

CONTENTS

Preface	xiii
Introduction	1
<i>0-1</i> Some Perspectives	1
<i>0-2</i> Principal Subdivisions of the Earth's Interior	3
References	7
Part One Crust and Upper Mantle	
1 Mineral Stability Fields in Some Key Crustal Rock Types	11
<i>1-1</i> Introduction	11
<i>1-2</i> Experimental Investigations on the Gabbro-Eclogite Transformation	12
<i>1-3</i> Petrological Applications	19
<i>1-4</i> Changes in Physical Properties Associated with the Transformation	27
<i>1-5</i> Stability Fields in Acid-Intermediate Rocks	29
References	32
	vii

2	Composition of the Crust	35
2-1	The Crust in Stable Continental Regions	35
2-2	The Crust in Continental Orogenic Regions	47
2-3	The Oceanic Crust	51
2-4	The Nature of the Mohorovicic Discontinuity	60
	References	66
3	Composition of the Upper Mantle	74
3-1	Introduction	74
3-2	Diagnostic Physical Criteria	75
3-3	Significance of Alpine Peridotites and Ophiolite Complexes	85
3-4	Xenoliths of Mantle Origin	100
	References	114
4	Origin of Basaltic Magmas	123
4-1	Introduction	123
4-2	Crystallization Equilibria in Tholeiites and Alkali Olivine Basalt at High Pressures and Temperatures	130
4-3	Experimental Data Bearing on the Relationships of Alkali Olivine Basalts, Basanites, and Nephelinites	138
4-4	Direct Evidence of the Role of High-Pressure Aluminous Pyroxene Fractionation in the Petrogenesis of Alkali Basalts	141
4-5	Generation of Basaltic Magmas by Partial Melting in the Mantle	143
4-6	Partial Melting and Fractional Crystallization in Basalt Petrogenesis	157
4-7	Petrogenetic Hypothesis of M. J. O'Hara	166
	References	172
5	The Pyrolite Model	176
5-1	Introduction	176
5-2	Composition of Pyrolite	180
5-3	Pyrolite Mantle and the Chondritic Earth Model	189
5-4	Oceanic Tholeiites and the Pyrolite Model	195
5-5	Thermal History of the Earth	199
	References	201
6	Constitution of the Upper Mantle	206
6-1	Seismic Structure	206
6-2	Petrological Zoning	211
6-3	The Low-Velocity Zone	221
	References	227

7 The Orogenic Igneous Rock Association	232
7-1 Introduction	232
7-2 Mineralogy and Chemistry of Orogenic Volcanic Series	233
7-3 Space-Time Relationships	241
7-4 Crystallization Behaviour at Atmospheric Pressure	243
7-5 Early Theories of Origin of Orogenic Volcanic Series	245
7-6 Formation of Orogenic Volcanic Series by Partial Melting of Mantle Under High Water Pressure	249
7-7 Role of Water in Formation of Orogenic Magmas: Amphibole Fractionation	255
7-8 Role of Eclogite Fractionation	266
7-9 The Plutonic Orogenic Series	274
References	277
 8 Petrologic Evolution of the Crust and Upper Mantle	 284
8-1 Introduction	284
8-2 Some Geophysical Characteristics of Subduction Zones	287
8-3 Petrogenesis of Magmas in the Island-Arc Environment	291
8-4 Evolution of the Crust	298
8-5 Differentiation of the Upper Mantle	304
8-6 Origin of the Mohorovicic Discontinuity	309
8-7 Plate Tectonics and the Deep Mantle	310
References	318
 Part Two The Deep Mantle	
 9 Some Inferences from Geophysics	 325
9-1 Introduction	325
9-2 Density Distribution and Inhomogeneity in the Deep Mantle	328
9-3 Elasticity	330
9-4 Empirical Velocity-Density Relationships	337
9-5 Electrical Conductivity of the Mantle	347
References	348
 10 Experimental Methods of Investigating Mantle Phase Transformations	 353
10-1 Introduction	353
10-2 Indirect Methods	354
10-3 Summary of Results by Indirect Methods 1952-1965	363
10-4 Direct Methods of Studying Mantle Phase Transformations	365
References	382

11 High-Pressure Transformations in A_2BO_4 Compounds	387
<i>11-1 The Olivine-Spinel-Beta Phase Transformations</i>	388
<i>11-2 The System Mg_2SiO_4-Fe_2SiO_4</i>	397
<i>11-3 The Transformation of Olivine in the Mantle</i>	402
<i>11-4 Transformation of Spinel and Beta Phases to Strontium Plumbate Structure</i>	404
<i>11-5 Disproportionation of $A_2^{2+}B_2^{4+}O_4$ Spinel at High Pressure</i>	407
<i>11-6 Transformations in $A^{++}B_2^{3+}O_4$ Spinel</i>	410
<i>11-7 Further Transformations in Olivines</i>	414
<i>11-8 Possible Transformations of Mg_2SiO_4 to Structures Denser than Isochemical Mixtures of $MgO + SiO_2$</i>	414
<i>11-9 Density Relationships Among A_2BO_4 Structure Types</i>	417
References	421
12 High-Pressure Transformations in ABO_3-Type Compounds	426
<i>12-1 Disproportionation of Pyroxenes into Spinel + Rutile Structures</i>	427
<i>12-2 The Pyroxene-Ilmenite Transformation</i>	429
<i>12-3 The Pyroxene-Garnet Transformation</i>	432
<i>12-4 The Garnet-Ilmenite Transformation</i>	442
<i>12-5 Transformation of Garnets and Ilmenites to Perovskite-Type Structures</i>	446
<i>12-6 Relative Volumes of ABO_3 Structures</i>	451
<i>12-7 Significance of Pyroxene-Ilmenite Intergrowths Among Kimberlite Xenoliths</i>	453
References	457
13 Miscellaneous Transformations	461
<i>13-1 Transformations in Alkali Aluminosilicates and Aluminogermanates</i>	461
<i>13-2 High-Pressure Hydrated Magnesium Silicates</i>	467
<i>13-3 Transformations in Al, Sc, In, Zr, and Hf Silicates</i>	469
<i>13-4 Transformations in Some Simple Oxides</i>	471
References	477
14 Constitution of the Deep Mantle	481
<i>14-1 Chemical Composition</i>	481
<i>14-2 Seismic Velocity Distributions</i>	483
<i>14-3 Mineralogy in a Pyrolite Mantle as a Function of Depth</i>	487
<i>14-4 Magnitude of Velocity Changes Caused by Mantle Phase Transformations</i>	495
<i>14-5 Density of the Lower Mantle</i>	499

<i>14-6 Elasticity of the Lower Mantle</i>	503
<i>14-7 Conclusion</i>	509
References	510
15 Phase Transformations and Mantle Dynamics	515
<i>15-1 Introduction</i>	515
<i>15-2 Convection Currents and the Passive Plate Theory</i>	517
<i>15-3 Thermal Structure of Plates</i>	523
<i>15-4 Active Plate Theory</i>	526
<i>15-5 Phase Transformations and Deep Earthquakes</i>	531
<i>15-6 Other Effects Associated with Phase Transformations</i>	535
References	539
16 Mantle Composition and the Earth's Origin	544
<i>16-1 Introduction</i>	544
<i>16-2 Cosmochemical Aspects of the Pyrolite Composition</i>	546
<i>16-3 Homogeneous Accretion Hypotheses</i>	549
<i>16-4 Modified Homogeneous Accretion Hypothesis</i>	552
<i>16-5 The Heterogeneous Accumulation Hypothesis</i>	554
<i>16-6 Planet Accretion in a Cool Solar Nebula</i>	563
<i>16-7 Single-Stage Hypothesis for the Origin of the Earth</i>	569
<i>16-8 Origin of the Moon</i>	585
<i>16-9 Modified Single-Stage Hypothesis</i>	591
References	597
Index	605
