## Foreword

xvii

### CHAPTER 1

Micro- and Nanoengineering the Cellular Microenvironment	1
1.1 Introduction	1
1.2 Cellular Microenvironment	2
1.3 Controlling Cellular Behavior	3
1.4 Micro- and Nanoengineering the Cellular Microenvironment	4
1.5 Book Structure	5
1.5.1 Controlling the Soluble Cellular Microenvironment	6
1.5.2 Controlling the Insoluble Biochemical Cellular Microenvironment	6
1.5.3 Controlling the Biophysical Cues of the Cellular Microenvironment	7
References	9

### CHAPTER 2

Gradient-Generating Microfluidic Devices for Cell Biology Research	11
2.1 Introduction	11
2.2 Conventional Devices for Soluble Gradient Generation	12
2.2.1 The Boyden Chamber	12
2.2.2 Under-Agarose Assay	13
2.2.3 The Zigmond Chamber	13
2.2.4 The Dunn Chamber	13
2.2.5 Micropipette Assay	14
2.3 Microfluidic-Based Devices for Gradient Generation	14
2.3.1 Flow-Based Gradient Devices	14
2.3.2 Free-Diffusion-Based Gradient Devices	16
2.4 Biological Applications of Gradient-Generating Microfluidic Devices	17
2.4.1 Biological Applications of Flow-Based Gradient Devices	17
2.4.2 Biological Applications of Free-Diffusion-Based Gradient Devices	22
2.5 Summary and Future Directions	25
References	27

### CHAPTER 3

Surface Patterning for Controlling Cell-Substrate Interactions	33
3.1 Introduction	33
3.2 Self-Assembled Monolayers, Lithography, and Other Important Tools	33

3.2.1	Introduction to SAMs	33
3.2.2	Lithography and Patterning	34
3.2.3	Patterning with SAMs, Stamping, Membranes, and Microfluidic Channels	35
3.3	Controlling the Adsorption of Proteins on Surface	36
3.3.1	Amount of Protein Adsorption Versus the Hydrophobicity of the Surface	36
3.3.2	Inert Surfaces	37
3.4	Patterning of Proteins and Cells	39
3.4.1	Patterning with SAMs	39
3.4.2	Patterning with Other Polymers of PEG	40
3.4.3	Patterning with Other Polymers	40
3.4.4	Patterning with Lipids	40
3.4.5	Patterning with Holes on Thin Membranes	40
3.4.6	Patterning Based on Microfluidics	40
3.4.7	Light-Based Methods	40
3.4.8	Patterning that Combines Two or More Tools	41
3.5	Dynamic Patterning of Cells	41
3.5.1	Dynamic Patterning Using SAMs	41
3.5.2	Dynamic Patterning Using Polymers	42
3.5.3	Dynamic Patterning Based on Light	43
3.5.4	Dynamic Patterning Using Oxidation by Microelectrodes	43
3.5.5	Dynamic Patterning Using Thermally Responsive Materials	43
3.6	Other Systems for Patterning Cells	43
3.6.1	Patterning Cell Adhesion with Cracks	44
3.6.2	Other Self-Assembled Systems	44
3.7	Conclusion	45
	Acknowledgments	45
	References	45

## **CHAPTER 4**

	Patterned Cocultures for Controlling Cell-Cell Interactions	53
4.1	Introduction	53
4.2	Random Coculture Systems	54
4.3	Patterned Coculture Systems	54
4.3.1	Selective Adhesion of Cells to Micropatterned Substrate	54
4.3.2	Microfluidic Patterning for Cocultures	56
4.3.3	Stencil-Based Patterning	56
4.3.4	Micropatterning Using Surfaces Switchable from Cell Repulsive to Adhesive	59
4.3.5	Other Approaches	61
4.4	Conclusion	63
	References	64

## **CHAPTER 5**

	Micro- and Nanofabricated Scaffolds for Three-Dimensional Tissue Recapitulation	71
--	--	----

5.1	Introduction	71
5.2	Microfabricated Interfaces	71
5.2.1	Microtopography for Cardiac Tissue Engineering	72
5.2.2	Blood Vessel Microengineering	75
5.2.3	Microtextured Thin-Film Scaffolds for Retinal Tissue Engineering	78
5.3	Nanofabricated Interfaces	83
5.3.1	Nanostructures for Osseointegration	83
5.3.2	Nanoporous Interfaces for Cellular Delivery	86
5.4	Conclusion	93
	References	94

## **CHAPTER 6**

	<b>Biomimetic Hydrogels to Support and Guide Tissue Formation</b>	<b>101</b>
6.1	Introduction	101
6.2	Hydrogels and Their Synthesis	101
6.3	Incorporating Bioactive Factors into Hydrogels	102
6.4	Two-Dimensional Patterning of Hydrogels	107
6.5	Three-Dimensional Rapid Prototyping of Hydrogels	110
6.5.1	Single-Photon Excitation	110
6.5.2	Multiphoton Excitation	112
6.6	Summary	113
	References	115

## **CHAPTER 7**

	<b>Three-Dimensional Cell-Printing Technologies for Tissue Engineering</b>	<b>121</b>
7.1	Overview	121
7.2	Development of Cell-Printing Technologies	122
7.3	Conventional Three-Dimensional Cell-Printing Methods	123
7.3.1	Laser Printing	124
7.3.2	Current Issues with Laser-Printing Approaches	126
7.3.3	Inkjet Printing	126
7.3.4	Current Problems with Inkjet-Printing Approaches	129
7.4	Current Applications of Cell-Printing Technology: Organ Printing	129
7.5	Other Applications of Cell Printing	132
7.6	Technologies for Three-Dimensional Cell Printing: Single Cell Epitaxy by Acoustic Picoliter Droplets	133
7.7	Conclusion	134
	Acknowledgments	134
	References	136

## **CHAPTER 8**

	<b>Using Microfabrication to Engineer Cellular and Multicellular Architecture</b>	<b>139</b>
8.1	Introduction	139
8.2	Patterning Adhesion	141
8.3	Patterning Single Cells	142
8.4	Multicellular Patterning	143

8.5	Engineering Single Cell-Cell Interactions	146
8.6	Cell Patterning by Active Positioning: Dielectrophoresis and Microfluidics	147
8.7	Three-Dimensional Patterning	150
8.8	Future Directions	155
	References	155

## **CHAPTER 9**

	Technologies and Applications for Engineering Substrate Mechanics to Regulate Cell Response	161
9.1	Introduction	161
9.2	How Cells Sense the Stiffness of Their Substrate	162
9.3	Technologies to Engineer the Mechanical Properties of the Substrate	164
	9.3.1 Natural Biopolymer-Based Systems	165
	9.3.2 Synthetic Polymer-Based Systems	168
9.4	Effects of Substrate Mechanics on Cell Response	170
	9.4.1 Cell Spreading and Motility	171
	9.4.2 Cell Growth and Death	173
	9.4.3 Cell Differentiation	173
	9.4.4 Cellular Organization	175
9.5	Summary and Future Challenges	176
	References	178

## **CHAPTER 10**

	Engineered Surface Nanotopography for Controlling Cell-Substrate Interactions	185
10.1	Introduction	185
10.2	Methods for Generating Nanotopography	186
	10.2.1 Conventional Nanolithography	187
	10.2.2 Unconventional Nanolithography	188
10.3	Topical Issues in Controlling Cell-Substrate Interactions	194
	10.3.1 Spatial Control of Cell-Adhesive Proteins on Nanostructured Surface for Cell-Matrix and Cell-Cell Interactions	194
	10.3.2 Nanotopography-Induced Changes in Cell Morphology and Motility	195
	10.3.3 Focal Adhesion and Integrin-Dependent Signal Transduction	197
	10.3.4 Nanotopography-Integrated Tissue Scaffolds	199
10.4	Conclusion	201
	References	201

## **CHAPTER 11**

	Microfluidics for Assisted Reproductive Technologies	209
11.1	Introduction	209
11.2	Micro-/Nanotechnology	210
	11.2.1 Assisted Reproductive Technologies	210
	11.2.2 In Vitro Oocyte Maturation	211
	11.2.3 Sperm Selection and Isolation	211

11.2.4	In Vitro Fertilization	214
11.2.5	Manipulation of Oocytes/Embryos Using Microfluidics	217
11.2.6	Embryo Culture	218
11.2.7	Integrated IVP Microfluidic Devices	221
11.2.8	Embryo Bioanalyses	222
11.2.9	Microfluidic Platform Construction	223
11.3	Conclusions and Future Directions	224
	Acknowledgments	224
	References	225

## **CHAPTER 12**

<b>Microscale Technologies for Engineering Embryonic Stem Cell Environments</b>		<b>231</b>
12.1	Embryonic Stem Cells	231
12.1.1	ESC Self-Renewal	231
12.1.2	ESC Differentiation	233
12.2	Microscale Technologies	235
12.2.1	Micropatterning	235
12.2.2	Microfluidics	239
12.2.3	Microencapsulation	240
12.2.4	Microparticles	242
12.3	Conclusion	243
	References	243

## **CHAPTER 13**

<b>Neuroscience on a Chip: Microfabrication for In Vitro Neurobiology</b>		<b>253</b>
13.1	Introduction	253
13.2	Microengineered Neurite Growth and Neuronal Polarity	253
13.2.1	Guidance by Insoluble Factors	254
13.2.2	Guidance by Microtopography	259
13.2.3	Guidance by Gradients of Soluble Factors	262
13.2.4	Integration of Multiple Guidance Cues	263
13.3	Microengineered Cell-Cell Signaling	264
13.3.1	Synaptogenesis on a Chip	264
13.3.2	Microengineered Glial Cell Interactions and Glia-Neuron Cocultures	269
13.4	Conclusions and Future Directions	270
	References	272

## **CHAPTER 14**

<b>Self-Assembly of Nanomaterials for Engineering Cell Microenvironment</b>		<b>279</b>
14.1	Overview	279
14.2	Proteins and Peptides	280
14.3	Self-Assembly of Proteins and Peptides	280
14.4	Findings About Amphiphilic and Surfactantlike Peptides	281
14.5	Findings About Three-Dimensional Peptide Matrix Scaffolds	283

14.6	Use of Peptide Hydrogels in Regenerative Biology and Three-Dimensional Cell Culture	285
14.7	Applications of Synthetic Amphiphilic Peptides in Other Fields of Nanotechnology	290
14.8	Conclusion	291
	References	292

## **CHAPTER 15**

	<b>Microvascular Engineering: Design, Modeling, and Microfabrication</b>	<b>295</b>
15.1	Introduction	295
15.1.1	Requirement for Vascularization in Complex Engineered Tissues and Organs	296
15.1.2	Growth Factors, Matrices, and Engineered Scaffolds	296
15.2	Design of Microvascular Networks	298
15.2.1	Scaffold Design Considerations: Mechanics, Transport, and Chemistry	298
15.2.2	Morphometry of the Microcirculation	299
15.2.3	Scaling Laws for Microvascular Networks	300
15.2.4	Two-Dimensional Designs	301
15.2.5	Three-Dimensional Designs	302
15.3	Computational Models for Microvascular Networks	303
15.3.1	Fluid Mechanics of Microvasculature	303
15.3.2	Complex Fluid Mechanical Phenomena	304
15.3.3	The Role of Shear Stress	304
15.4	Microfabrication Technology for Vascular Network Formation	305
15.4.1	Polymer Micromolding of Scaffolding Layers for Vascular Networks	306
15.4.2	Biodegradable Systems	308
15.4.3	Applications of Microvascular Network Systems	309
15.5	Conclusion	311
	Acknowledgments	311
	References	311

## **CHAPTER 16**

	<b>Nanotechnology for Inducing Angiogenesis</b>	<b>317</b>
16.1	Introduction	317
16.2	Nanostructured Scaffolds and Angiogenesis	320
16.2.1	Electrospinning	320
16.2.2	Self-Assembly	326
16.2.3	Chemical Etching	328
16.2.4	Lithographic Techniques	330
16.2.5	Polymer Demixing	330
16.3	Functionalized Smooth Surfaces and Angiogenesis	332
16.4	Conclusion	334
	References	335

## **CHAPTER 17**

<b>Micropatterning Approaches for Cardiac Biology</b>	<b>341</b>
17.1 Introduction	341
17.2 Isolation and Culture of Cardiac Myocytes	343
17.2.1 Harvesting and Isolating NNRVMs	343
17.3 Engineering the Cellular Microenvironment In Vitro	345
17.3.1 Microabrasion of the Cardiac Myocyte Culture Substrate	345
17.3.2 Microcontact Printing and Soft Lithography	346
17.3.3 Procedure for Microcontact Printing of ECM Proteins	348
17.4 Traction Force Microscopy for Cardiac Myocytes	352
17.4.1 Substrate Preparation for Traction Force Microscopy	353
17.4.2 Identification and Tracking of Fluorescent Beads	354
17.4.3 Calculation of Traction Forces	354
17.5 Conclusions and Future Perspectives	356
Acknowledgments	357
References	357

## **CHAPTER 18**

<b>Microreactors for Cardiac Tissue Engineering</b>	<b>361</b>
18.1 Introduction	361
18.2 Patterned Cardiomyocyte Cultures in Two Dimensions	362
18.3 Patterned Cardiomyocyte Cultures in Three Dimensions	364
18.3.1 Cardiac Organoids	364
18.3.2 Cardiac Tissue Engineering	366
18.4 Microsystems for Co- and Tricultures in Two and Three Dimensions	368
18.5 Microbioreactors for Culture of Cardiac Organoids	372
18.5.1 Mechanical Stimuli	372
18.5.2 Electrical Stimuli	376
18.5.3 Biochemical Stimuli	379
18.6 Microfluidic Devices for Cardiac Cell Separation	381
18.6.1 Size-Based Separation	383
18.6.2 Adhesion-Based Separation	385
18.7 Looking Forward	387
18.8 Conclusion	388
References	389

## **CHAPTER 19**

<b>Nanoengineered Hydrogels for Stem Cell Cartilage Tissue Engineering</b>	<b>395</b>
19.1 Hydrogel Microenvironments	395
19.1.1 Natural and Synthetic Hydrogel Scaffolds	395
19.1.2 Methods to Form Hydrogels	398
19.1.3 Hydrogels for Cartilage Tissue Engineering	401
19.2 Stem Cell Encapsulation in Hydrogels	402
19.2.1 Stem Cells	402
19.2.2 Controlling Stem Cell Differentiation in Hydrogel Microenvironments	404

19.2.3	Unique Requirements and Responses of Stem Cells in Hydrogels	405
19.3	Coculture Microenvironments for Directing Stem Cell Differentiation and Tissue Development	406
19.3.1	Novel Systems for Three-Dimensional Cell Coculture	406
19.3.2	Coculture Systems to Direct Embryonic Stem Cell Differentiation	408
	References	409

## **CHAPTER 20**

	Microscale Approaches for Bone Tissue Engineering	417
20.1	Introduction	417
20.2	Importance of Cell-Cell Interactions for Regulating Osteogenesis	418
20.3	Use of Substrate Properties to Control Osteogenesis	420
20.3.1	Micro- and Nanotopography	420
20.3.2	Substrate Mechanical Properties	422
20.3.3	Substrate Composition and Shape	422
20.4	Techniques for Translating Two-Dimensional Systems to Three-Dimensional Scaffolds	423
20.5	Conclusion	425
	References	426

## **CHAPTER 21**

	Nanoengineering for Bone Tissue Engineering	431
21.1	Introduction	431
21.1.1	Problems with the Current Orthopedic Implants	431
21.1.2	Reasons for Implant Failures	432
21.2	The Role of Nanomaterials in Orthopedic Implants	436
21.2.1	Ceramics	437
21.2.2	Metals	442
21.2.3	Polymers	446
21.2.4	Composites	448
21.2.5	Role of Chemistry	450
21.3	Future Challenges	452
	References	454

## **CHAPTER 22**

	Bioinspired Engineered Nanocomposites for Bone Tissue Engineering	461
22.1	Introduction	461
22.2	Bone Structure	461
22.3	Degradable Polymers as Scaffolds for Bone Regeneration	463
22.4	Degradable Composite Scaffolds for Bone Regeneration	464
22.5	Collagen nanostructure and its effect on differentiation of bone marrow stromal cells	465
22.6	Biomimetic Hydrogel Nanocomposites for Bone Regeneration	470
22.7	Conclusion	474
	Acknowledgments	475

**CHAPTER 23**

Technological Approaches to Renal Replacement Therapies	483
23.1 Introduction	483
23.2 Kidney Functioning Overview	484
23.3 Kidney Failure	486
23.4 Treatments	487
23.4.1 Kidney Transplantation	487
23.4.2 Peritoneal Dialysis	488
23.4.3 Hemodialysis	489
23.5 History of Hemodialysis	490
23.6 Dialyzer Improvements	492
23.7 Innovative Hemodialysis Approaches	493
23.8 Conclusion	499
References	499

**CHAPTER 24**

Engineering Pulmonary Epithelia and Their Mechanical Microenvironments	503
24.1 Introduction	503
24.2 The Lung and Pulmonary Epithelial Cells	505
24.2.1 Tracheobronchial Epithelial Cells	506
24.2.2 Bronchiolar Epithelial Cells	507
24.2.3 Alveolar Epithelial Cells	507
24.3 In Vitro Production and Engineering of Pulmonary Epithelium	508
24.3.1 Engineering of Primary Airway Epithelial Cell Culture	508
24.3.2 Engineering of Primary Alveolar Epithelial Cell Culture	510
24.4 Engineering of Cell-Matrix and Cell-Cell Interactions	512
24.4.1 Cyclic Stretch in Two-Dimensional Culture	512
24.4.2 Static Stretch or Pressure in Two-Dimensional Culture	514
24.4.3 Mechanical Stretch in Three-Dimensional Culture	515
24.4.4 Direct Mechanical Stimulation of Single Cells	515
24.5 Engineering of Cell-Fluid Interactions	516
24.5.1 In Vitro Airway Reopening Models	516
24.5.2 Application of Air-Flow-Induced Shear Stresses to Pulmonary Epithelial Cells	518
24.5.3 Exposure of Pulmonary Epithelial Cells to Gaseous Compounds	519
24.5.4 Cell Culture Analog Bioreactors	520
24.6 Measurements of Mechanically Induced Inflammatory Responses	521
24.6.1 Inflammatory Mediators	521
24.6.2 Cytokine Release Induced by Mechanical Stimulation	522
24.7 Conclusion	524
References	526

## **CHAPTER 25**

<b>Microfabricated Systems for Analyzing Immune-Cell Functions</b>	<b>535</b>
25.1 Introduction	535
25.2 Micro- and Nanopatterned Surfaces as Tools to Dissect Immune-Cell Functions	536
25.2.1 Engineered Surfaces as Ligand Presentation Surrogates	536
25.2.2 Micron- and Submicron-Ligand Patterning to Model Cellular Activation by Immune Complexes	540
25.2.3 Patterned Surfaces as Models to Probe Structure-Function Relationships of the T Cell Immunological Synapse	541
25.3 Single-Cell Microarrays: Microwells and Microchambers for Assaying the Functions of Individual Lymphocytes	544
25.4 Control of Immune-Cell Migration in Model Microenvironments	548
25.4.1 Creating Temporally Stable, Defined Chemoattractant Gradients Using Microfluidic Devices	548
25.4.2 Engineering Chemoattractant Gradients Using Controlled-Release Microspheres	550
25.5 Conclusions and Outlook	551
Acknowledgments	551
References	551

## **CHAPTER 26**

<b>Microscale Hepatic Tissue Engineering</b>	<b>557</b>
26.1 Introduction	557
26.2 Strategies for Developing Stable Hepatocyte Culture Models	558
26.2.1 Effect of Three-dimensional Layering	559
26.2.2 Micropatterning of Hepatocytes and Nonparenchymal Cells	561
26.3 Bioartificial Liver Devices	563
26.4 Hepatic Constructs for Transplantation	565
26.5 Liver-Cell Microarrays	566
26.5.1 Hepatic Microarrays for Screening Under Static Conditions	566
26.5.2 Microfluidics Incorporated Hepatic Microarrays	568
26.6 Summary	571
References	572

## **CHAPTER 27**

<b>Nano- and Microtechnologies for the Development of Engineered Skin Substitutes</b>	<b>579</b>
27.1 Overview	579
27.1.1 Clinical Need for Engineered Skin Substitutes	579
27.1.2 Current Strategies for Engineered Skin Substitutes	580
27.2 Nano- and Microscale Approaches to Producing Engineered Skin Substitutes	581
27.2.1 Engineered Skin Substitutes: Clinical and Design Considerations	581
27.2.2 Engineered Epidermal Substitutes	581
27.2.3 Engineered Dermal Substitutes	584

27.2.4	Composite Skin Substitutes	588
27.3	Nano- and Microscale Approaches for Controlling Cellular Microenvironments	590
27.3.1	Nano- and Microfabricated Surfaces to Characterize Cell Function	590
27.3.2	Microtextured Surfaces to Characterize Keratinocyte Function in Stem Cell Niches	592
27.4	Future Considerations	592
	Acknowledgments	593
	References	593
	 About the Editors	 601
