

## CONTENTS

FOREWORD . . . . .	vii
PREFACE. . . . .	ix
 CHAPTER 1. THE NATURE AND CLASSIFICATION OF CLAYS AND SOILS. . . . .	1
Geological classification. . . . .	1
Engineering classification . . . . .	5
Ceramic classification . . . . .	14
Pedological classification . . . . .	15
References . . . . .	18
 CHAPTER 2. PHYSICAL GEOLOGY. . . . .	21
Geomorphology. . . . .	22
Hydrological cycle . . . . .	25
Erosion and transportation . . . . .	29
Mass movements. . . . .	30
Mass transport processes. . . . .	36
(a) Erosion and transportation in channels. . . . .	36
(b) Erosion and transportation by wind. . . . .	39
(c) Erosion and transportation by ice . . . . .	40
References . . . . .	42
 CHAPTER 3. THE ORIGIN AND EVOLUTION OF CLAY MINERALS AND CLAYS . . . .	49
Parent materials of clays and soils. . . . .	49
Formation of clay minerals . . . . .	52
Physical processes. . . . .	53
Chemical processes. . . . .	54
Chemical processes at normal temperatures . . . . .	56
Chemical processes at elevated temperatures . . . . .	63
Clay minerals in the sedimentary cycle . . . . .	65
Post-depositional changes in clays . . . . .	68
Principles of consolidation theory . . . . .	69
Other physical changes . . . . .	74
Mineralogical changes. . . . .	77
Changes in composition and content of pore solutions . . . . .	78
References . . . . .	80

CHAPTER 4. COMPOSITION AND FABRIC OF CLAYS . . . . .	91
The composition. . . . .	92
Crystallography. . . . .	92
Bonding and structure. . . . .	93
Crystal chemistry of silicates . . . . .	98
Phyllosilicates. . . . .	100
The kaolinite-serpentine group. . . . .	105
The pyrophyllite-talc group . . . . .	106
The smectite group. . . . .	107
The vermiculite group . . . . .	108
The mica group. . . . .	109
The brittle mica group. . . . .	111
The chlorite group. . . . .	112
Interstratified clay minerals . . . . .	112
Non-crystalline solids . . . . .	113
Fabric of clay soils . . . . .	114
References . . . . .	134
 CHAPTER 5. PHYSICAL CHEMISTRY OF CLAYS . . . . .	 143
Properties of colloidal particles. . . . .	143
Colloidal solutions. . . . .	145
Exchange reactions . . . . .	153
Cation exchange . . . . .	154
Anion exchange. . . . .	158
Exchange involving organic materials. . . . .	159
References . . . . .	161
 CHAPTER 6. MOISTURE INTERACTION WITH CLAYS AND CLAY MINERALS . . . . .	 167
The nature of water and ionic solutions. . . . .	168
The retention of moisture. . . . .	171
The migration of moisture. . . . .	177
Volume changes due to moisture migration . . . . .	181
Volume increase . . . . .	181
Volume decrease . . . . .	191
Frost action . . . . .	201
References . . . . .	209
 CHAPTER 7. STRENGTH AND RHEOLOGY OF CLAYS. . . . .	 219
Stress and strain. . . . .	219
Elasticity, plasticity and viscosity . . . . .	223

Elasticity. . . . .	223
Plasticity. . . . .	224
Viscosity . . . . .	225
Systems with variable viscosity and yield point . . . . .	226
Rheological behaviour and models . . . . .	227
Shear strength and the Mohr-Coulomb hypothesis . . . . .	231
Discussion. . . . .	234
References. . . . .	244
 CHAPTER 8. SOIL STABILIZATION . . . . .	 251
Mechanical stabilization. . . . .	251
Stabilization with additives. . . . .	254
Stabilization with bituminous materials, resinous materials and chemicals . . . . .	257
Stabilization with cement. . . . .	261
Stabilization with lime. . . . .	267
Stabilization with phosphates and other compounds. . . . .	273
Stabilization by electrokinetics . . . . .	274
Modification of frost heaving in soils. . . . .	274
References. . . . .	276
 CHAPTER 9. CLAYS AS MATERIALS . . . . .	 285
Winning and pre-treatment of clay . . . . .	288
Raw materials . . . . .	290
Clay products . . . . .	297
Changes on firing clays . . . . .	304
Strength of materials made from clay. . . . .	308
Durability. . . . .	310
References. . . . .	314
 CHAPTER 10. THE MINERALOGICAL ANALYSIS OF CLAY. . . . .	 323
Analysis by X-ray diffraction . . . . .	323
Disaggregation and removal of cementitious material . . . . .	329
Mounting and treatment of samples for X-ray analysis. . . . .	332
Quantitative analysis . . . . .	339
Thermal methods of analysis . . . . .	341
Infrared analysis . . . . .	346
Chemical analysis . . . . .	348
References. . . . .	352

CHAPTER 11. PHYSICAL ANALYSIS OF CLAYS . . . . .	361
Analysis of arrangement and orientation in clays . . . . .	361
The petrographic microscope . . . . .	363
The electron microscope . . . . .	364
X-ray diffraction . . . . .	372
Analysis of shape of minerals. . . . .	374
Particle-size analysis . . . . .	379
Surface area . . . . .	387
Porosity . . . . .	390
Determination of density and specific gravity. . . . .	391
References . . . . .	393
 CHAPTER 12. ENGINEERING ANALYSIS OF SOILS. . . . .	 401
Measurement of soil moisture and moisture movement . . . . .	402
Measurement of moisture content . . . . .	402
Measurement of permeability and suction . . . . .	403
Index tests. . . . .	406
Determination of shear strength. . . . .	410
Direct shear test . . . . .	413
Triaxial test . . . . .	415
Unconfined compression test . . . . .	419
Torsion tests . . . . .	419
The vane shear test . . . . .	420
Consolidation. . . . .	421
Compaction . . . . .	428
References . . . . .	430
 INDEX TO AUTHORS CITED IN TEXT . . . . .	 437
 SUBJECT INDEX. . . . .	 451
