List of contributors	xiii
1. GEOPHYSICS OF THE CONTINENTAL MANTLE: AN HISTORICAL PERSPECTIVE	1
<i>Don L. Anderson</i>	
1.1. Introduction	1
1.2. Early views of the upper mantle	3
1.3. Upper mantle beneath continents	6
1.4. High-resolution upper mantle models	7
1.5. The shallow mantle	8
1.6. Heat flow	9
1.7. Deep continental roots	11
1.8. The elastic or flexural thickness of the continental lithosphere	13
1.9. The mineralogy of the continental lithosphere	14
1.10. Attenuation of seismic waves and electrical conductivity	16
1.11. Seismic tomography	16
1.12. Lower mantle	17
1.13. Plate reconstructions	23
1.14. Formation of the continental lithosphere	25
1.15. Evolution of the mantle	26
1.16. Concluding statement	27
2. PETROLOGY AND GEOCHEMISTRY OF THE CONTINENTAL MANTLE: AN HISTORICAL PERSPECTIVE	31
<i>Martin A. Menzies</i>	
2.1. Introduction	31
2.2. Lithosphere and asthenosphere	31
2.3. Petrology of the continental mantle	31
2.4. Geochemistry of the continental mantle—mantle xenoliths	35
2.5. Geochemistry of the continental mantle—basaltic rocks	41
2.6. Concluding statement	43
3. AGE AND EARLY EVOLUTION OF THE CONTINENTAL MANTLE	55
<i>Stephen H. Richardson</i>	
3.1. Introduction	55
3.2. Diamond inclusions and host assemblages	55

3.3.	Age constraints on peridotitic diamond formation	58
3.4.	Peridotitic diamond thermobarometry	60
3.5.	Implications for continental mantle stabilization	61
3.6.	Peridotites, eclogites, and eclogitic diamonds	62
3.7.	Conclusions	63
4.	ARCHAEAN, PROTEROZOIC, AND PHANEROZOIC LITHOSPHERES	67
	<i>Martin A. Menzies</i>	
4.1.	Introduction	67
4.2.	Continental mantle domains	68
4.3.	Temporal and spatial aspects of mantle domain evolution	75
4.4.	Summary	82
5.	REDOX STATE OF THE CONTINENTAL LITHOSPHERE	87
	<i>Stephen E. Haggerty</i>	
5.1.	Introduction	87
5.2.	Redox standards	88
5.3.	Redox state of the upper mantle	88
5.4.	Redox data sets for the upper mantle	92
5.5.	Continental upper mantle redox model	99
5.6.	Conclusions	102
6.	DISTRIBUTION OF FLUIDS IN THE CONTINENTAL MANTLE	111
	<i>E. Bruce Watson, James M. Brennan, and Don R. Baker</i>	
6.1.	Introduction	111
6.2.	Large-scale distribution: nature of fluids at various depths	111
6.3.	Wetting characteristics: grain-scale distribution as dictated by interfacial energy considerations	113
6.4.	Implications of wetting behaviour for upper mantle metasomatism	118
6.5.	Concluding remarks	122
7.	STABLE ISOTOPES IN THE CONTINENTAL LITHOSPHERIC MANTLE	127
	<i>T. Kurtis Kyser</i>	
7.1.	Introduction	127
7.2.	Oxygen isotopes	128
7.3.	Hydrogen isotopes	146

CONTENTS

xi

7.4.	Sulphur isotopes	148
7.5.	Concluding remarks	150
8.	CONTINENTAL VOLCANISM: A CRUST-MANTLE PROBE <i>Martin A. Menzies and Philip R. Kyle</i>	157
8.1.	Introduction	157
8.2.	Volcanic case studies	159
8.3.	Concluding statement	172
	Index	179

The plates for Chapter 6 fall between pp. 114 and 115
