dispersal . . . . .	113
VII. Establishment . . . . .	115
A. General. . . . .	115
B. Fixation . . . . .	116
C. Vivipary . . . . .	117
D. Germination . . . . .	120
1. General Importance . . . . .	120
2. Span of Life and Dormancy . . . . .	121
3. Influence of Dispersing Agents and Other Stimuli . . . . .	122
VIII. The Evolution of Dispersal Organs in General . . . . .	125
A. Aims . . . . .	125
B. Isosporous Pteridophytes . . . . .	125
C. Heterosporous Pteridophytes with Free Megaspores . . . . .	125
D. Pteridosperms . . . . .	128
E. Gymnosperms (or Pre-Angiosperms) . . . . .	130
F. Angiosperms . . . . .	132
1. The Seed . . . . .	132
2. The Seed Escaped from Angiospermy . . . . .	133
3. The Sarcotesta Maintained in Conventional Fruits . . . . .	135
4. Arilloids . . . . .	138
5. Pulpa. . . . .	143
6. The Pericarp Fruit . . . . .	145
Shift of Function . . . . .	145
Autonomous Cycles . . . . .	147
Further Evolutionary Influences and Processes . . . . .	147
IX. Ecological Developments in Leguminous Fruits . . . . .	150
X. Dispersal and the Evolution of Grasses . . . . .	160
A. Comparison with Cyperaceae . . . . .	162
B. Return to Gramineae (i.c. Oryzeae) . . . . .	163
C. Bambusoid Grasses . . . . .	166

D. Bamboos . . . . .	168
E. Open Plains and Higher Grasses . . . . .	169
F. Some More Remarks on Awns and on Establishment	176
G. Retrospective Views . . . . .	180
XI. Man and His Plants in Relation to Dispersal . . . . .	183
References . . . . .	188
Subject Index . . . . .	201
Index of Scientific Plant Names . . . . .	206
Index of Scientific Animal Names . . . . .	215
