CHAPTER 1. ETERNAL METAPHORS OF PALAEONTOLOGY (Stephen Jay Gould)	1
The content of palaeontology	1
A taxonomic interlude	4
Pre-evolutionary establishment of the three questions	6
The altered context of evolutionary theory	12
Contemporary palaeobiology recycles the ancient issues	17
An editorial comment in conclusion	20
References	25
CHAPTER 2. GENERAL PATTERNS OF METAZOAN EVOLUTION (James W. Valentine)	27
Introduction	27
Phylogenetic models	27
The fossil record of the establishment of body plans	30
Adaptive models of metazoan body plans	34
The timing of the evolution of body plans	39
Models of evolutionary explosions	41
Phanerozoic metazoan patterns	47
Summary of major metazoan evolutionary patterns	53
Acknowledgements	55
References	55
CHAPTER 3. STOCHASTIC MODELS IN EVOLUTIONARY PALAEONTOLOGY (David M. Raup)	59
Introduction	59
Concepts of randomness	59
Path-dependent versus independent events models	61
Markov processes	62
Strategies for applying stochastic models	65
Applications	70
Summary	76
Acknowledgements	77
References	77
CHAPTER 4. BRACHIOPOD EVOLUTION (Alwyn Williams and John M. Hurst)	79
Introduction	79
Nature of numerical data	80
General aspects of brachiopod history	84
Major events in brachiopod evolution	88

Conclusions	117
References	119
 CHAPTER 5. EVOLUTION OF PRIMITIVE ECHINODERMS (C.R.C. Paul)	123
Introduction	123
Origin, characteristics and relationships of echinoderms	124
Patterns of echinoderm evolution	127
Vital functions in fossil echinoderms	131
References	156
Postscript	158
 CHAPTER 6. PATTERNS AND THEMES OF EVOLUTION AMONG BRYOZOA (Thomas J.M. Schopf)	159
General considerations	159
Patterns of evolution	167
Themes of evolution	184
Summary	200
Acknowledgements	201
References	201
 CHAPTER 7. TRENDS, RATES, AND PATTERNS OF EVOLUTION IN THE BIVALVIA (Steven M. Stanley)	209
Introduction	209
Bivalve phylogeny	209
Methods of phyletic reconstruction	213
The Cambro-Ordovician divergence	214
Trends and patterns of evolution and extinction	216
Rates of evolution and extinction	222
Biological agents in macro-evolution	235
Summary	246
References	247
 CHAPTER 8. AMMONITE EVOLUTION (W.J. Kennedy)	251
Introduction	251
Ammonite biology	251
The major features of ammonoid evolution	251
The origins of higher categories	263
Evolutionary patterns at family level	264
Evolution at the species level	270
Sutural evolution	279
Divergence, convergence and parallelism	280
Iterative evolution	284
Palingenesis and proterogenesis	284
Evolutionary size changes	288
Rates of evolution	290
Racial senility	292
Extinction	295
Summary	299
Acknowledgements	299
References	300

CHAPTER 9. TRILOBITES AND EVOLUTIONARY PATTERNS (Niles Eldredge)	305
Introduction	305
Speciation in trilobites	308
Diversity controls and faunal patterns of speciation	311
Biogeography	314
Aspects of evolutionary adaptation in trilobites	315
Phylogenetic relationships among the trilobites	320
Relationships with other arthropods	327
References	330
 CHAPTER 10. PATTERNS OF EVOLUTION IN THE GRAPTOLITES (R.B. Rickards)	 333
Introduction	333
Coloniality	334
Genetic polymorphism, inbreeding and outbreeding	335
Sequence of graptolite faunas	336
Cladogenesis and anagenesis	337
Origination and extinction	338
Origin of new types	340
Cope's Rule	352
Biogeography	353
Patterns peculiar to graptolite evolution	353
Summary	356
Acknowledgements	357
References	357
 CHAPTER 11. EVOLUTION OF TRACE FOSSIL COMMUNITIES (Adolf Seilacher)	 359
Introduction	359
The present-day model	359
Translation into the palaeontological record	360
Evolution of flysch ichnocoenoses through Phanerozoic times	361
Intertidal communities	371
General conclusions	375
Acknowledgements	376
References	376
 CHAPTER 12. THE PATTERN OF DIVERSIFICATION AMONG FISHES (Keith Stewart Thomson)	 377
Introduction	377
Overall diversity	378
Rates of origination and extinction	382
The course of adaptive radiation	385
Discussion	395
Summary of conclusions	401
Acknowledgements	402
References	402
Addendum	404

CHAPTER 13. PATTERNS OF AMPHIBIAN EVOLUTION: AN EXTENDED EXAMPLE OF THE INCOMPLETENESS OF THE FOSSIL RECORD (Robert L. Carroll)	405
Introduction	405
Labyrinthodontia	407
"Lepospondyls"	416
"Lissamphibia"	419
Fossil record	422
Discussion	427
Summary	430
Acknowledgements	431
References	431
CHAPTER 14. TETRAPOD MASS EXTINCTIONS — A MODEL OF THE REGULA- TION OF SPECIATION RATES AND IMMIGRATION BY CYCLES OF TOPOGRAPHIC DIVERSITY (R.T. Bakker)	439
Introduction	439
Measuring diversity in fossil tetrapods	440
The patterns of diversity	445
Suggested causes of mass extinctions	455
Haug Effect control of diversity	459
Summary	465
References	466
CHAPTER 15. PATTERNS OF EVOLUTION IN THE MAMMALIAN FOSSIL RECORD (Philip D. Gingerich)	469
Introduction	469
Mammalian radiations	470
Mammalian adaptations	483
Origin of species and higher taxa	490
Conclusions	497
Acknowledgements	499
References	499
CHAPTER 16. PATTERNS OF EVOLUTION IN EARLY ANGIOSPERMS (James A. Doyle)	501
Introduction	501
Systematic background	503
Evolutionary patterns in the mid-Cretaceous angiosperm record	507
Adaptive aspects of the early angiosperm record	533
Summary and conclusions	540
Acknowledgements	542
References	542
CHAPTER 17. PATTERNS OF EVOLUTION: A SUMMARY AND DISCUSSION (Thomas J.M. Schopf)	547
Introduction	547

CONTENTS	XIII
Three themes	547
Additional comments on macro-evolution	559
Summary	560
References	561
AUTHOR INDEX	563
GENERAL INDEX	581
