Contents	iii
List of Figures	ix
List of Tables	xi
List of Abbreviations	xiii
1 Introduction	1
1.1 Historical Background and Motivation	1
1.2 Scope and Aim	5
1.3 Organization and Contributions	6
2 Stochastic Mortality Modeling	13
2.1 An Arbitrage-Free Family of Longevity Bonds	14
2.1.1 Basic Definitions	14
2.1.2 Survival Probabilities and Interest Rates	17
2.1.3 Existence of Equivalent Martingale Measures	29
2.1.4 Generalization Towards Multiple Inception Dates	32
2.2 Spot Force Modeling	39
2.2.1 An Alternative Approach to Stochastic Mortality Mod- eling	40

2.2.2	Comparison of the Approaches	44
2.2.3	Example: An Affine Spot Force Model with Jumps . . .	46
2.3	Forward Force Modeling	51
2.3.1	The Heath-Jarrow-Morton Drift Condition	53
2.3.2	What is the Age/Term-Structure of Mortality? (1) . .	57
2.3.3	Consistent Forward Surface Factor Models	62
2.3.4	Reformulation of the Setup – the Musiela Parametrization	68
2.3.5	Finite Dimensional Realizations	73
2.3.6	Example: A Gaussian Gompertz Model	80
2.4	Summary and Remarks	87
3	Stochastic Mortality and Life Insurance	91
3.1	Mortality Risk in Life Insurance	92
3.1.1	A Simple Life Insurance Model	92
3.1.2	Decomposition of Mortality Risk	94
3.1.3	Mortality Risk in Insurance Prices	95
3.2	Pricing Longevity Bonds	99
3.2.1	The Approach of Milevsky et al. (2005)	100
3.2.2	The Approach of Lin and Cox (2005)	104
3.2.3	A No-Arbitrage Model for Longevity Bonds	107
3.2.4	What is the Age/Term-Structure of Mortality? (2) . .	112
3.3	Stochastic Mortality in Actuarial Practice	116
3.3.1	Different Tables – Different Models	117
3.3.2	Inconsistencies of Classical Methods with Stochastic Mor- tality	120
3.3.3	Valuation of Mortality Contingent Options	122
3.4	Summary and Remarks	129

4	Securitization of CAT Mortality Risk	133
4.1	The Market for Catastrophe Mortality Bonds	135
4.1.1	Structure of Catastrophe Mortality Bonds	136
4.1.2	Market Development	139
4.1.3	Modeling Approaches in Practice	143
4.2	Calibration of our Model	149
4.2.1	Backtesting the Model and Historical Parametrizations	150
4.2.2	Risk-Adjusted Calibration based on Insurance Prices	160
4.2.3	Parameters Implied by Market Prices	164
4.3	Results	168
4.4	Summary and Outlook	177
5	Securitization of Longevity Risk	181
5.1	Longevity Derivatives	184
5.1.1	The EIB/BNP Longevity Bond	184
5.1.2	An Alternately Designed Longevity Derivative	186
5.2	Forward Force Approach to Longevity Modeling	191
5.2.1	Modeling the Volatility of Mortality	191
5.2.2	Calibration of Gaussian Models	193
5.2.3	General Calibration	196
5.2.4	Modeling and Pricing Longevity Derivatives	197
5.3	Specification and Application	201
5.3.1	Specification Based on Epidemiological Insights	202
5.3.2	Data and Calibration Results	203
5.3.3	Application of the Model	212
5.4	Summary, Remarks, and Outlook	220

A Appendix to Chapter 4	225
Bibliography	229

List of Figures

3.1	Comparison between different ${}_t\tilde{q}_{50}$	106
3.2	Market model	108
3.3	Monthly time series of U.K. annuity rates (01/2001 - 12/2005)	109
3.4	Comparison between implied and Wang ${}_t\tilde{q}_{50}$	111
4.1	Tartan deal structure (Source: Linfoot (2007))	136
4.2	RMS Pandemic Influenza Model framework (Source: Logisch (2007))	145
4.3	Milliman model overview (Source: Logisch (2007))	146
4.4	Mortality intensities 1959	152
4.5	Mortality intensities for years 36 and 43	152
4.6	Time series of Z^1	153
4.7	Distribution of the index value	169
4.8	Influence of the expected jump size on the tranche spreads	172
4.9	Discretized tranche loss distributions	173
5.1	Basic design	187
5.2	An alternatively designed longevity derivative	190
5.3	Volatility structure for the Gaussian and the Square-root model	209
5.4	Relative volatility structure for the Gaussian and the Square-root model	211

5.5	Influence of a on the trigger probability for $T = 20$	213
5.6	Influence of a on C_0^{RI} for $T = 10$ and $T = 20$	217
A.1	Influence of the speed of mean reversion κ on the expected tranche loss	227
A.2	Influence of the jump intensity λ on the expected tranche loss	227
A.3	Influence of the expected jump size $1/\nu$ on the expected tranche loss	228

List of Tables

4.1	Gender and age weights for the Tartan transaction	138
4.2	Program summary of the notes issued by Tartan	139
4.3	Deal comparison (Source: New Issue Reports from S&P and Moody's; <i>Bloomberg</i> data)	142
4.4	Parametrizations of Z^1	156
4.5	Parametrizations for the jump size distribution	159
4.6	Parameter calibration based on insurance prices	163
4.7	Cash flows for the Tartan bonds	166
4.8	Influence of the Baseline Component	168
4.9	Influence of the Catastrophe Component	170
4.10	Summary of results for risk-adjusted parametrization based on the Tartan tranche	174
4.11	Summary of results for risk-adjusted parametrization based on insurance prices	175
5.1	Gaussian model	203
5.2	Square-root model	204
5.3	Resulting parametrizations	207
5.4	Comparative statistics for the longevity security ($a = 2.5\%$, $T = 20$)	212
5.5	Discounted expected values for $x_0 = 65$, $T = 20$, and $a = 2.5\%$	216
