**Part I Natural Geochemical Cycles and the Disposal of
 Anthropogenic Wastes**

1	Subject	3
2	Causal relationships	4
3	What can be done?	5
4	The present waste situation	6
4.1	Radioactive wastes	6
4.2	Nonradioactive wastes	6
5	Long-term impact of nonradioactive and radioactive wastes	12
6	Rates of migration and geochemical cycles on the earth	15
7	Possibilities for the construction of underground repositories	19
8	Technologies for the mining of storage space in the underground	22
9	Host rocks for underground repository sites	30
10	Underground repositories in Germany	35
11	Limitations of underground repositories	48
12	Assessment of the present situation	52

Part II Fluids in Marine Evaporites

13	Salt solutions and fluid inclusions in marine evaporites	55
13.1	Scientific fundamentals	55
13.2	Research concept	58
14	Gases in marine evaporites	62
14.1	Fundamentals	62
14.2	Gas occurrences in marine evaporites	63
14.3	Inclusion of the gases	65
14.4	Composition of the gases	66
14.5	Gas volumes	72
14.6	Gas pressures	74
14.7	Formation and origin of the gases	75
14.7.1	Fundamentals	75
14.7.2	Hydrocarbons	77
14.7.3	Carbon dioxide	80

14.7.4	Hydrogen	80
14.7.5	Nitrogen	82
14.7.6	Hydrogen sulfides	83
14.7.7	Noble gases	84
14.7.8	Other components	84
14.8	What is the origin of the gases in evaporites?	84
14.9	Release of gases during mining operations	89
14.10	Gas and isolated petroleum occurrences in the Zechstein evaporites of northern Germany	90
14.11	Gases in the Gorleben salt dome	97
14.12	Adverse effects of salt-bound gases and radiolysis on the long-term safety of underground repositories	102
14.13	Detection of gases and condensates in evaporites	105
14.14	Research concept	107

Part III The Composition of Salt Domes as a Criterion for Evaluating the Long-Term Safety of Underground Repositories for Anthropogenic Wastes

15	Geological principle	113
16	The example of evaporites	115
17	Composition of Zechstein evaporites in the Hannover region, northern Germany	132
17.1	Evaporite rocks	132
17.2	Fracture fillings	137
17.3	Solutions	139
17.4	Gases	146
18	Calculation of mineral reactions and material transports	148
18.1	Fundamentals for data processing	148
18.2	Salt Rocks	152
18.2.1	Formation of kainitite from carnallite	152
18.2.2	Formation of K-Mg-free rocks from kainitite	155
18.2.3	Quantification of the reactions carnallite $\rightarrow$ kainitite $\rightarrow$ K-Mg-free rock ..	157
18.3	Fracture-filling minerals	164
18.3.1	Crystallization of fracture-filling minerals	164
18.3.2	Quantification of halite crystallisation in cracks and fissures	165
19	Evaluation of the current situation	173
20	References	175
21	Subject index	191
