

Contents

Preface xiv

CHAPTER 1

Introduction: An Overview of Microbiology and Cell Biology 1

- 1.1 Microorganisms as Cells 3
- 1.2 Molecular Processes in Cells 6
- 1.3 Growth, Mutation, and Evolution 7
- 1.4 Cell Structure 10
- 1.5 Evolutionary Relationships among Living Organisms 11
- 1.6 Populations, Communities, and Ecosystems 14
- 1.7 Laboratory Culture of Microorganisms 15
- 1.8 The Impact of Microorganisms on Human Affairs 16
- 1.9 A Brief History of Microbiology 20

CHAPTER 2

Cell Chemistry 31

- 2.1 Atoms 32
- 2.2 Molecules and Chemical Bonding 33
- 2.3 Water as a Biological Solvent 36
- 2.4 Small Molecules: Monomers 37
- 2.5 Carbohydrates to Polysaccharides 38
- 2.6 Fatty Acids and Lipids 39
- 2.7 Nucleotides and Nucleic Acids 40
- 2.8 Amino Acids and Proteins 43
- 2.9 Stereoisomerism 48

CHAPTER 3

Cell Biology 52

- 3.1 Microscopes and Microscopy 54
- 3.2 Overview of Cell Structure: Prokaryotes and Eukaryotes 58
- 3.3 Cytoplasmic Membrane: Structure 62
- 3.4 Cytoplasmic Membrane: Function 65
- 3.5 The Cell Wall of Prokaryotes: Peptidoglycan and Related Molecules 70
- 3.6 The Outer Membrane of Gram-Negative Bacteria 75
- 3.7 Cell Wall Synthesis and Cell Division 78
- 3.8 Arrangement of DNA in Prokaryotes 80
- 3.9 Flagella and Motility 83
- 3.10 Bacterial Behavior: Chemotaxis, Phototaxis, and Other Taxes 87
- 3.11 Bacterial Cell Surface Structure and Cell Inclusions 90
- 3.12 Gas Vesicles 93
- 3.13 Endospores 95
- 3.14 The Nucleus: Defining Organelle of Eukaryotes 99
- 3.15 Organelles: Mitochondria and Chloroplasts 102
- 3.16 Comparisons of the Prokaryotic and Eukaryotic Cell 105

CHAPTER 4

Nutrition and Metabolism 109

- 4.1 Overview of Metabolism 111
- 4.2 Microbial Nutrition 112

- 4.3 Culture Media 116
- 4.4 Energetics 117
- 4.5 Catalysis and Enzymes 118
- 4.6 Oxidation–Reduction 121
- 4.7 Electron Carriers 123
- 4.8 High Energy Compounds 124
- 4.9 Fermentation and Substrate-Level Phosphorylation 126
- 4.10 Glycolysis: The Embden–Meyerhof Pathway 127
- 4.11 Respiration 130
- 4.12 Electron Transport Systems 130
- 4.13 Energy Conservation from Electron Transport 132
- 4.14 Carbon Flow: The Citric Acid Cycle 135
- 4.15 Balance Sheet of Aerobic Respiration and Energy Storage 137
- 4.16 Alternate Modes of Energy Generation: An Overview 138
- 4.17 Biosynthetic Pathways: Anabolism 139
- 4.18 Sugar Metabolism 140
- 4.19 Amino Acid Biosynthesis 142
- 4.20 Purine and Pyrimidine Biosynthesis 143
- 4.21 Biosynthesis of Fatty Acids 144

CHAPTER 5

Microbial Growth 149

- 5.1 Overview of Cell Growth 150
- 5.2 Population Growth 151
- 5.3 Growth Cycle of Populations 153
- 5.4 Measurement of Growth 155
- 5.5 Continuous Culture 158
- 5.6 Effect of Environmental Factors on Growth 161
- 5.7 Effect of Temperature on Microbial Growth 161
- 5.8 Microbial Growth at Temperature Extremes 162
- 5.9 Acidity and Alkalinity (pH) 168
- 5.10 Water Availability 169
- 5.11 Oxygen 172

CHAPTER 6

Macromolecules and Molecular Genetics 178

- 6.1 Macromolecules and Genetic Information 180
- 6.2 DNA Structure 181
- 6.3 Genetic Elements 194
- 6.4 Restriction and Modification of DNA 197
- 6.5 DNA Replication 199
- 6.6 Transcription 206
- 6.7 RNA Processing and Ribozymes 211
- 6.8 Transfer RNA 213
- 6.9 Translation: The Process of Protein Synthesis 216
- 6.10 The Genetic Code 220

CHAPTER 7

Regulation of Gene Expression 226

- 7.1 Regulation of Enzyme Activity 228
- 7.2 DNA Binding Proteins 230
- 7.3 Regulation of Transcription: Induction and Repression 233
- 7.4 Regulation of Transcription: Positive Control 235

- 7.5 Attenuation 237
- 7.6 Global Control 239
- 7.7 Signal Transduction and Two-Component Regulatory Systems 241
- 7.8 Contrasts in Gene Expression between Prokaryotes and Eukaryotes 245

CHAPTER 8

Viruses 248

- 8.1 General Properties of Viruses 249
- 8.2 Nature of the Virion 251
- 8.3 The Virus Host 255
- 8.4 Quantification of Viruses 256
- 8.5 General Features of Virus Reproduction 257
- 8.6 Steps in Virus Multiplication 258
- 8.7 Overview of Bacterial Viruses 263
- 8.8 RNA Bacteriophages 263
- 8.9 Single-Stranded Icosahedral DNA Bacteriophages 265
- 8.10 Single-Stranded Filamentous DNA Bacteriophages 267
- 8.11 Double-Stranded DNA Bacteriophages: Lytic Viruses 268
- 8.12 Temperate Bacteriophages: Lysogeny and Lambda 272
- 8.13 A Transposable Phage: Bacteriophage Mu 278
- 8.14 Overview of Animal Viruses 279
- 8.15 Positive-Strand RNA Animal Viruses 284
- 8.16 Negative-Strand RNA Viruses 285
- 8.17 Double-Stranded RNA Viruses: Reoviruses 289
- 8.18 Replication of DNA Viruses of Animals 290
- 8.19 Herpesviruses 292
- 8.20 Pox Viruses 293
- 8.21 Adenoviruses 294
- 8.22 Retroviruses 295
- 8.23 Viroids and Prions 300

CHAPTER 9

Microbial Genetics 304

- 9.1 Mutations and Mutants 306
- 9.2 Molecular Basis of Mutation 308
- 9.3 Mutagens 312
- 9.4 Mutagenesis and Carcinogenesis: The Ames Test 315
- 9.5 Genetic Recombination 316
- 9.6 Genetic Transformation 320
- 9.7 Transduction 325
- 9.8 Plasmids 328
- 9.9 Conjugation and Chromosome Mobilization 333
- 9.10 Transposons and Insertion Sequences 338
- 9.11 Overview of the Bacterial Genetic Map 343
- 9.12 Genetics in Eukaryotic Microorganisms 347
- 9.13 Yeast Genetics 349
- 9.14 Mitochondrial Genetics 351

CHAPTER 10

Genetic Engineering and Biotechnology 357

- 10.1 Molecular Cloning 359
- 10.2 Plasmids as Cloning Vectors 359
- 10.3 Bacteriophage Lambda as a Cloning Vector 361
- 10.4 Other Vectors 363
- 10.5 Hosts for Cloning Vectors 367
- 10.6 Finding the Right Clone 368
- 10.7 Expression Vectors 370

- 10.8 Synthetic DNA 373
- 10.9 Amplifying DNA: The Polymerase Chain Reaction 374
- 10.10 Cloning and Expression of Mammalian Genes in Bacteria 377
- 10.11 *In Vitro* and Site-Directed Mutagenesis 380
- 10.12 Practical Applications of Genetic Engineering 382
- 10.13 Production of Mammalian Products and Vaccines by Genetically Engineered Microorganisms 384
- 10.14 Genetic Engineering in Plant Agriculture 389
- 10.15 Genetic Engineering in Animal and Human Genetics 392
- 10.16 Genetic Engineering as a Microbial Research Tool 393
- 10.17 Summary of Principles at the Basis of Genetic Engineering 393

CHAPTER 11

Microbial Growth Control 397

- 11.1 Heat Sterilization 399
- 11.2 Radiation Sterilization 401
- 11.3 Filter Sterilization 404
- 11.4 Chemical Growth Control 405
- 11.5 Disinfectants and Antiseptics 408
- 11.6 Microbial Growth Control in Food 408
- 11.7 Growth Factor Analogs 412
- 11.8 Antibiotics 414
- 11.9 β -Lactam Antibiotics: Penicillins and Cephalosporins 415
- 11.10 Antibiotics from Prokaryotes 418
- 11.11 Viral Control 420
- 11.12 Fungal Control 421
- 11.13 Antibiotic Resistance 422

CHAPTER 12

Industrial Microbiology 430

- 12.1 Industrial Microorganisms and Products 431
- 12.2 Growth and Product Formation in Industrial Processes 434
- 12.3 Characteristics of Large-Scale Fermentations 436
- 12.4 Fermentation Scale-Up 438
- 12.5 Antibiotics: Isolation and Characterization 440
- 12.6 Antibiotics: Industrial Production 442
- 12.7 Vitamins and Amino Acids 447
- 12.8 Microbial Bioconversion 449
- 12.9 Enzymes 450
- 12.10 Vinegar 454
- 12.11 Citric Acid and Other Organic Compounds 455
- 12.12 Yeast 456
- 12.13 Alcohol and Alcoholic Beverages 458
- 12.14 Food from Microorganisms 464
- 12.15 Sewage and Wastewater Microbiology 465

CHAPTER 13

Metabolic Diversity among the Microorganisms 473

- 13.1 Energy-Yielding Metabolism 474
- 13.2 Photosynthesis 476
- 13.3 Role of Chlorophyll and Bacteriochlorophyll in Photosynthesis 477
- 13.4 Anoxygenic Photosynthesis 479

13.5	Oxygenic Photosynthesis	484
13.6	Additional Aspects of Photosynthetic Light Reactions: Carotenoids and Phycobilins	486
13.7	Autotrophic CO ₂ Fixation: The Calvin Cycle	488
13.8	Chemolithotrophy: Energy from the Oxidation of Inorganic Electron Donors	490
13.9	Hydrogen-Oxidizing Bacteria	491
13.10	Sulfur Bacteria	492
13.11	Iron-Oxidizing Bacteria	495
13.12	Ammonium and Nitrite-Oxidizing Bacteria	497
13.13	Summary of Autotrophy and ATP Production among Chemolithotrophs	499
13.14	Anaerobic Respiration	501
13.15	Nitrate Reduction and the Denitrification Process	502
13.16	Sulfate Reduction	505
13.17	Carbon Dioxide as an Electron Acceptor: Methanogenesis and Acetogenesis	508
13.18	Other Electron Acceptors for Anaerobic Respiration	509
13.19	Fermentations: Energetic and Redox Considerations	511
13.20	Fermentations: Diversity, Syntrophy, and Role in Anoxic Decomposition	514
13.21	Hexose, Pentose, and Polysaccharide Utilization	517
13.22	Organic Acid Metabolism	519
13.23	Lipids as Microbial Nutrients	521
13.24	Molecular Oxygen (O ₂) as a Reactant in Biochemical Processes	522
13.25	Hydrocarbon Transformations	523
13.26	Nitrogen Metabolism	524
13.27	Nitrogen Fixation	525

CHAPTER 14

Microbial Ecology **532**

14.1	Microorganisms in Nature	535
14.2	Methods in Microbial Ecology	537
14.3	Enrichment and Isolation Methods	537
14.4	Identification and Quantification: Nucleic Acid Probes, Fluorescent Antibodies, and Viable Counts	542
14.5	Microbial Activity Measurement: Radioisotopes and Microelectrodes	545
14.6	Microbial Activity Measurements: Stable Isotopes	547
14.7	Aquatic Habitats	550
14.8	Terrestrial Environments	552
14.9	Deep-Sea Microbiology	554
14.10	Hydrothermal Vents	557
14.11	Carbon Cycle	561
14.12	Methanogenesis and Syntrophy	563
14.13	Rumen Microbial Ecosystem	567
14.14	Biogeochemical Cycles: Nitrogen	571
14.15	Biogeochemical Cycles: Sulfur	573
14.16	Biogeochemical Cycles: Iron	575
14.17	Microbial Leaching	578
14.18	Biogeochemical Cycles: Trace Metals and Mercury	579
14.19	Petroleum Biodegradation	582
14.20	Biodegradation of Xenobiotics	584
14.21	Plant-Microorganism Interactions	589
14.22	<i>Agrobacterium</i> and Plant Interactions: Crown Gall and Hairy Root	591
14.23	Root Nodule Bacteria and Symbiosis with Legumes	595

CHAPTER 15

Microbial Evolution, Systematics, and Taxonomy **606**

15.1	Evolution of Earth and Earliest Life Forms	607
15.2	Primitive Organisms and Metabolic Strategies	610
15.3	Primitive Organisms and Molecular Coding	614
15.4	Eukaryotes and Organelles	615
15.5	Evolutionary Chronometers	617
15.6	Ribosomal RNA Sequences and Evolution	618
15.7	Microbial Phylogeny as Revealed by Ribosomal RNA Sequencing	621
15.8	Characteristics of the Primary Domains	624
15.9	Taxonomy, Nomenclature, and <i>Bergey's Manual</i>	627

CHAPTER 16

Prokaryotic Diversity: Bacteria **635**

16.1	Purple and Green (Anoxygenic Phototrophic) Bacteria	638
16.2	Cyanobacteria	654
16.3	Prochlorophytes	658
16.4	Chemolithotrophs: Nitrifying Bacteria	659
16.5	Chemolithotrophs: Sulfur- and Iron-Oxidizing Bacteria	661
16.6	Chemolithotrophs: Hydrogen-Oxidizing Bacteria	664
16.7	Methanotrophs and Methylotrophs	666
16.8	Sulfate- and Sulfur-Reducing Bacteria	671
16.9	Homoacetogenic Bacteria	674
16.10	Budding and Appendaged (Prosthecae) Bacteria	676
16.11	Spirilla	682
16.12	Spirochetes	686
16.13	Gliding Bacteria	689
16.14	Sheathed Bacteria	696
16.15	Pseudomonads	698
16.16	Free-Living Aerobic Nitrogen-Fixing Bacteria	701
16.17	Acetic Acid Bacteria	703
16.18	<i>Zymomonas</i> and <i>Chromobacterium</i>	704
16.19	<i>Vibrio</i> and Related Genera	705
16.20	Facultatively Aerobic Gram-Negative Rods	707
16.21	<i>Neisseria</i> and Other Gram-Negative Cocci	712
16.22	Rickettsias	712
16.23	Chlamydias	715
16.24	Gram-Positive Bacteria: Cocci	716
16.25	Lactic Acid Bacteria	718
16.26	Endospore-Forming Gram-Positive Rods and Cocci	722
16.27	Mycoplasmas	728
16.28	High GC Gram-Positive Bacteria: "Actinomycetes"	731
16.29	Coryneform Bacteria	731
16.30	Propionic Acid Bacteria	733
16.31	<i>Mycobacterium</i>	734
16.32	Filamentous Actinomycetes	736

CHAPTER 17

Prokaryotic Diversity: Archaea **741**

17.1	Extremely Halophilic Archaea	743
17.2	Methane-Producing Archaea: Methanogens	748
17.3	Hyperthermophilic Archaea	757
17.4	<i>Thermoplasma</i> : A Cell-Wall-less Archaeon	764
17.5	Limits of Microbial Existence: Temperature	766
17.6	Archaea: Earliest Life Forms?	767

CHAPTER 18***Eukarya: Eukaryotic Microorganisms* 769**

- 18.1 Algae 770
- 18.2 Fungi 774
- 18.3 Slime Molds 778
- 18.4 Protozoa 780

CHAPTER 19***Host-Parasite Relationships* 785**

- 19.1 Microbial Interactions with Higher Organisms 787
- 19.2 Normal Flora of the Skin 788
- 19.3 Normal Flora of the Oral Cavity 789
- 19.4 Normal Flora of the Gastrointestinal Tract 792
- 19.5 Normal Flora of Other Body Regions 795
- 19.6 Entry of the Pathogen into the Host 796
- 19.7 Colonization and Growth 798
- 19.8 Exotoxins 800
- 19.9 Enterotoxins 802
- 19.10 Endotoxins 804
- 19.11 Virulence 806
- 19.12 Nonspecific Host Defenses 808
- 19.13 Inflammation and Fever 810

CHAPTER 20***Concepts of Immunology* 813**

- 20.1 Cells and Organs of the Immune System 815
- 20.2 Immunogens and Antigens 819
- 20.3 Nonspecific Immunity: Phagocytes and Phagocytosis 820
- 20.4 Specific Immunity: Lymphocytes 822
- 20.5 Immunoglobulins (Antibodies) 824
- 20.6 T Cell Receptors 828
- 20.7 Histocompatibility Proteins 829
- 20.8 Cytokines 832
- 20.9 Cell-Mediated Immunity 834
- 20.10 Clonal Selection and Immune Tolerance 836
- 20.11 Mechanisms of Immunoglobulin Formation 839
- 20.12 Genetics and Evolution of Immunoglobulins and T Cell Receptors 842
- 20.13 The Complement System 846
- 20.14 Polyclonal and Monoclonal Antibodies 847
- 20.15 Antigen-Antibody Reactions 851
- 20.16 Immune Diseases 855
- 20.17 Immunity to Infectious Diseases 858

CHAPTER 21***Clinical and Diagnostic Microbiology and Immunology* 865**

- 21.1 Isolation of Pathogens from Clinical Specimens 866
- 21.2 Growth-Dependent Identification Methods 872
- 21.3 Testing Cultures for Antibiotic Sensitivity 876
- 21.4 Immunodiagnosics 876
- 21.5 Agglutination 881
- 21.6 Immunoelectron Microscopy 882
- 21.7 Fluorescent Antibodies 883
- 21.8 Enzyme-Linked Immunosorbent Assay and Radioimmunoassays 885
- 21.9 Immunoblot Procedures 890

- 21.10 Nucleic Acid Probes in Clinical Diagnostics 893
- 21.11 Diagnostic Virology 897
- 21.12 Safety in the Clinical Laboratory 898

CHAPTER 22***Epidemiology and Public Health Microbiology* 902**

- 22.1 The Science of Epidemiology 904
- 22.2 Epidemiological Terminology 904
- 22.3 Disease Reservoirs 906
- 22.4 Epidemiology of AIDS: An Example of How Epidemiological Research Is Done 909
- 22.5 Infectious Disease Transmission 911
- 22.6 The Host Community 913
- 22.7 Hospital-Acquired (Nosocomial) Infections 916
- 22.8 Public Health Measures for the Control of Epidemics 917
- 22.9 Global Health Considerations 919
- 22.10 Emerging and Resurgent Infectious Diseases 921

CHAPTER 23***Major Microbial Diseases* 929**

- 23.1 Airborne Transmission of Pathogens 930
- 23.2 Respiratory Infections: Bacterial 931
- 23.3 *Mycobacterium* and Tuberculosis 938
- 23.4 Respiratory Infections: Viral 940
- 23.5 Why are Respiratory Infections So Common? 946
- 23.6 Sexually Transmitted Diseases 947
- 23.7 Acquired Immunodeficiency Syndrome 953
- 23.8 Animal-Transmitted Diseases: Rabies 960
- 23.9 Insect- and Tick-Transmitted Diseases: Rickettsias 961
- 23.10 Tick-Transmitted Diseases: Lyme Disease 963
- 23.11 Insect-Transmitted Diseases: Malaria 966
- 23.12 Insect-Transmitted Diseases: Plague 969
- 23.13 Foodborne Diseases 971
- 23.14 Waterborne Diseases 977
- 23.15 Public Health and Water Quality 980
- 23.16 Pathogenic Fungi 982

APPENDIX 1***Energy Calculations in Microbial Bioenergetics* A-1****APPENDIX 2*****Advanced Mathematics of Microbial Growth and Chemostat Operation* A-5****APPENDIX 3*****Bergey's Classification of Prokaryotes* A-7*****Glossary* G-1*****Index* I-1**
