Chapter 1 Mechanics of Flood Basalt Magmatism

Peter Olson

Overview	1
Introduction	2
Continental Flood Basalts, Oceanic Plateaus, and Mantle Plumes	2
Constraints from Seismic Tomography and Geochemistry	3
Time Variations in Hotspot Activity	4
Hotspot Activity and Geomagnetic Reversal Frequency	4
Partial Melting in Thermal Plumes and Diapirs	7
The Numerical Model	8
Melting in Solitary Diapirs	10
Melting in Continuous Plumes	12
Conclusions	17
References	17

Chapter 2 Melt Migration and Related Attenuation in Equilibrated Partial Melts

Tye T. Gribb, Shanyong Zhang, and Reid F. Cooper

Overview	19
Introduction and Theoretical Foundation	20
Experimental Approach	22
Experimental Specimens: Co-Mg Olivine-“Basalt”	23
Creep Experiments and Specimen Analysis	24
Attenuation Experiments	24
Experimental Results	25
Flexural Creep Experiments	25
Microstructural Analysis	28
Attenuation Measurements	28

Discussion	28
Creep and Melt Migration	28
Attenuation and Melt Migration	32
Application of the Experimental Observations to the Earth's Mantle	34
Summary and Conclusions	35
References	35

Chapter 3 Influence of Basaltic Melt on the Creep of Polycrystalline Olivine under Hydrous Conditions

David L. Kohlstedt and Prame N. Chopra

Overview	37
Introduction	38
Experimental Procedures	38
Deformation Results	41
Microstructural Observations	42
Hot-Pressed Material	42
Deformed Material	43
Infrared Analyses	49
Discussion	49
Microstructural Characteristics	49
Rheological Behavior	50
Conclusions	52
References	52

Chapter 4 The Generation and Migration of Partial Melt beneath Oceanic Spreading Centers

David W. Sparks and E. M. Parmentier

Overview	55
Introduction	56

Melt Migration by Porous Flow	57	Appendix	135
The Forces That Drive Porous Flow	57	References	135
Decompacting Boundary Layers	58		
Effect of Buoyant Mantle Upwelling on Melt Generation and Migration	61	Chapter 7 An Observational and Theoretical Synthesis of Magma Chamber Geometry and Crustal Genesis along a Mid- ocean Ridge Spreading Center	
Three-Dimensional Buoyant Flow beneath an Offset Spreading Center	61	J. Phipps Morgan, A. Harding, J. Orcutt, G. Kent, and Y. J. Chen	
Melt Migration beneath Spreading Centers Implications for Crustal Thickness and Gravity	65		
Discussion	68	Overview	139
References	74	Introduction	140
	75	The Seismic Record: Seismic Constraints on Magma Emplacement and Crustal Accretion at a Fast-Spreading Ridge Axis	142
Chapter 5 Dike Patterns in Diapirs beneath Oceanic Ridges: The Oman Ophiolite		Northern East Pacific Rise	143
A. Nicolas, F. Boudier, and B. Ildefonse		Correlation between Seismic and Ophiolite Observations of Crustal Structure	143
Overview	77	Current Seismic Picture of an Oceanic Magma Chamber at a Fast-Spreading Ridge ...	145
Introduction	77	Other Seismic Constraints on Crustal Accretion at a Fast-Spreading Ridge ...	151
Regions of Diapirism and Sub-ridge Flow	78	Delivery of Melt from the Mantle to Supply the Magma Lens	154
Dike Typology in Relation to Diapiric Areas ..	82	Spreading Rate Dependence of the Magma Lens: Seismic and Gravity Constraints	154
Dike Patterns in the Southeastern Oman Diapirs	85	Closure on Observational Constraints on the Structure of an Axial Magma Chamber	158
Dikes in the Plastic Flow Reference Frame	89	A Theoretical Model for Crustal Genesis	158
Dikes in the Ridge Reference Frame	89	Introduction	158
Discussion	91	Magma Ascent and Emplacement	161
Conclusions	94	Hydrothermal Cooling	162
References	94	Model Formulation	164
		Numerical Determination of Accumulated Crustal Strain	165
Chapter 6 Neutral-Buoyancy Controlled Magma Transport and Storage in Mid-ocean Ridge Magma Reservoirs and Their Sheeted- Dike Complex: A Summary of Basic Relationships		Model Results	166
Michael P. Ryan		Neutral Buoyancy versus Magma Freezing as a Fundamental Limit to Magma Ascent	172
Overview	97	Geochemical Variability between Ridge Segments	173
Introduction	99	Closure	173
<i>In Situ</i> Density–Depth Relationships	99	References	175
Definitions	100		
The Magma Reservoir Environment and the Region of Neutral Buoyancy	102	Chapter 8 Deep Structure of Island Arc Magmatic Regions as Inferred from Seismic Observations	
Structure of the Ridge Magma Reservoir in Relation to the Region of Neutral Buoyancy	105	Akira Hasegawa and Dapeng Zhao	
Lithologic Associations in Ophiolite Complexes	110	Overview	179
Region of Negative Buoyancy	110	Introduction	179
Region of Neutral Buoyancy	111	Three-Dimensional Seismic Velocity Structure	180
Differentiation and Melt Density	112	P-Wave Velocity Structure beneath the Northeastern Japan Arc	182
Icelandic and Hawaiian Analogs	118	Three-Dimensional Seismic Attenuation Structure	185
Neutral-Buoyancy Control in Lateral Intrusion		Midcrustal Magma Bodies Detected by Reflected Seismic Waves	187
Dynamics: The Sheeted-Dike Complex	122	Deep Structure of Arc Volcanoes	191
Notes on Hydrothermal Interactions	131	References	193
Summary Relationships and Evolution of the Oceanic Crust	133		
Comments at Closure: A World without Neutral Buoyancy	134		

Chapter 9 Lateral Water Transport across a Dynamic Mantle Wedge: A Model for Subduction Zone Magmatism

J. Huw Davies

Overview	197
Introduction	197
Thermal Model	198
Brief Review of Previous Thermal Models	198
Outline of Thermal Model	199
Induced Flow in the Mantle Wedge	199
Frictional Heating at the Slab-Wedge Interface	200
Ablation	200
Trench Migration	201
Theoretical Background and Numerical Implementation	201
Results of Thermal Modeling	203
Implications of the Results	204
Adiabatic Upwelling	204
Phase Equilibria for Hydrous Peridotite ..	206
Basic Mechanism of Lateral Water Transport ..	207
Discussion of the Lateral Transport Mechanism ..	209
Transition from Silica-Rich Fluid to a Hydrous Melt	209
Transport of Water-Dominated Fluid	210
Estimate of the Water Flux That Enters the Mantle Wedge	212
Importance of Hydrous Minerals Other Than Amphiboles	213
How Much Amphibole Is Formed?	214
How Much Free Water Is There?	215
Chemistry of Amphiboles	215
Model Predictions	216
Presence and Location of the Volcanic Front ..	216
Uncertainties in Geometric Predictions ..	216
Major Element Composition of Primary Magmas	217
Slab Trace Element Signature	217
Other Predictions	217
Conclusions	218
References	219

Chapter 10 Buoyancy-Driven Fracture and Magma Transport through the Lithosphere: Models and Experiments

Moritz Heimpel and Peter Olson

Overview	223
Introduction	224
Magma Fracture Models	224
Experiments on Buoyancy-Driven Fracture	225
Experimental Method and Results	225
Dimensional Analysis of Results	228
A New Model for the Crack Propagation Velocity	229
Shape of Fractures with Constant Fluid Volume	230
Shape of Fractures with Constant Fluid Flux ..	231

Application to Magma Transport	234
Fracture Properties of Country Rock	234
Melt Properties	236
Implications for Magma Ascent Velocities	236
Additional Processes	238
Summary	238
References	239

Chapter 11 Accumulation of Magma in Space and Time by Crack Interaction

Akira Takada

Overview	241
Introduction	242
Crack Interactions	243
Approach to Crack Interaction	243
Summary of Gelatin Experiments	244
Interaction of Two Collinear Cracks	245
Interaction of Two Parallel Offset Cracks	248
Conditions for Crack Coalescence	251
Applications to Magma Accumulation in Space and Time	252
Magma Accumulation	252
Variation of a Volcano	253
Conclusions	255
References	255

Chapter 12 Generalized Upper Mantle Thermal Structure of the Western United States and Its Relationship to Seismic Attenuation, Heat Flow, Partial Melt, and Magma Ascent and Emplacement

Hiroki Sato and Michael P. Ryan

Overview	259
Introduction	260
Laboratory Seismic Data for Mantle Peridotite ..	261
Seismic Velocity of Mantle Peridotite	261
Seismic Anelasticity of Mantle Peridotite ..	263
Generalized Thermal Structure beneath the Western United States from Seismic Anelasticity Data ..	265
Upper Mantle Anelasticity Structure	265
Volcanic Setting	266
Upper Mantle Temperature and Partial Melt Fraction	268
Comparison with Previous Temperature Estimates	272
Surface Heat Flow in the Western United States	273
Comparison with Heat Flow Temperature-Depth Profiles	274
Generalized Thermal Structure beneath the Western United States from Seismic Velocity Data	277
General Temperature Distributions	277
Regional Temperature Distributions	277
A Remark on Melt Retention and the Effective Melt Content of a <i>Source Region</i>	278

Comparison with Heat Flow-Derived Temperatures	279
On Discontinuous Magma Ascent and the Mechanics of Basaltic Underplating	279
Inherently Discontinuous Nature of the Ascent Path	280
Penetration of the Mantle–Crust Transition Zone by a Buoyancy-Driven Crack	281
Penetration of the Mantle–Crust Transition Zone by a Constant Fluid Pressure Crack	284
Penetration of a Material Transition Zone by a Fluid-Pressurized Crack with Differential Boundary Loading	284
Closing Discussion	285
References	286

Chapter 13 Aspects of Magma Generation and Ascent in Continental Lithosphere

George W. Bergantz and Ralph Dawes

Overview	291
Introduction	291
Melt Generation	294
Modeling the Physical Interaction of Basalt and Crust	297
Rheology of Suspensions	297
Numerical Model of Basaltic Underplating	299
Melt Collection and Ascent	306
Melt Convection in a Porous Medium	306
Compaction	307
Diapirism and Diking	308
Tectonic Regimes and Magma Ascent	309
References	312

Chapter 14 Two-Component Magma Transport and the Origin of Composite Intrusions and Lava Flows

Charles R. Carrigan

Overview	319
Introduction	320

Observations of Composite Flows, Dikes, and Conduits	321
Basalt and Rhyolite Systems	321
Rhyodacite and Rhyolite Systems	323
Models of the Origin of Mafic-to-Silicic Zoning	326
Sequential Magma Transport	326
Simultaneous Transport of Different Magma Types	327
Fluid Dynamics of the Simultaneous Flow of Two Magmatic Components	330
Polymer Coextrusion Experimental Analogues	331
Numerical Models of Encapsulation and Self-Lubrication	334
Analytical Modeling of Lubricated Magma Transport	336
A Rational Model for Magma Chamber Withdrawal	346
A Physical Model for the Contemporaneous Eruption of Three Domes in the Inyo Volcanic Chain, Long Valley, California	349
Summary and Conclusions	351
References	352

Chapter 15 Fluid and Thermal Dissolution Instabilities in Magmatic Systems

J. A. Whitehead and Peter Kelemen

Overview	355
Introduction	356
Thermal Erosion	358
Transition of One-Dimensional Flows to Oscillations: An Experimental Study	358
Stability of Thermally Eroded Flows	362
Experiments with Paraffin	369
Magma Flow Instabilities from Chemical Corrosion	371
References	377
