*preface*      vii

<b>1</b>	<b>Introduction to a System Concept in Groundwater Hydrology</b>	<b>1</b>
1.1	Notion of a System	2
1.2	Systems and Modeling Concepts	4
1.3	Hydrologic and Water-resource Systems	9
1.4	Major Subsystems and Their Investigation	22
1.5	Organization and Scope of the Book	30

## **part one   The Groundwater Basin as a Lumped Parameter System      39**

<b>2</b>	<b>Hydrologic Models</b>	<b>41</b>
2.1	Conventional Input-Output Analysis	42
2.2	Basin Assemblages and Regression Analysis	53
2.3	Information Theory and Hydrologic Variables	57
2.4	Concluding Statement	72
<b>3</b>	<b>Optimization Models</b>	<b>78</b>
3.1	Overview of Objectives and Concepts in Groundwater Management	79
3.2	Basic Economic and Hydrologic Concepts	91
3.3	Strategies for Isolated Groundwater Basins	93
3.4	Related Problems in Valuation	107
3.5	Mathematical Programming	113
3.6	Concluding Statement	135

## **part two   Conservation Principles and Applications      143**

<b>4</b>	<b>Energy and Its Transformations</b>	<b>145</b>
4.1	Mechanical Energy and Fluid Flow	146
4.2	Measurements of Potential Energy and Interpretations	164
4.3	Other Forms of Energy	176
4.4	Extensions for Two Miscible Fluids: Sea-Water Intrusion in Coastal Aquifers	183
4.5	Energy Concepts Applied to Chemical Thermodynamics	191
4.6	Concluding Statement	202

5	Compressibility, Elasticity, and Main Equations of Flow	209
5.1	Effective Stress and Natural Body Forces	210
5.2	Storativity of Elastic Aquifers	216
5.3	Elastic Compression and Water-level Fluctuations	223
5.4	Extensions for Low-permeability Units	228
5.5	Effective Stress and Resistance to Shear	235
5.6	Main Equations of Flow	239
5.7	Concluding Statement	246
 <b>part three The Groundwater Basin as a Distributed-Parameter System 251</b>		
6	Regional Groundwater Flow: Theoretical Models of the Steady-state and Related-field Observations	253
6.1	Theoretical Models: Solutions of Laplace's Equation	254
6.2	Surface Features of Groundwater Flow	273
6.3	Temperature of Groundwater	279
6.4	Chemistry of Groundwater	283
6.5	Extensions for Environmental, Engineering, and Geological Applications	296
6.6	Concluding Statement	309
7	Theoretical Models of the Unsteady State: Well Flow, Consolidation Theory, Simulation	315
A.	Well Flow	316
7.1	The Heat-flow Analogy: Radial Flow to a Well in an Infinite Aquifer	317
7.2	The Steady Response	327
7.3	Extensions and Modifications of the Nonequilibrium Equation	332
7.4	A More General Theory of Radial Flow	338
7.5	Radial Flow to a Well in a Finite Aquifer	347
7.6	Water-level Response at the Pumped Well	351
B.	Consolidation Theory	356
7.7	Theoretical Development for One-dimensional Consolidation	356
7.8	Mathematical Analysis	360
C.	Simulation	367
7.9	Analog Simulation	368
7.10	Digital Simulation	381
7.11	Simulation and Objectives Functions	385
