|-------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------|-----|
| Foreword                                                                                                          | <i>Raymond A. Price</i>                                            | ix  |
| Preface                                                                                                           | <i>Claude Froidevaux and Karl Fuchs</i>                            | xi  |
| A New Era in Understanding the Continental Basement; the Impact of Seismic Reflection Profiling                   | <i>Ernest C. Hauser and Jack E. Oliver</i>                         | 1   |
| The Lower Crust of the Continents                                                                                 | <i>J. A. Percival and M. J. Berry</i>                              | 33  |
| Rheology of the Oceanic and Continental Lithosphere                                                               | <i>D. L. Turcotte</i>                                              | 61  |
| Estimation of Crustal Viscosities and Shear Stresses From an Extrapolation of Experimental Steady State Flow Data | <i>Jurgen Strehlau and Rolf Meissner</i>                           | 69  |
| Global Mapping of the Uppermantle by Surface Wave Tomography                                                      | <i>Don L. Anderson</i>                                             | 89  |
| Global Digital Seismographic Network: Research Opportunities and Recent Initiatives                               | <i>Barbara A. Romanowicz and Adam M. Dziewonski</i>                | 99  |
| Formation of Anisotropy in Upper Mantle Peridotites—A Review                                                      | <i>Adolphe Nicolas and Nikolas I. Christensen</i>                  | 111 |
| Surface Plate Kinematics and Mantle Convection                                                                    | <i>A. M. Forte and W. R. Peltier</i>                               | 125 |
| Exploring Heterogeneities of the Continental Mantle by High Resolution Seismic Experiments                        | <i>K. Fuchs, L. P. Vinnik, and C. Prodehl</i>                      | 137 |
| Upper Mantle Metasomatism: Chemical and Physical Consequences                                                     | <i>J. B. Dawson</i>                                                | 155 |
| Mantle Xenoliths and Continental Lithosphere Composition                                                          | <i>N. V. Sobolev</i>                                               | 161 |
| The Geochemistry of Magmatic Rocks and Paleodynamic Reconstructions                                               | <i>Mikhail Kuzmin, Alexandr Al'mukhamedov, and Gennady Anoshin</i> | 165 |
| The Forces Driving Plate Motions and Compression of the Crust in Fold Belts                                       | <i>E. V. Artyushkov</i>                                            | 175 |
| Dynamical Extension of the Lithosphere During Rifting: Some Numerical Model Results                               | <i>C. E. Keen</i>                                                  | 189 |
| Spherical Shell Tectonics and the Evolution of Subduction Zones                                                   | <i>Koshun Yamaoka, Yoshio Fuako, and Mineo Kumazawa</i>            | 205 |

Interim Report on Electromagnetic Lithosphere-Asthenosphere Soundings (ELAS) to Coordinating Committee No. 5 of the International Lithosphere Programme *D. Ian Gough (Editor)* 219

Structural Model of the Subcrustal Lithosphere in Central Europe *V. Babuška, J. Plomerová, and J. Šílený* 239

The European Geotraverse (EGT) Project: A Progress Report *Daniel A. Galson and Stephan Mueller* 253

Deep Seismic Sounding on Long Range Profiles in the Atlantic Ocean *S. M. Zverev and G. A. Yaroshevskaya* 273

The Geology of Ocean Floor *Kenneth J. Hsü* 291

Isostasy in the USSR I: Admittance Data *M. G. Kogan and M. K. McNutt* 301

Isostasy in the USSR II: Interpretation of Admittance Data *M. K. McNutt and M. G. Kogan* 309
