Preface	vii	Predicting discharge and sediment flux of the Po River, Italy since the Last Glacial Maximum	171
Numerical simulation of the syn- to post-depositional history of a prograding carbonate platform: the Rosengarten, Middle Triassic, Dolomites, Italy <i>Axel Emmerich, Robert Tscherny, Thilo Bechstädt, Carsten Bükér, Ullrich A. Glasmacher, Ralf Littke and Rainer Zühlke</i>	1	Impact of discharge, sediment flux and sea-level change on stratigraphic architecture of river–delta–shelf systems	191
Fine-scale forward modelling of a Devonian patch reef, Canning Basin, Western Australia <i>Claude-Alain Hasler, Erwin W. Adams, Rachel A. Wood and Tony Dickson</i>	37	Grain-size sorting of river–shelf–slope sediments during glacial–interglacial cycles: modelling grain-size distribution and interconnectedness of coarse-grained bodies	207
Structural, reverse-basin and forward stratigraphic modelling of the Southern Cantabrian Basin, northwest Spain <i>Zbynek Veselovský, Thilo Bechstädt and Rainer Zühlke</i>	65	Modelling the preservation of sedimentary deposits on passive continental margins during glacial–interglacial cycles	223
Numerical modelling of alluvial deposits: recent developments <i>John Bridge</i>	97	Modelling source-rock distribution and quality variations: the organic facies modelling approach	239
Process-based stochastic modelling: meandering channelized reservoirs <i>Simon Lopez, Isabelle Cojan, Jacques Rivoirard and Alain Galli</i>	139	Spatial data templates: combining simple models of physical processes with stochastic noise to yield stable, archetypal landforms	275
Simulation of tidal flow and circulation patterns in the Early Miocene (Upper Marine Molasse) of the Alpine foreland basin <i>Ulrich Bieg, Michael Peter Süß and Joachim Kuhlemann</i>	145	Models that talk back	287
