Preface.....	III
Acknowledgements.....	IV
Summary.....	V
 I. MODERN STORM DEPOSITIONAL SYSTEMS: ACTUALISTIC MODELS.....	 1
1. General processes of storm sedimentation.....	3
2. Storm sedimentation in nearshore skeletal banks, South Florida.....	 6
2.1. Introduction.....	6
2.2. Methods.....	7
2.3. Study area and previous work.....	7
2.4. Geomorphology of Safety Valve banks.....	10
2.5. Sedimentary facies and bank stratigraphy.....	11
2.5.1. Coralgall pack- to grainstone.....	11
2.5.2. Halimeda packstone.....	11
2.5.3. Pellet-rich Halimeda-mollusc wackestone.....	12
2.5.4. Mollusc wacke- to packstone with lithoclasts... 13	13
2.5.5. Quartz sand.....	13
2.6. Evidence for storm sedimentation.....	15
2.6.1. Geomorphological evidence.....	15
2.6.2. Stratigraphic evidence.....	17
2.6.3. Biostratigraphic evidence.....	21
2.7. Dynamic stratigraphy and history of Safety Valve banks	23
2.8. Storm effects in Sandy Key (Florida Bay).....	24
2.9. Summary and conclusions.....	28
3. Storm sedimentation in offshore shelf areas, German Bay (North Sea).....	 30
3.1. Introduction.....	30
3.2. Methods.....	31
3.3. Study area and previous work.....	31
3.4. Storm stratigraphy: descriptions.....	33
3.4.1. Supra- and intertidal storm layers.....	33
3.4.2. Shoreface storm layers.....	34
3.4.3. Proximal storm layers.....	34
3.4.4. Distal storm layers.....	35
3.5. Proximality trends: results and discussion of statistical treatment.....	 36
3.5.1. Percentage of sand.....	37
3.5.2. Frequency of storm layers.....	37
3.5.3. Percentage of cross-lamination.....	40
3.5.4. Storm layer thickness.....	40
3.5.5. Allochthony in storm shell beds.....	41
3.6. Dynamic stratigraphy: storm processes.....	42
3.7. Applications.....	45
3.8. Summary and conclusions.....	48
4. Final remarks on actualistic models.....	50
 II. AN ANCIENT STORM DEPOSITIONAL SYSTEM: DYNAMIC STRATIGRAPHY OF INTRACRATONIC CARBONATES, UPPER MUSCHELKALK (MIDDLE TRIASSIC), SOUTH-GERMAN BASIN.....	 51
1. Introduction.....	53
1.1. Scope of study.....	53
1.2. Hierarchical approach to dynamic stratigraphy.....	54
1.3. General setting and stratigraphy.....	55
1.4. Previous work.....	57
1.5. Methods.....	58

VIII

2. Stratification and facies types.....	61
2.1. General.....	61
2.2. Peritidal strata.....	62
2.3. Oncolitic wacke- to packstone.....	64
2.4. Massive oolitic pack- to grainstone.....	65
2.5. Massive shelly pack- to grainstone.....	66
2.6. Massive crinoidal limestone.....	69
2.7. Skeletal channel fills	72
2.8. Nodular wackestone	74
2.9. Nodular lime mudstone	76
2.10. Graded skeletal sheets.....	78
2.11. Thin-bedded limestone/marlstone alternations.....	85
2.12. Conclusions: storm-dominated stratification.....	92
3. Facies sequences.....	97
3.1. Vertical sequences: coarsening-upward cycles.....	97
3.1.1. Oncolitic cycles.....	97
3.1.2. Oolite grainstone cycles.....	100
3.1.3. Skeletal bank cycles.....	102
3.1.4. Crinoidal bank cycles.....	102
3.1.5. Nodular-to-compact cycles.....	105
3.1.6. Thickening-upward cycles.....	107
3.1.7. Conclusions: transgressive/regressive dynamics.....	111
3.2. Lateral sequences: carbonate ramps.....	113
3.2.1. Crinoidal ramps	113
3.2.2. Shelly/oolitic ramps.....	117
3.3. Paleoecological trends.....	120
3.3.1. Ramp biofacies.....	120
3.3.2. Ramp ichnofacies.....	121
3.4. Paleocurrents.....	123
3.4.1. Wave ripples.....	123
3.4.2. Cross-bedding.....	125
3.4.3. Surge channels and imbrication.....	128
3.4.4. Gutter casts.....	128
3.5. Conclusions: carbonate ramp dynamics.....	131
4. Basin organisation.....	135
4.1. Distribution of minor cycles.....	135
4.1.1. Lower part of Upper Muschelkalk (mo1).....	135
4.1.2. Upper part of Upper Muschelkalk (mo2/3).....	138
4.1.3. Discussion	141
4.2. Hierarchy of cycles.....	144
4.3. General context.....	147
4.4. Conclusions: basin dynamics.....	150
5. Dynamic stratigraphy: concluding remarks.....	152
So what ?	155
Literature.....	159
