
Contents

1 Crystals and crystal structures	1
1.1 The nature of the crystalline state	1
1.2 Constructing crystals from close-packed hexagonal layers of atoms	4
1.3 Unit cells of the hcp and ccp structures	6
1.4 Constructing crystals from square layers of atoms	7
1.5 Constructing body-centred cubic crystals	8
1.6 Interstitial structures	11
1.7 Some simple ionic and covalent structures	16
1.8 Representing crystals in projection: crystal plans	18
Exercises	20
2 Two-dimensional patterns, lattices and symmetry	21
2.1 Approaches to the study of crystal structures	21
2.2 Two-dimensional patterns and lattices	22
2.3 Two-dimensional symmetry elements	24
2.4 The five plane lattices	25
Exercises	31
3 Bravais lattices and crystal systems	33
3.1 Introduction	33
3.2 The fourteen space (Bravais) lattices	33
3.3 The symmetry of the fourteen Bravais lattices: crystal systems	37
Exercises	40
4 Crystal symmetry, point groups and crystal structures: the external symmetry of crystals	41
4.1 Symmetry and crystal habit	41
4.2 The thirty-two crystal classes	42
4.3 Centres and inversion axes of symmetry	43
4.4 Crystal symmetry and properties	47
4.5 Translational symmetry elements	48
4.6 Space groups	49
4.7 Bravais lattices, motifs and crystal structures	52
Exercises	52
5 Describing lattice planes and directions in crystals: Miller indices and zone axis symbols	54
5.1 Introduction	54
5.2 Indexing lattice directions—zone axis symbols	55

5.3 Indexing lattice planes—Miller indices	56
5.4 Miller indices and zone axis symbols in cubic crystals	59
5.5 Lattice plane spacings, Miller indices and Laue indices	60
5.6 Zones, zone axes and the zone law, the addition rule	63
5.7 Indexing in the trigonal and hexagonal systems: Weber symbols and Miller–Bravais indices	64
5.8 Transforming Miller indices and zone axis symbols	66
Exercises	69
6 The reciprocal lattice	70
6.1 Introduction	70
6.2 Reciprocal lattice vectors	71
6.3 Reciprocal lattice unit cells	72
6.4 Some geometrical relationships	74
6.5 Reciprocal lattice cells for cubic crystals	76
Exercises	78
Appendix 1: Useful components for a crystallography model- building kit and suppliers	79
Appendix 2: Computer programs in basic crystallography	81
Appendix 3: Biographical notes on crystallographers mentioned in the text	82
Appendix 4: Some useful geometrical relationships	90
Answers to exercises	94
Further reading	96
Index	99
