

Contents

- 1 Ions at the Particle–Aqueous Solution Interface, 3
 - 1.1 Adsorption 3
 - 1.2 Adsorbate Structure 11
 - 1.3 Surface Charge 20
 - 1.4 Points of Zero Charge 25
 - 1.5 Ion Adsorption Trends 33
 - Notes 37
 - For Further Reading 40
 - Research Matters 40
- 2 The Spectroscopic Detection of Surface Species, 43
 - 2.1 Strategy 43
 - 2.2 X-ray Absorption Spectroscopy 49
 - 2.3 Infrared Spectroscopy 55
 - 2.4 Electron Spin Resonance Spectroscopy 60
 - 2.5 Nuclear Magnetic Resonance Spectroscopy 65
 - Notes 71
 - For Further Reading 76
 - Research Matters 77
- 3 Surface Chemical Kinetics, 79
 - 3.1 Phenomenology 79
 - 3.2 Specific Adsorption Reactions 85

3.3	Surface Oxidation-Reduction Reactions	94
3.4	Proton-Promoted Mineral Dissolution Reactions	101
3.5	Ligand-Promoted Mineral Dissolution Reactions	106
	Notes	115
	For Further Reading	123
	Research Matters	123
4	Modeling Ion Adsorption,	126
4.1	Modeling the Diffuse Ion Swarm	126
4.2	Modeling Surface Complexes	140
4.3	Modeling Temperature Effects	148
4.4	Modeling Affinity	157
4.5	Modeling Natural Particle Adsorption Reactions	163
	Notes	170
	For Further Reading	180
	Research Matters	180
5	Colloidal Phenomena,	182
5.1	Probing Particle Structure	182
5.2	Particle Formation Kinetics	193
5.3	The Stability Ratio	202
5.4	The von Smoluchowski Rate Law	211
5.5	Solving the von Smoluchowski Equation	219
	Notes	226
	For Further Reading	235
	Research Matters	235
	Index	239
