Prefac	e e	vii
Chapt	er 1: Continuum versus Discrete Models	1
1.0	Introduction	1
1.1	A hierarchy of heterogeneities and length scales	2
1.2	Long-range correlations, fractals and percolation	3
1.3	Continuum versus discrete models	5
1.4	Summary	7
Chapt	er 2: The Equations of Change	8
2.0	Introduction	8
2.1	The equation of continuity	8
2.2	The momentum equation	9
2.3	The diffusion and convective-diffusion equations	10
Chapt	er 3: Fractal Concepts and Percolation Theory	12
3.0	Introduction	12
3.1	Box-counting method and self-similar fractals	13
3.2	Self-affine fractals	16
3.3	Multifractal systems	16
3.4	Fractional Brownian motion and long-range correlations	18
3.5	Percolation processes	21
	3.5.1 Bond and site percolation	22
	3.5.2 Computer simulation of percolation on a network	24
	3.5.3 Characterization of a percolation system	25
	3.5.4 Scaling theory of percolation processes	27
	3.5.5 Formation of fractal structures in percolation systems	29
	3.5.6 Percolation in finite systems and finite-size scaling	30
	3.5.7 Percolation in random networks and in continua	31
3.6	A glance at history	33
3.7	Conclusions	35

Contents X

Chapte	er 4: Diagenetic Processes and Formation of Rock	36
4.0	Introduction	36
4.1	Diagenetic and metasomatic processes	36
4.2	Continuum models of diagenetic processes	38
4.3	Geometrical models of diagenetic processes in granular rock	45
4.4	A geometrical model of carbonate rock	47
4.5	Diagenetic processes of fractured rock	49
4.6	Conclusions	50
Chapte	er 5: Morphology of Porous Media and Fractured Rock	52
5.0	Introduction	52
5.1	Porosity, specific surface area and tortuosity	52
5.2	Fluid saturation, capillary pressure, and contact angle	53
5.3	Pore size distribution	56
	5.3.1 Mercury porosimetry, network simulation and percolation	57
	5.3.2 Sorption isotherms and percolation	73
	5.3.3 Small-angle scattering	77
	5.3.4 Nuclear magnetic resonance	79
5.4	Topological properties of porous media	82
5.5	Fractal properties of porous media	
	5.5.1 Adsorption methods	
	5.5.2 Chord-length measurements	
	5.5.3 Correlation function method	
	5.5.4 Small-angle scattering methods	
	5.5.5 Spectral method	
5.6	Porosity and pore size distribution of fractal porous media	
5.7	Morphology of fractured rocks	
5.8	Conclusions	
Chapt	er 6: Models of Porous Media	112
6.0	Introduction	112
6.1	Models of macroscopic porous media	112
	6.1.1 One-dimensional models	113
	6.1.2 Spatially-periodic models	113
	6.1.3 Bethe lattice models	
	6.1.4 Network models	
	6.1.5 Continuum models	120
6.2	Models of pore surface roughness	
6.3	Models of megascopic porous media	
	6.3.1 Random hydraulic conductivity models	
	6.3.2 Fractal models	
	6.3.3 Multifractal models	
6.4	Interpolation schemes and conditional simulation	
6.5	Conclusions
