Acknowledgements	xi
Series foreword	xiii
Preface	xv
<b>1 Historical and legendary disasters</b>	<b>1</b>
1.1 Natural disasters of historical record	1
1.2 Legendary accounts of floods	1
1.3 A naturalistic account of the deluge from the 17th century	3
1.4 The Ussher chronology	6
<b>2 Obligatory catastrophism of the latter 17th century</b>	<b>7</b>
2.1 Constraints on theorizing based on biblical chronology	7
2.2 Steno's prodromus	7
2.3 Hooke's views on fossils, floods and earthquakes	14
<b>3 The antiquity of the Earth as perceived in Neptunist and Plutonist theories of the 18th century</b>	<b>18</b>
3.1 Neptunian theories	18
3.2 Hutton's Plutonist theory	25
3.3 Theoretical geology towards the end of the 18th century	31
<b>4 Geology's heroic age</b>	<b>33</b>
4.1 Geological isms of the early 19th century	33
4.2 The Wernerian Society	33
4.3 Playfair's <i>Illustrations</i>	34
4.4 Hall's experiments	35
4.5 Cuvier's catastrophism	36
4.6 Buckland's diluvialism	42

<b>5</b>	<b>Uniformitarians and catastrophists of the 19th century</b>	<b>45</b>
5.1	Lyellian uniformitarianism	45
5.2	The christening of uniformitarianism and catastrophism	49
5.3	Sedgwick's criticism of the uniformitarian doctrine	50
5.4	Lyell's responses to his critics	51
5.5	Agassiz and the demise of diluvialism	53
5.6	Lyell's influence on Darwin	56
5.7	The Kelvin disturbance	58
5.8	Discovery of radioactivity	60
<b>6</b>	<b>Meteorite craters</b>	<b>62</b>
6.1	Impact and explosion craters	62
6.2	The Meteor Crater of Arizona	63
6.3	Other solitary explosion craters	69
6.4	Impact craters	70
6.5	Mixed clusters of impact and explosion craters	72
6.6	The Tungushka meteor	76
6.7	The rarity of meteorite craters	78
<b>7</b>	<b>Cryptoexplosion structures</b>	<b>80</b>
7.1	General features	80
7.2	Controversy concerning origin	80
7.3	A sampler of cryptoexplosion structures	83
7.4	Effects of explosive impacts on organisms	92
<b>8</b>	<b>Mass extinctions</b>	<b>94</b>
8.1	Major episodes	94
8.2	The search for periodicities	99
8.3	Selectivity in extinction events	106
<b>9</b>	<b>Catastrophist scenarios for mass extinctions</b>	<b>108</b>
9.1	The Alvarez hypothesis for terminal Cretaceous extinctions	108
9.2	Evidence supportive of the Alvarez hypothesis	110
9.3	Consequences of impact and explosion of extraterrestrial bodies	113
9.4	Radiation as a cause of mass extinctions	120
9.5	'Bad water' hypotheses	124

<b>10</b>	<b>Extinction of the dinosaurs</b>	<b>129</b>
10.1	Dinosaurmania	129
10.2	Discovery and naming	131
10.3	Points of general agreement concerning dinosaurs	131
10.4	Some hypotheses for extinction	132
10.5	Endotherms or ectotherms?	135
10.6	Bang or whimper?	137
<b>11</b>	<b>Reactions to catastrophist hypotheses for mass extinctions</b>	<b>141</b>
11.1	Hypotheses invoking impacts of extraterrestrial bodies	141
11.2	Hypotheses invoking radiation	142
11.3	Problems with iridium and other platinum-group metals	143
11.4	Evidence provided by microspherules	147
11.5	Arctic-spill hypothesis	148
<b>12</b>	<b>Alternative hypotheses for mass extinctions</b>	<b>150</b>
12.1	Related to volcanism	150
12.2	Related to changes in global temperature	156
12.3	Related to changes in sea-level	158
12.4	Related to history of plant life	162
<b>13</b>	<b>The new catastrophism</b>	<b>166</b>
13.1	Revival of uniformitarianism in the 20th century	166
13.2	A change in perspective	166
13.3	The impactors	167
13.4	Impact as a fundamental process in planetary evolution	170
13.5	Cosmic impacts and explosions	170
13.6	Giant impact theory of lunar origin	172
13.7	Catastrophic causes of mass extinctions	173
13.8	Status of neocatastrophism	175
13.9	A revolution in the Earth and planetary sciences?	177
13.10	Progress of the extinction debate	179
13.11	A farewell to isms	180
