METHODS			•									21
Choice of method												21
pH of solution, 22	- (Dxi	dat	ion	a	nd	rec	luc	tio	n (of	
solutions, 23 – Presen	ice	of i	nte	rfe	rin	g el	em	en	ts,	24		
Period of reaction, 26) —	Sta	bili	ity	of	cor	npl	exe	es,	27		
Reagents, 27 – Photo	-ser	isiti	ve	cor	mp	lex	es,	28	′	Гer	n-	
perature, 28												

CHAPTER 5. COMMON OPERATIONS IN SILICATE ANALYSIS	29
Decomposition by fluxes	29
Sodium carbonate fusion, 30 – Potassium bisulphate	
fusion, $31 - Sodium$ peroxide fusion, $32 - Fusion$ of	
sulphide-containing minerals, 34	
Decomposition by acids	35
Acid-resistant minerals and insoluble residues, 37	
Precipation	38
Co-precipitation	38
Post-precipitation	40
Peptisation	40
Filtration	41
Washing of precipitates	42
Drying and ignition of precipitates	44
Directions, 45	
	47
CHAPTER 6. CHEMICAL ANALYSIS OF SILICATE ROCKS	47
The constituents occurring in rocks	4/
The general procedure (The separation of the six groups	40
of elements)	49
Acid group, 49 – Hydrogen sulphide group, 50 –	
Ammonium hydroxide group, 51 – Ammonium sul-	
phide group, 52 – Ammonium oxalate group, 52 –	
Ammonium phosphate group, 54 – Alkali group, 55	
	57
Constant amore a constant amore and a constant amore a co	57
Crushing 59 Crinding (2)	57
Clushing, 58 – Glinding, 62	63
	66
Silicoteo with out metal (6 Silicoteo with metal (6	00
Suicates without metal, 60 – Silicates with metal, 60	
- Carbonaceous chondrites, 68 - Suicate phase of	
stony nons, oo – metai phase of stony irons and iron	
Increating applyitical results to the "day hasis"	60
Confecting analytical results to the "dry basis"	09

CONTENTS

CHAPTER 8. SILICON	71
Consideration of methods	71
Gravimetric determination of silicon in silicate rocks and	
minerals in absence of appreciable chlorine, fluorine or	
sulphur	75
Spectrophotometric determination of silicon	78
Determination of residual silicon in filtrate (12), 78	
- Determination of silicon in a suite of rocks of simi-	
lar composition, 81	
Volumetric determination of silicon	93
Rapid gravimetric determination of silicon in highly	
siliceous materials	93
CHARTER & TOTAL IRON	05
Charles 9. IOTAL IRON	95
Consideration of methods	93
Determination of Total iron in cilicate rocks and	97
minerals	98
Volumetric determination	100
Total iron by the Sulphide-permanganate method	
without regard to vanadium, 100	
Spectrophotometric determination	105
Total iron as Fe_2O_2 by the 2.2'-dipyridyl method	100
105	
Other methods	109
Gravimetric determination of Total iron after	/
separation by ion-exchange method, 109	
CHAPTED 10 TELANDING	112
Consideration of methods	113
Supervision of methods	113
Titopium by the hydrogen percende method 115	115
Titanium by the tiran method, 110 Titanium by	
the EDTA tiron method 122	
Other methods	125
	125

IX

CHAPTER 11. ALUMINIUM	126
Consideration of methods	126
Determination of alumina in silicate rocks	128
Alumina "difference", 128	
Volumetric determination	129
Alumina by the EDTA-method, 129	
Spectrophotometric determination	131
Alumina by the 8-hydroxyquinoline method, 131	
CHAPTER 12. CALCIUM	136
Consideration of methods	136
Determination of calcium oxide in silicate rocks in	
absence of excessive amounts of magnesium and phos-	
phorus	139
After precipitation as oxalate, 139	
Gravimetric method: (1) weighing as oxide, $142 - (2)$ weighing as sulphate, $144 - Volumetric method$: (1) oxidimetric by the permanganate method, $144 - (2)$ complexometric by the EDTA method, 145	
After precipitation as phosphate along with magne- sium, 147	
CHAPTER 13. MAGNESIUM	149
Consideration of methods	149
Determination of magnesia in silicate rocks in absence of	
excessive amounts of phosphorus, alkali salts, and oxa-	
lates	150
After precipitation as phosphate, 152	
Gravimetric method: weighing as pyrophosphate, 152	
After separation of the Ammonium oxalate group, 155	
Volumetric method: (1) oxidimetric by the 8-hydroxyquino- line method, $155 - (2)$ complexometric by the EDTA meth- od, 157	

CONTENTS

CHAPTER 14. FERROUS IRON	161
Consideration of methods	161
Ferrous iron by the permanganate method, $164 -$	
Ferrous iron by the $2,2'$ -dipyridyl method, 167	
CHAPTER 15. MANGANESE	171
Consideration of methods	171
Volumetric determination, 173	
Manganese by the bismuthate method, 173	
Spectrophotometric determination, 175	
Manganese by the periodate method, 176	
CHAPTER 16. CHROMIUM	180
Consideration of methods	180
Chrome minerals	182
Chromate method, 183	
Rocks	184
Ammonia precipitates	188
Other methods	189
CHAPTER 17. ALKALIES	190
Consideration of methods	190
Preliminary group separation, 191 – Addition of	
similar concentrations of interfering elements to the	
standards, 192 – Radiation buffers, 192 – Internal	
standards, 193 – Standard addition, 193 – Ion ex-	
change separation of interfering elements, 194 –	
Scanning of emission peak and deduction of back- ground, 194 – Physical factors, 195	
CHAPTER 18. WATER AND CARBON DIOXIDE	202
Consideration of methods	202
Uncombined water, 204	
Combined water, 205	

ХI

CHAPTER 19. PHOSPHORUS	212
Consideration of methods	212
Decomposition of samples containing phosphorus	213
Attack by hydrofluoric and nitric acids, 214 -	
Fusion with sodium carbonate, 216	
Separation of phosphorus by the ion-exchange method	218
Principle of method, 218	
Spectrophotometric determination of phosphorus pent-	
oxide in silicate rocks and minerals	219
By the molybdivanadophosphoric acid method, 220	
- By the molybdenumbluephosphoric acid method,	
223	
CHAPTER 20. TOTAL SULPHUR	227
Consideration of methods	227
Gravimetric determination of Total sulphur in silicate	
rocks and minerals, containing no more than 2.5 per	
cent Total S, 228	
CHAPTER 21. FORMULAS OF MINERALS	233
Discussion	233
Calculations	233
Possible points for checking a chondrite meteoritic	
analysis	242
CHAPTER 22. DETERMINATION OF THE SPECIFIC GRAVITY	243
Rocks	243
Mineral grains	244
CHAPTER 23. NOTES ON THE PRECISION AND ACCURACY	
OF RESULTS OBTAINED IN SILICATE-ROCK ANALYSIS AND	
THE LIMIT OF ALLOWABLE ERROR	247
REFERENCES	250
INDEX	256
