

CONTENTS

Preface	ix
Acknowledgments	xi
1 Introduction	1
1.1 Groundwater systems	1
1.2 Conceptual model	5
1.3 Hydrogeological report writing	9
2 Desk Study	11
2.1 Defining the area	12
2.2 Identifying the aquifers	12
2.3 Groundwater levels	14
2.4 Surface water	16
2.5 Recharge	16
2.6 Groundwater use	18
2.7 Groundwater chemistry	18
2.8 Aerial photographs and satellite imagery	18
2.9 Planning a fieldwork programme	20
3 Field Evaluation of Aquifers	23
3.1 Grain size analysis	23
3.2 Hydraulic properties of aquifers	25
3.3 Hydraulic properties and rock types	29
3.4 Assessing hydraulic properties	36
3.5 Using hydraulic property information	38
4 Groundwater Levels	43
4.1 Water-level dippers	43
4.2 Continuous water-level recorders	50
4.3 Measuring ground levels and locations	56
4.4 Tool-box	59
4.5 Well catalogue	61
4.6 Field surveys for wells, boreholes and springs	61
4.7 Interpretation of abstraction borehole water levels	68
4.8 Groundwater level monitoring networks	76
4.9 Groundwater level fluctuations	76
4.10 Managing groundwater level data	84

CONTENTS

4.11	Constructing groundwater contour maps and flow nets	85
4.12	Interpretation of contour maps and flow nets	89
4.13	Using other groundwater information	92
5	Rainfall, Springs and Streams	95
5.1	Precipitation	95
5.2	Evaporation	100
5.3	Springs	102
5.4	Stream-flow measurement	105
5.5	Stage-discharge relationships	115
5.6	Choosing the best method	118
5.7	Processing flow data	118
6	Pumping Tests	121
6.1	What is a pumping test?	121
6.2	Planning a pumping test	122
6.3	Pumps and pumping	122
6.4	On-site measurements	128
6.5	Pre-test monitoring	134
6.6	Test set-up	134
6.7	Step tests	136
6.8	Constant rate tests	138
6.9	Recovery tests	139
6.10	Pumping test analysis	139
6.11	Tests on single boreholes	151
6.12	Packer tests	154
7	Groundwater Chemistry	159
7.1	Analytical suites and determinands	159
7.2	Sampling equipment	161
7.3	Sampling protocols	171
7.4	Monitoring networks	181
7.5	Using chemical data	181
8	Recharge Estimation	187
8.1	Water balance	187
8.2	Rainfall recharge	188
8.3	Induced recharge	192
8.4	Other sources of recharge	193
9	Specialist Techniques	195
9.1	Borehole and piezometer installation	195
9.2	Down-hole geophysics	203

CONTENTS

9.3	Using artificial tracers	210
10	Practical Applications	219
10.1	Developing a conceptual model	219
10.2	Groundwater supplies	220
10.3	Contamination investigations	225
10.4	Groundwater lowering	230
10.5	Rising water tables	233
10.6	Investigating wetland hydrology	235
10.7	Groundwater modelling	237
	Appendix I Good working practice	239
I.1	Safety codes	239
I.2	Safety clothing and equipment	241
I.3	Distress signals	241
I.4	Exposure or hypothermia	241
I.5	Heat exhaustion	242
I.6	Working near wells, boreholes and monitoring piezometers	242
I.7	Hygiene precautions for water supplies	243
I.8	Trial pits	243
I.9	Electrical equipment	243
I.10	Filling fuel tanks	243
I.11	Waste disposal sites	244
I.12	Stream flow measurement	244
	Appendix II Conversion factors	245
	References	249
	Index	255
