1 Mössbauer (Nuclear Gamma-Resonance) Spectroscopy

1.1	Basic Principles and Experimental Arrangement	1
1.1.1	Isomer Nuclear Transitions and Gamma-Ray Emission	1
1.1.2	Resonance Fluorescence	1
1.1.3	Mössbauer Effect: a Recoilless Gamma-Fluorescence	3
1.1.4	Experimental Arrangement for Observing the Nuclear Gamma-Resonance (Mössbauer Spectrometer)	4
1.1.5	Development of the Method	5
1.2	Mössbauers Nuclei	6
1.3	The Mössbauer Spectra Parameters	7
1.3.1	Isomer (Chemical) Shift	7
1.3.2	Quadrupole Splitting	12
1.3.3	Magnetic Hyperfine Structure	16
1.4	The Mössbauer Spectra of Minerals	19
1.4.1	Distribution of Fe^{2+} and Fe^{3+} in Rock-Forming Silicates	20
1.4.2	The Spectra of Sulfide Minerals	28
1.4.3	Spectra of Ferric Oxides and Hydroxides	32
1.4.4	Spectra of Iron in Different Classes of Minerals, in Meteorites, Tektites, and Lunar Samples	35

2 X-Ray and X-Ray Electron Spectroscopy

2.1	Basic Concepts	38
2.1.1	Development Stages	38
2.1.2	Systematics of X-Ray and X-Ray Electron Spectroscopy Types	39
2.1.3	X-Ray Emission Spectra	44
2.1.4	X-Ray Absorption Spectra. The Quantum Yield Spectra. Reflection Spectra. Isochromatic Spectra	50
2.1.5	X-Ray Electron Spectroscopy (Electron Spectroscopy for Chemical Analysis). Auger-Spectroscopy	56
2.2	Application of X-Ray and X-Ray Electron Spectroscopy to Study of Chemical Bonding in Minerals	59
2.2.1	Determination of Molecular Orbital and Energy Band Schemes from X-Ray and X-Ray Electron Spectra	60
2.2.2	Chemical Shifts in the X-Ray and X-Ray Electron Spectra and Determination of Effective Charges	72

3 Electron Paramagnetic Resonance

3.1	The Substance of the Electron Paramagnetic Resonance (EPR) Phenomenon	76
3.1.1	The Scheme of Obtaining EPR Spectra	76
3.1.2	The Energy Levels Scheme	82
3.1.3	Substances Which Can Be Investigated by Using EPR	85
3.1.4	EPR, Lasers, and Masers	87
3.2	Physical Meaning of the EPR Spectra Parameters	88
3.2.1	The Order of Measurements; Experimental and Calculated Parameters	88
3.2.2	g-Factor and Splitting of the Spin Levels in a Magnetic Field	91
3.2.3	Fine Structure of the EPR Spectra; Fine Structure B_n (or D, E) Parameters; Initial Splitting	94
3.2.4	Parameters of Hyperfine Structure. Interaction with Magnetic Nuclei of Paramagnetic Ions	104
3.2.5	Spin-Hamiltonian; Order of Calculation the Paramagnetic Ions Spectra	111
3.3	Investigation of Minerals by EPR Spectra	114
3.3.1	Principal Applications of EPR Spectroscopy in Mineralogy and Geochemistry	114
3.3.2	Survey of EPR Data for Paramagnetic Impurity Ions in Minerals	115

4 Nuclear Magnetic Resonance (NMR) and Nuclear Quadrupole Resonance (NQR)

4.1	The Principle of the Phenomenon and Types of Interaction in NMR	119
4.1.1	Types of Nuclei Viewed from the Standpoint of NMR	122
4.1.2	Two Types of NMR-Investigations	123
4.1.3	Principal Mechanisms of Interactions in NMR	124
4.1.4	Spectra of Nuclei with $I = 1/2$ (H ¹ , F ¹⁹) in Solids	126
4.1.5	Spectra of Nuclei with $I \geq 1$ in Solids	128
4.1.6	High-Resolution NMR-Spectroscopy in Solids	130
4.2	Nuclear Magnetic Resonance in Minerals	130
4.2.1	Types and Behavior of Water in Minerals; Structural Position of Protons	130
4.2.2	Structural Applications of NMR	134
4.2.3	Experimental Estimations of the Crystal Field Gradient	135
4.3	Nuclear Quadrupole Resonance	136
4.3.1	The Energy Levels Diagram and the Resonance Condition in NQR	136
4.3.2	Quadrupole Nuclei and Requirements on the Study Substance	138
4.3.3	NQR Spectra Parameters	139
4.3.4	Minerals Investigated and Data Obtained	140

5 Luminescence

5.1 Major Steps in the Development and the Present-Day State	141
5.1.1 Applications of Luminescence in Mineralogy	141
5.1.2 Major Steps in the History of Luminescence	143
5.2 General Concepts, Elementary Processes, Parameters	146
5.2.1 Theoretical Bases Necessary for Understanding the Processes of Luminescence	147
5.2.2 Absorption, Luminescence, Excitation Spectra: the Scheme of the Experiment and Energy Levels	148
5.2.3 Energy Level Patterns and Configuration Curves Diagrams .	151
5.2.4 Kinetics of Ion Luminescence in a Crystal; Fluorescence and Phosphorescence	153
5.2.5 Transfer of Energy in Luminescence: Sensitization and Quenching	160
5.2.6 Representation of Luminescence in the Band Scheme and the Luminescence of Crystallophosphors	176
5.2.7 Methods of Luminescence Excitation	188
5.3 Types of Luminescent Systems in Minerals	194
5.3.1 Transition Metal Ions; the Crystal Field Theory and Luminescence Spectra	194
5.3.2 Rare Earths; Absorption and Luminescence Spectra	196
5.3.3 Actinides; Absorption and Luminescence Spectra	211
5.3.4 Mercury-Like Ions; Pb^{2+} in Feldspars and Calcites	215
5.3.5 Molecular Ions S_2^- , O_2^- , and F-Centers	216
5.3.6 Crystallophosphors of the ZnS Type; Natural Sphalerites and Other Sulphides	217
5.3.7 Luminescence of Diamond	220

6 Thermoluminescence

6.1 Mechanism and Parameters of Thermoluminescence	224
6.1.1 The Nature of Emission Centers	224
6.1.2 The Nature of Trapping Centers	225
6.1.3 Determination of the Thermoluminescence Parameters .	228
6.2 Experimental Data, Their Interpretation and Application in Geology	230
6.2.1 Alkali Halide Crystals	231
6.2.2 Fluorite	232
6.2.3 Anhydrite	235
6.2.4 Quartz	236
6.2.5 Feldspars	237
6.2.6 Calcite and Dolomite	238
6.2.7 Zircon	238
6.2.8 Geological Applications	238
6.2.9 Crystallochemical Factors	239
6.2.10 Physicochemical Factors	239
6.2.11 Geological and Geochemical Factors	239
6.2.12 Geological Age Dependences	240

7	Radiation Electron-Hole Centers (Free Radicals) in Minerals	
7.1	Basic Principles and Methods	242
7.1.1	Discovery of Free Radicals in Minerals and Their Wide Distribution	242
7.1.2	Defects and Centers	244
7.1.3	Free Radicals in Crystals	246
7.1.4	Molecular Orbital Schemes and EPR Parameters	247
7.1.5	The Way to Identify the Electron-Hole Centers from the EPR Spectra	251
7.1.6	Systematics of the Electron-Hole Centers in Minerals and Inorganic Compounds	254
7.2	Description of the Centers	256
7.2.1	Oxygen Centers: O^- , O_2^- , O_2^{3-} , O_3^-	257
7.2.2	Carbonate Centers: CO_3^{3-} , CO_3^- , CO_2^-	262
7.2.3	Sulfate and Sulfide Centers: SO_4^- , SO_3^- , SO_2^- , S_2^- , S_3^-	263
7.2.4	Silicate Centers: SiO_4^{5-} , SiO_4^{3-} , SiO_3^- , SiO_2^-	264
7.2.5	Phosphate Centers: PO_4^{4-} , PO_4^{2-} , PO_3^{2-} , PO_2^{2-} , PO_2^0	265
7.2.6	Impurity Cation Centers	265
7.2.7	Hole Center S^-	266
7.2.8	Atomic Hydrogen in Crystals	267
7.3	Models of Centers in Minerals	268
7.3.1	Prevalence and Significance of Centers in Minerals	268
7.3.2	Features Specific to the Structural Type and Models of the Centers in Minerals	269
7.3.3	Quartz	270
7.3.4	Feldspars	278
7.3.5	Framework Aluminosilicates with Additional Anions: Scapolite, Cancrinite, Sodalite, Ussingite Groups	279
7.3.6	Zeolites	283
7.3.7	Zircon	283
7.3.8	Beryl, Topaz, Phenakite, Euclase, Kyanite, Danburite, Datolite	283
7.3.9	Calcite	284
7.3.10	Anhydrite	284
7.3.11	Barite and Celestine	284
7.3.12	Apatite	286
7.3.13	Sheelite	286
7.3.14	Fluorite	287
7.4	Electron-Hole Centers in Alkali Halide Crystals	289
7.4.1	F Center	289
7.4.2	F Center in Compounds of Other Types	294
7.4.3	F Aggregate Centers	298
7.4.4	V Centers and Molecule Ions Hal_2^- , Hal_2^{3-}	301
