A. Introduction: The Rôle of Mineralogy in the Petrology of Sedimentary Carbonates	1
B. Crystal Chemistry of Sedimentary Carbonate Minerals	5
I. Calcite-Type Minerals (Rhombohedral Carbonates)	5
1. Calcite and Isotypic Minerals	6
a) Calcite	6
b) Isotypes of Calcite	16
2. Superstructures Based on Calcite Pattern	19
a) Regular Interstratifications	19
α) Dolomite	19
β) Norsethite	30
b) Superstructures with Order in the Individual Cation Layer	37
3. Disordered Calcite-Type Structures	43
a) Magnesian Calcites	43
b) Calcium-Rich (Calcian) Dolomites	47
4. Iron-Bearing Rhombohedral Carbonates	50
a) Siderites	50
b) Iron-Bearing Dolomites or Ankerites	51
II. Aragonite	53
III. Miscellaneous Carbonates	66
1. Vaterite	66
2. Hydrous Carbonates and the Magnesite Problem	71
a) Hydrous Magnesium Carbonates	71
b) Cation Hydration and the Dehydration Barrier	76
c) Hydrated Calcium Carbonates	88
3. Alkali-Bearing Carbonates	91
C. The Polymorphism Calcite-Aragonite	97
I. Stable Relationships	97
Calcite and Aragonite-Type Structures in Systems Other than CaCO_3	99
II. The Metastable Occurrence of Aragonite in Aqueous Solutions at Normal Pressure	103
1. In the Absence of Bivalent Cations Other than Ca^{2+}	103

2. The Influence of Bivalent Cations Other than Ca^{2+}	106
a) Large Cations, Notably Strontium	106
b) Small Cations, Notably Magnesium	107
3. Interpretation of Different Growth Forms of Aragonite Oöids	116
4. The Formation of Calcite and Aragonite in Organisms	131
5. The Persistence and Transformation of Aragonite	134
D. The System $\text{CaCO}_3 - \text{MgCO}_3$	148
I. The Dolomite Question	148
II. Phase Relations in the Dry System	151
III. Systems Involving Aqueous Solutions	153
1. Hydrothermal Syntheses of Dolomite	153
2. Arguments Against the Hydrothermal Origin of Many Dolomite Formations	154
3. The Solubility of Dolomite at 25°C	156
4. Magnesian Calcites in Aqueous Systems	161
5. "Dedolomitization"	166
6. Huntite	167
IV. The Aqueous Synthesis of Norsethite, $\text{BaMg}(\text{CO}_3)_2$, a Model for Low-Temperature Dolomite Formation	167
1. General Statement	167
2. Experimental Norsethite Formation	169
3. The Mechanism of Norsethitization	174
4. Conclusions Regarding the Low-Temperature Formation of Dolomite	178
E. Petrological Summary: Reaction Series Leading from Carbonate Sediments to Carbonate Rocks	192
I. The Formation of Fresh-Water Limestones	192
II. The Evolution of Marine Limestones	192
III. Dolomitization	195
Appendix	196
