Preface	VII
Acknowledgements	IX
List of Contributors	X

SECTION I. VOLCANISM AND FORECASTING

<i>Chapter 1. Volcanological forecasting and medical diagnosis: similarities .</i>	3
H. Tazieff	

<i>Chapter 2. Some general points about volcanism</i>	9
H. Tazieff	

Volcanoes and magmas	9
Tectonic setting of volcanoes	11
Active volcanoes	12
Magma ascent	14
Fumaroles	15
Types of eruptions	15

<i>Chapter 3. Volcano energetics: volcanic gases and vapours as geothermometers and geobarometers</i>	17
J.C. Sabroux	

Introduction	17
Volcano energy	17
Temperature and pressure of volcanic processes	19
Geothermometry and geobarometry	20
The evolution of a magmatic gas phase	20
The volcanic plumes	24
Conclusion	25

<i>Chapter 4. The energy of volcanic processes</i>	27
R. Scandone	

Introduction	27
------------------------	----

XIV

Energy of volcanic eruptions	27
Mechanisms of eruption	32
Trends in the energy budget of volcanoes	34
Conclusions	40

SECTION II. ERUPTIVE HAZARDS

<i>Chapter 5. Eruptive hazards</i>	<i>45</i>
H. Tazieff	

Eruption phenomenology	46
Pyroclastic products	50
Phreatic eruptions	53
Secondary hazards	54
Conclusion	55

<i>Chapter 6. Problems related with the evaluation of volcanic risk</i>	<i>57</i>
R. Scandone	

Introduction	57
Eruptive probabilities	59
Elements of cost-benefit analysis	62
Damage caused by an eruption	64
Conclusions	67

<i>Chapter 7. Health risks linked with inhalation of volcanic gases and aerosols</i>	<i>69</i>
R. Faivre-Pierret and F. Le Guern	

Volcanic gases	69
Appraisal of gas concentrations in a volcanic plume	70
Carbon compounds	71
Sulfur gases	75
Hydrogen halides	77
Lack of oxygen	78
Aerosols	79
Conclusions	81
Acknowledgement	81

<i>Chapter 8. Studies of lava flow development</i>	83
C.R.J. Kilburn	
Introduction	83
Empirical considerations of flow development	84
Theoretical considerations of flow development	87
Aspects of flow management	94
Concluding comments	97
Acknowledgement	98
 <i>Chapter 9. Volcanic hazard on Sao Miguel, Azores</i>	99
B. Booth, R. Croasdale and G.P.L. Walker	
Introduction	99
Trachytic eruptions (Type 1)	99
Strombolian type basaltic eruptions (Type 2)	107
Surtseyan type basaltic eruptions (Type 3)	108
The aftermath of an eruption	108
 <i>Chapter 10. Appraisal and zonation of volcanic hazards in the French Lesser Antilles: preliminary results</i>	111
D. Westercamp	
Introduction	111
The programme	111
Appraisal of hazards	113
Zonation of hazards: general comments	114
Zonation of flows	114
Zonation of air-fall products	122
Zonation of pyroclastic surges and blasts	127
Conclusion	130
Additional reference	130
 <i>Chapter 11. Volcano surveillance and volcanic hazard assessment in the Etnean area</i>	131
L. Villari	
Introduction	131
Geological and structural framework	131
Volcanic activity	136
Volcano surveillance	138

XVI

Volcanic hazard	144
Conclusion	146

<i>Chapter 12. Volcanic hazard zonation: Mt. Vesuvius</i>	<i>149</i>
<i>F. Barberi, M. Rosi, R. Santacroce and M.F. Sheridan</i>	

Introduction	149
Volcanic history and hazards of Vesuvius	149
Hazard from lava flows and cinder cone	152
The Plinian eruptions	154
Hazard from Plinian eruptions	155
Conclusions	161
Acknowledgement	161

SECTION III. MONITORING AND FORECASTING

<i>Chapter 13. Some general points about volcano monitoring and forecasting</i>	<i>165</i>
<i>H. Tazieff</i>	

Geophysical approach	165
Chemical approach	169
Physical approach	170
Phenomenological approach	170
Cross-correlating, interpreting, forecasting	170

<i>Chapter 14. Volcano surveillance and prediction of eruptions in Japan</i>	<i>173</i>
<i>D. Shimozuru</i>	

State-of-the-art of volcano surveillance in Japan	173
Equipment and personnel of volcano observatories	177
National program of prediction of volcanic eruptions	182
Strategy and tactics	185
Action taken in volcanic emergencies	188
Volcanological publications	192

<i>Chapter 15. Volcanic prediction in Iceland</i>	<i>193</i>
<i>G.E. Sigvaldason</i>	

Introduction	193
The historic and tephrochronological record	196
Discussion	210
Acknowledgements	212

<i>Chapter 16. The Hawaiian Volcano Observatory</i>	215
Acknowledgements	218
<i>Chapter 17. Mitigating volcanic disasters in Indonesia</i>	219
M.T. Zen	
Introduction	219
History of previous eruptions	219
Conclusions	227
<i>Chapter 18. Recent volcanic activity and volcanological surveillance in New Zealand</i>	237
R.R. Dibble	
Introduction	237
Instrumental surveillance	244
<i>Chapter 19. Experience in predicting volcanic eruptions in the USSR</i>	257
P.I. Tokarev	
Introduction	257
Volcanic danger and protective methods against eruptions	257
Studies on prediction of volcanic danger in the USSR	258
Volcanic zoning	259
Long-term prediction of eruptions	259
Short-term prediction of eruptions	259
Conclusions	263
SECTION IV. PHYSICS AND CHEMISTRY OF THE GAS PHASE	
<i>Chapter 20. Vesiculation of dissolved gases</i>	271
H. Tazieff	
Vesiculation	272
Bubble growth	273
<i>Chapter 21. Gas release, observed facts</i>	275
H. Tazieff	
Introduction	275

XVIII

Basic magmas	275
Viscous magmas	280
Hydro-magmatic outbursts	287
Phreatic outbursts	288
Eruptive and fumarolic gases	289
Gas phase and forecasting	289
 <i>Chapter 22. Magmatic gas monitoring</i>	 293
F. Le Guern	
Introduction	293
Sampling and laboratory analysis	294
In situ analyses	303
Conclusions	309
 <i>Chapter 23. Chemical surveillance of active volcanoes in New Zealand</i>	 311
W.F. Giggenbach	
Introduction	311
White Island: volcanic activity	311
White Island: chemical investigations	313
Volcanoes in Tongariro National Park	318
 <i>Chapter 24. Intrinsic chemical variations in high-temperature volcanic gases from basic lavas</i>	 323
T.M. Gerlach	
Introduction	323
Chemical characteristics of the restored analyses	324
CO ₂ trends in the restored analyses	329
Causes of intrinsic variations in volcanic gases	333
Towards an eruption prediction and monitoring capability	336
 <i>Chapter 25. The origin of hydrogen, carbon, sulphur, nitrogen and rare gases in volcanic exhalations: evidence from isotope geochemistry</i>	 337
P. Allard	
Introduction	337
Chemical composition of volcanic gases	339
Stable isotope geochemistry	343

Isotope composition and origin of volcanic gases	346
Isotopic gas compositions and the monitoring and forecasting of volcanic behaviour	379
Conclusion	384
Acknowledgements	386

<i>Chapter 26. N_2/Ar and $^{40}Ar/^{36}Ar$ in volcanic gases of Kamchatka and the Kurile Islands</i>	<i>387</i>
<i>I.A. Menyailov, L.P. Nikitina, E.Ya. Polyvianny and V. Shapar</i>	

Sampling and analysis of gases	387
Results for discussion	387
Discussion of results	394
Acknowledgement	397

<i>Chapter 27. SO_2, HCl, and HF detection and dosing in the volcanic gas phase</i>	<i>399</i>
<i>R. Faivre-Pierret</i>	

Introduction	399
Collecting technique	399
Filter impregnation method	399
Capture efficiency	402
Preservation of samples	402
Method of SO_2 analysis	403
Method of HCl and HF analysis	404
Conclusions	408

<i>Chapter 28. Chemical sensors for monitoring volcanic activity</i>	<i>409</i>
<i>M. Gantes, J.C. Sabroux and G. Vitter</i>	

Introduction	409
Volcanic gas chemistry	410
Gas sensors	411
Conclusion	423
Acknowledgements	424

<i>Chapter 29. Use of the correlation spectrometer at volcanoes</i>	<i>425</i>
<i>R.E. Stoiber, L.L. Malinconico, Jr. and S.N. Williams</i>	

Introduction	425
Calculation and limitations of the SO_2 flux determination	427
Techniques	430

XX

Use of the SO ₂ flux data	438
Acknowledgements	444

<i>Chapter 30. Chemistry of the volcanic aerosol</i>	<i>445</i>
--	------------

R. Vié le Sage

Introduction	445
Chemical composition of volcanic aerosols	446
The measure of particle flux	455
The importance of parallel studies of chemical composition and particle size	457
Conclusions	473
Acknowledgements	474

<i>Chapter 31. Volcanic emission of radon daughters</i>	<i>475</i>
---	------------

G. Lambert

Radioactive series in the magma	475
Normal injection of radon into the atmosphere and its subsequent behaviour	476
Underground waters, and fumaroles	476
Disequilibrium in magmatic gases and possible applications	480
Conclusion	484

<i>Chapter 32. Monitoring and interpretation of activity on Mt. Merapi, Indonesia, 1977-1980: an example of practical, "civil defense", volcanology</i>	<i>485</i>
---	------------

H. Tazieff

Conclusion	492
----------------------	-----

SECTION V. NEW PHYSICAL AND GEOPHYSICAL APPROACHES

<i>Chapter 33. Geomagnetism and volcanology</i>	<i>495</i>
---	------------

F. Robach

Introduction	495
Rock magnetism	495
Thermomagnetism - case histories	499
Basic magnetic properties of rocks under mechanical stresses	500
Electrical currents	501
Instrumentation	501
Principles of measurement for volcanological purposes	503
Some aspects of reality	503

Conclusions	505
-----------------------	-----

<i>Chapter 34. Electrical and electromagnetic methods</i>	<i>507</i>
---	------------

M. Halbwachs

Introduction	507
General considerations	508
The resistivity of volcanic soils	509
Galvanic resistivity methods	511
The method of charging or "mise à la masse"	515
Self-Polarisation	517
Audio-magneto-telluric (AMT) method	520
Very low frequency (VLF) induction method	524
Conclusion	527

<i>Chapter 35. Underwater noise survey in the crater lake of Kelut Volcano (Indonesia)</i>	<i>529</i>
--	------------

C. Bercy, J.C. Sabroux and G. Suparwoto

Introduction	529
Underwater volcanic acoustics	530
Kelut Volcano	531
Ambient noise in crater lakes originating from volcanic activity	532
Experimental technique	535
Underwater noise of Kelut's crater lake	536
Conclusion	539
Acknowledgements	543

SECTION VI. CONCLUSIONS

<i>Chapter 36. Estimating eruptive peril: some case histories</i>	<i>547</i>
---	------------

H. Tazieff

Caldeira Volcano, Faial, Azores, 1958	547
Kilauea, Hawaii, 1959	549
Irazù, Costa Rica, 1964	550
Pozzuoli, Italy, 1970	551
Karthala, Comores, 1972	552
Tolbachik, Kamchatka, 1975	553
Soufrière, Guadeloupe, 1976	553
Niragongo, Zaïre, 1977	554

XXII

Ardoukôba, Djibouti, 1978	556
Mt. Etna, Italy, 1979	557

<i>Chapter 37. Facing hazards from the reawakening of dormant explosive vol-</i> <i>canoes: the examples of Mt. St. Helens, El Chichón, and</i> <i>Galunggung in 1980-1982</i>	561
P. Allard	

Introduction	561
The sequences of events at Mt. St. Helens, El Chichón and Galunggung . . .	562
Discussion	573
Conclusion	583

References	585
References Index	613
Subject Index	619
