<b>PART ONE. THE ASTRONOMICAL PLANET: EARTH'S PLACE IN THE COSMOS</b>	<b>1</b>
1 An Introductory Tour of Earth's Cosmic Neighborhood	3
1.1 Ancient Attempts to Determine the Scale of the Cosmos	3
1.2 Brief Introduction to the Solar System	4
1.3 Questions	7
1.4 Readings	7
1.4.1 General Reading	7
1.4.2 References	7
2 Largest and Smallest Scales	8
2.1 Introduction	8
2.2 Scientific Notation	8
2.3 Motions of Earth in the Cosmos	8
2.4 Cosmic Distances	13
2.4.1 The Planets	13
2.4.2 Nearby Stars	14
2.4.3 Nearby Galaxies	14
2.4.4 Beyond the Galactic Neighborhood	15
2.4.5 To the Farthest Edge of the Universe	15
2.5 Microscopic Constitution of Matter	17
2.6 Questions	21
2.7 Readings	22
2.7.1 General Reading	22
2.7.2 References	22
3 Forces and Energy	23
3.1 Introduction	23
3.2 Forces of Nature	23
3.3 Radioactivity	28

3.4	Conservation of Energy, and Thermodynamics	29
3.5	Electromagnetic Spectrum	30
3.6	Abundances in the Sun	33
3.7	Questions	34
3.8	Readings	34
4	Fusion, Fission, Sunlight, and Element Formation	35
4.1	Introduction	35
4.2	Stars and Nuclear Fusion	35
4.3	Element Production in the Big Bang	38
4.4	Element Production During Nuclear Fusion in Stars	39
4.5	Production of Other Elements in Stars: $s$ , $r$ , and $p$ Processes	40
4.6	Nonstellar Element Production	42
4.7	Element Production and Life	42
4.8	Questions	43
4.9	Readings	43
4.9.1	General Reading	43
4.9.2	References	44
	<b>PART TWO. THE MEASURABLE PLANET: TOOLS TO DISCERN THE HISTORY OF EARTH AND THE PLANETS</b>	<b>45</b>
5	Determination of Cosmic and Terrestrial Ages	47
5.1	Overview of Age Dating	47
5.2	The Concept of Half-Life	47
5.3	Carbon-14 Dating	49
5.4	Measurement of Parents and Daughters: Rubidium-Strontium	51
5.5	Caveat Emptor	52
5.6	Questions	53
5.7	Readings	53
5.7.1	General Reading	53
5.7.2	References	53
6	Other Uses of Isotopes for Earth History	54
6.1	Introduction	54
6.2	Stable Isotopes, Seafloor Sediments, and Climate	54
6.2.1	Carbon	54
6.2.2	Oxygen	54
6.2.3	Hydrogen	55
6.3	A Possible Temperature History of Earth from Cherts	56
6.4	Questions	58
6.5	Readings	58
7	Relative Age Dating of Cosmic and Terrestrial Events: The Cratering Record	60
7.1	Introduction	60
7.2	Process of Impact Cratering	60
7.3	Using Craters to Date Planetary Surfaces	63
7.3.1	Relative Ages of Events on a Planetary Surface	66
7.3.2	Absolute Chronology of Solar System Events	69

7.4	Cratering on Planetary Bodies with Atmospheres	73
7.5	Impactors Through Time	73
7.6	Questions	73
7.7	Readings	74
8	Relative Age Dating of Terrestrial Events: Geologic Layering and Geologic Time	75
8.1	Introduction	75
8.2	Catastrophism versus Uniformitarianism	75
8.3	Estimating the Age of Earth, without Radioisotopes	75
8.4	Geologic Processes and Their Cyclical Nature	76
8.5	Principles of Geologic Succession	78
8.6	Fossils	79
8.7	Radioisotopic Dating of Earth Rocks	81
8.8	Geologic Timescale	82
8.9	A Grand Sequence	82
8.10	The Geologic Timescale as a Map	82
8.11	Questions	84
8.12	Readings	84
	8.12.1 General Reading	84
	8.12.2 References	84
9	Plate Tectonics: An Introduction to the Process	85
9.1	Introduction	85
9.2	Early Evidence for and Historical Development of Plate Tectonics	85
9.3	Genesis of Plate Tectonics After World War II	86
	9.3.1 Seafloor Topography	86
	9.3.2 Magnetic Imprints on Rocks	86
	9.3.3 Geologic Record on Land	91
	9.3.4 Earthquakes and Subduction	91
9.4	The Basic Model of Plate Tectonics	93
9.5	Past Motions of the Plates and Supercontinents	95
9.6	Driving Forces of Plate Motions	96
9.7	An End to Techniques and the Start of History	98
9.8	Questions	98
9.9	Readings	98
	9.9.1 General Reading	98
	9.9.2 References	98
	<b>PART THREE. THE HISTORICAL PLANET: EARTH AND SOLAR SYSTEM THROUGH TIME</b>	99
10	Formation of the Solar System	101
10.1	Introduction	101
10.2	Timescale of Cosmological Events Leading Up to Solar System Formation	101
10.3	Formation of Stars and Planets	102
	10.3.1 Molecular Clouds and Star Formation	102

10.3.2	The Start of Star Formation	102
10.3.3	A Star Is Born	103
10.3.4	Figure Skaters and Astrophysicists: The Formation of Planets	104
10.3.5	Disks Around Protostars – the Source of Planets?	105
10.3.6	The End of Planet Formation	107
10.4	Primitive Material Present in the Solar System Today	107
10.4.1	Remnants of the Beginning: Meteorites	108
10.4.2	Comets and Kuiper Belt Objects	109
10.4.3	Interplanetary Dust Particles	111
10.5	The Search for Other Planetary Systems	111
10.5.1	Indirect Techniques	112
10.5.2	Direct Techniques	113
10.6	Summary of Planet Formation	114
10.7	Questions	114
10.8	Readings	114
10.8.1	General Reading	114
10.8.2	References	114
11	The Hadean Earth	115
11.1	Introduction	115
11.2	Bulk Composition of the Planets	115
11.2.1	Solid Planets	116
11.2.2	The Giant Planets	118
11.3	Internal Structure of Earth	120
11.4	Accretion: The Building Up of Planets	123
11.5	Early Differentiation After Accretion	124
11.6	Radioactive Heating	125
11.7	Formation of an Iron Core	127
11.8	Formation of the Moon	127
11.9	Origin of Earth's Atmosphere, Ocean, and Organic Reservoir	130
11.10	From the Hadean into the Archean: Formation of the First Stable Continental Rocks	132
11.11	Questions	132
11.12	Readings	132
11.12.1	General Reading	132
11.12.2	References	132
12	The Archean Eon and the Origin of Life: I. Properties of and Sites for Life	134
12.1	Introduction	134
12.2	Definition of Life and Essential Workings	134
12.2.1	What Is Life?	134
12.2.2	Basic Structure of Life	136
12.2.3	Information Exchange and Replication	136
12.2.4	Formation of Proteins	137
12.2.5	Mutation and Genetic Variation	138
12.3	The Basic Unit of Living Organisms: The Cell	138

12.4	Energetic Processes That Sustain Life	139
12.4.1	Common Metabolic Mechanisms	139
12.4.2	Photosynthesis	139
12.5	Other Means of Utilizing Energy	141
12.6	Elemental Necessities of Life: A Brief Examination	142
12.6.1	Why Carbon?	142
12.6.2	Why Water?	143
12.6.3	Is Free Oxygen Essential?	143
12.7	Solar System Sites for Life	144
12.7.1	Atmospheres of the Giant Planets	144
12.7.2	Interior of Europa	144
12.7.3	Titan	145
12.7.4	The Mars of Today and Yesterday	145
12.7.5	Earth	151
12.8	Questions	152
12.9	Readings	152
12.9.1	General Reading	152
12.9.2	References	152
13	The Archean Eon and the Origin of Life: II. Mechanisms	153
13.1	Introduction	153
13.2	Thermodynamics and Life	153
13.3	The Raw Materials of Life: Synthesis and the Importance of Handedness	155
13.4	Two Approaches to Life's Origin	156
13.5	The Vesicle Approach and Autocatalysis	156
13.6	The RNA World: A Second Option	158
13.6.1	The Promise: RNA as Replicator and Catalyst	158
13.6.2	The Problem: Invention of RNA	159
13.7	The Essentials of a Cell and the Unification of the Two Approaches	161
13.8	The Archean Situation	163
13.9	Questions	164
13.10	Readings	164
14	The First Greenhouse Crisis: The Faint Early Sun	165
14.1	The Case for an Equable Climate in the Archean	165
14.2	The Faint Early Sun	165
14.3	The Greenhouse Effect	166
14.4	Primary Greenhouse Gases	169
14.5	Implications for Earth During the Faint-Early-Sun Era	169
14.6	Paleosols and the Carbon Dioxide Abundance	171
14.7	Carbon Dioxide Cycling and Early Crustal Tectonics	172
14.7.1	Basic Carbon-Silicate Weathering Cycle	172
14.7.2	Negative Feedbacks in the Carbon-Silicate Cycle	173
14.7.3	The Carbon-Silicate Cycle During the Archean	174
14.8	A Balance Unique to Earth, and a Lingerin Conundrum	174
14.9	Questions	176

---

14.10	Readings	176
14.10.1	General Reading	176
14.10.2	References	176
15	Climate Histories of Mars and Venus, and the Habitability of Planets	177
15.1	Introduction	177
15.2	Venus	177
15.2.1	Origin of Venus' Thick Atmosphere	177
15.2.2	Overview of the Surface of Venus	181
15.3	Mars	183
15.3.1	Mars Today	183
15.3.2	Geological Hints of a Warmer Early Mars	183
15.4	Was Mars Really Warm in the Past?	188
15.4.1	Limits to a Carbon Dioxide Greenhouse	188
15.4.2	Abodes for Life on Early Mars	189
15.4.3	Searching for Evidence of Life, and the Early Climate	190
15.5	Putting a Martian History Together	190
15.6	Implications of Venusian and Martian History for Life Elsewhere	191
15.7	The Finite Life of Our Biosphere	193
15.8	Questions	193
15.9	Readings	195
16	Earth in Transition: From the Archean to the Proterozoic	196
16.1	Introduction	196
16.2	Abundances of the Elements in Terrestrial Rocks	196
16.3	Mineral Structure	197
16.4	Partial Melting and the Formation of Basalts	198
16.5	Formation of Andesites and Granites	200
16.5.1	Rock Relationships	200
16.5.2	Seismic Waves and Composition	200
16.5.3	Role of Water in Partial Melting	200
16.5.4	The Puzzle of Granite Formation	201
16.6	Formation of Protocontinents in the Archean	203
16.7	The Archean-Proterozoic Transition	204
16.8	After the Proterozoic: Modern Plate Tectonics	206
16.9	Venus: An Earth-Sized Planet without Plate Tectonics	206
16.10	Water and Plate Tectonics	208
16.11	Continents, the Moon, and the Length of Earth's Day	209
16.12	Entree to the Modern World	210
16.13	Questions	210
16.14	Readings	210
16.14.1	General Reading	210
16.14.2	References	210

17	The Oxygen Revolution	211
17.1	Introduction	211
17.2	Modern Oxygen Cycle	211
17.3	Oxygen Balance with and without Life	213
17.4	Limits on the Oxygen Levels on Early Earth	213
17.4.1	Minerals Unstable in the Presence of Oxygen	213
17.4.2	Banded Iron Formation	214
17.4.3	Redbeds	215
17.4.4	Fossils of Aerobic Organisms	215
17.5	History of the Rise of Oxygen	215
17.6	Balance Between Oxygen Loss and Gain	215
17.7	Reservoirs of Oxygen and Reduced Gases	217
17.8	History of Oxygen on Earth	218
17.8.1	Stage 1	218
17.8.2	Stage 2	218
17.8.3	Stage 3	219
17.8.4	Stage 4	219
17.9	Shield Against Ultraviolet Radiation	219
17.10	Onset of Eukaryotic Life	220
17.11	Questions	222
17.12	Readings	222
18	The Phanerozoic: Flowering and Extinction of Complex Life	223
18.1	Introduction to the Phanerozoic	223
18.2	Evolution	225
18.2.1	Traditional, Darwinian, Model of Evolution	225
18.2.2	Punctuated Equilibrium Approach to Evolution	226
18.3	Vendian-Cambrian Revolution	229
18.3.1	Taxonomy for the Restless	229
18.3.2	Establishment of the Basic Plans	229
18.3.3	Clues from the Vendian	230
18.3.4	Causes of the Vendian-Cambrian Revolution	230
18.3.5	Why Has It Not Happened Again?	232
18.4	Mass Extinction Events in the Phanerozoic	232
18.5	Cretaceous-Tertiary Extinction	232
18.5.1	Boundary Sediments	233
18.5.2	Interpretation of the K/T Boundary as an Impact Event	234
18.5.3	Biological Effects of the Impact	235
18.5.4	Where Is the Crater?	237
18.5.5	Impacts and Other Extinction Events	238
18.6	Questions	239
18.7	Readings	239
18.7.1	General Reading	239
18.7.2	References	239

19	Climate Change Across the Phanerozoic	240
19.1	Introduction	240
19.2	The Supercontinent Cycle	240
19.3	Effects of Continental Breakups and Collisions	242
19.4	Evidence of Ice Ages on Earth	243
19.5	Causes of the Ice Ages	243
19.5.1	Positive Feedbacks in the Basic Climate System	243
19.5.2	Negative Feedbacks in the Climate System	244
19.5.3	Additional Influences on Global Glaciation	244
19.5.4	Snowball Earth?	245
19.6	Cretaceous Climate	245
19.6.1	Evidence for the Cretaceous Climate Pattern	245
19.6.2	Plate Tectonic Effects on Cretaceous Climate Change	246
19.6.3	Additional Important Effects on Cretaceous Climate	246
19.6.4	Causes for Climate Change That Probably Are Not Important in the Cretaceous	246
19.6.5	Model for the Warm Cretaceous	247
19.7	The Great Tertiary Cooldown	248
19.8	Causes of the Pleistocene Ice Age and Its Oscillations	249
19.9	Saved From Instability: Earth's versus Mars' Orbital Cycle	252
19.10	Effects of the Pleistocene Ice Age: A Preview	253
19.11	Questions	253
19.12	Readings	253
20	Toward the Age of Humankind	255
20.1	Introduction	255
20.2	Pleistocene Setting	255
20.3	The Vagaries of Understanding Human Origins	255
20.4	Humanity's Taxonomy	256
20.5	The First Steps: Australopithecines	256
20.6	The Genus <i>Homo</i> : Out of Africa I	257
20.7	Out of Africa II	258
20.8	Final Act: Neanderthals and an Encounter with Our Humanity	260
20.8.1	Climate Setting	260
20.8.2	Physical Features of Neanderthals	262
20.8.3	Neanderthal Lifestyle	263
20.8.4	Interaction of Neanderthals with Moderns	264
20.8.5	Who Were the Neanderthals?	265
20.9	This Modern World	266
20.10	Questions	266
20.11	Readings	266
20.11.1	General Reading	266
20.11.2	References	266
	<b>PART FOUR. THE ONCE AND FUTURE PLANET</b>	267
21	Climate Change Over the Past 100,000 Years	269
21.1	Introduction	269

21.2	The Record in Ice Cores	269
21.3	Climate from Plant Pollen and Packrat Midden Studies	272
21.4	Tree Rings	273
21.5	Climate Variability in the Late Holocene	277
21.6	The Younger Dryas: A Signpost for the Oceanic Role in Climate	278
21.7	Into the Present	279
21.8	Questions	280
21.9	Readings	280
21.9.1	General Reading	280
21.9.2	References	280
22	Human-Induced Global Warming	281
22.1	The Records of CO <sub>2</sub> Abundance and Global Temperatures in Modern Times	281
22.2	Modeling the Response of Earth to Increasing Amounts of Greenhouse Gases	283
22.2.1	Review of Basic Greenhouse Physics	283
22.2.2	Some Complications	284
22.2.3	General Circulation Models	285
22.3	Predicted Effects of Global Warming	287
22.3.1	Large Stratospheric Cooling	287
22.3.2	Global Mean Surface Temperature Warming	289
22.3.3	Global Mean Increase in Precipitation	289
22.3.4	Northern Polar Winter Surface Warming	289
22.3.5	Rise in Global Mean Sea Level	289
22.3.6	Summer Continental Warming and Increased Dryness	289
22.3.7	Regional Vegetation Changes	290
22.3.8	More Severe Precipitation Events	290
22.3.9	Changes in Climate Variability	290
22.3.10	Regional-Scale Changes Will Look Very Different from the Global Average, but Their Nature Is Uncertain	290
22.3.11	Biosphere-Climate Feedbacks	290
22.3.12	Details of Life in the Next Quarter Century	290
22.4	The Difficulty of Proof: Weather versus Climate	291
22.5	Role of the Oceans in Earth's Climate	292
22.5.1	Basics of Ocean Circulation	293
22.5.2	El Niño Phenomenon	294
22.5.3	Prolonged Global Warming and Ocean Circulation Shutdown	295
22.6	Global Warming: A Long-Term View	295
22.7	Postscript: Human Effects on the Upper Atmosphere – Ozone Depletion	295
22.8	Questions	296
22.9	Readings	296
23	Limited Resources: The Human Dilemma	298
23.1	The Expanding Human Population	298

23.2	Prospects for Agriculture	299
23.3	Energy Resources	300
23.3.1	Fossil Fuels	300
23.3.2	The Challenges of Fossil Fuels	302
23.3.3	Alternative Energy Sources	303
23.3.4	Energy Use in the Future	303
23.4	Economically Important Minerals	305
23.5	Pollution	306
23.6	Can We Go Back?	307
23.7	Questions	308
23.8	Readings	308
23.8.1	General Reading	308
23.8.2	References	308
24	Coda: The Once and Future Earth	309
