1 Introduction to Thermodynamic (Energy-Dependent) and Mechanical (Time-Dependent) Processes: What Are They and How Are They Manifested in Chemistry and Catalysis?

Gerhard F. Swiegers

1.1 Thermodynamic (<i>Energy-Dependent</i>) and Mechanical (<i>Time-Dependent</i>) Processes	1
1.2 What Is a Thermodynamic Process?	5
1.3 What Is a Mechanical Process?	7
1.4 The Difference between <i>Energy-Dependent</i> (Thermodynamic) and <i>Time-Dependent</i> (Mechanical) Processes	9
1.4.1 Time-Dependent (Mechanical) Processes Are Path-Reliant and Spatiotemporal in Character	9
1.4.2 Time-Dependent (Mechanical) Processes Have a Flat Underlying Energy Landscape (or Are Unaffected by the Energy Landscape)	10

1.4.3	Time-Dependent (Mechanical) Processes Display Deterministic Chaos; This Causes Them to be Stochastic and Complex	11
1.4.4	Time-Dependent (Mechanical) Processes Often Involve Synergies of Action	14
1.4.5	Time-Dependent (Mechanical) Processes Characterize Numerous Aspects of Human Experience	15
1.5	<i>Time- and Energy-Dependence</i> in Chemistry and Catalysis	17
1.5.1	The Origin of Time- and Energy-Dependent Processes in Chemistry	17
1.5.2	Examples of Time-Dependent Processes in Chemistry	19
1.5.3	Time- and Energy-Dependent Processes in Catalysis	21
1.5.4	Is There Such a Thing as a Time-Dependent Process in Catalysis?	23
1.6	The Aims, Structure, and Major Findings of this Series	24
1.6.1	Summary of the Key Finding: Many Enzymes Seem to be Time-Dependent Catalysts	25
1.6.2	The Aims and Structure of this Series. Summary: Other Major Findings of this Series	28
	References	34

2 Heterogeneous, Homogeneous, and Enzymatic Catalysis. A Shared Terminology and Conceptual Platform. The Alternative of Time-Dependence in Catalysis 37

Gerhard F. Swiegers

2.1	Introduction: The Problem of Conceptually Unifying Heterogeneous, Homogeneous, and Enzymatic Catalysis? Trends in Catalysis Science	37
2.2	Background: What Is Heterogeneous, Homogeneous, and Enzymatic Catalysis	38
2.2.1	Homogeneous and Heterogeneous Catalysis	38
2.2.2	Hybrid Homogeneous–Heterogeneous Catalysts	40
2.2.3	Enzymatic Catalysis	41
2.2.4	Theories and Mimicry of Enzymatic Catalysis	42
2.3	Distinctions Within Homogeneous Catalysis: <i>Single-Centered</i> and <i>Multicentered</i> Homogeneous Catalysis	44
2.3.1	Single-Centered Homogeneous Catalysts. Most Manmade Homogeneous Catalysts Are Single-Centered Catalysts	44
2.3.2	Multicentered Homogeneous Catalysts: Most Enzymes Are Multicentered Homogeneous Catalysts	46
2.4	The Distinction between <i>Single-Site/Multisite</i> Catalysts and <i>Single-Centered/MultiCentered</i> Catalysts in <i>Heterogeneous Catalysis</i> : An Important Convention Used in This Series	48

2.4.1	A Key Convention Used in This Series: A Catalytic Site Is a Collection of Atoms about Which a Reaction Is Catalyzed. A Catalytic Center Is an Atom Within that Site Which Binds and Facilitates the Transformation of a Reactant	48
2.5	The Alternative of <i>Time-Dependence</i> in Catalysis	48
	References	52
3	A Conceptual Description of Energy-Dependent (“Thermodynamic”) and Time-Dependent (“Mechanical”) Processes in Chemistry and Catalysis	55
	<i>Gerhard F. Swiegers</i>	
3.1	Introduction	55
3.2	Theoretical Considerations: Common Processes in Uncatalyzed Reactions	56
3.2.1	Reactions as Collisions Between Molecules	56
3.2.2	The Fundamental Origin of Energy-Dependent and Time-Dependent Reactions	57
3.2.3	Time-Dependent and Energy-Dependent Domains Were First Observed in Unimolecular Gas-Phase Reactions	58
3.2.4	The Pathway of the Reaction Is also Controlled by the Least-Likely Step in the Sequence	59
3.2.5	Transition State Theory (TST) Describes the Pathway and Rate of Energy-Dependent Reactions. Transition State Theory Corresponds to the High-Pressure Limit of Hinshelwood–RRK Theory	61
3.2.6	Time-Dependent Reactions in the Liquid Phase: Some Examples	63
3.2.7	The Transition between Energy-Dependence and Time-Dependence as a Function of Temperature. Curvature in Arrhenius Plots	65
3.2.8	Methods of Creating Time-Dependent Reactions	67
3.2.9	Summary: The Key Properties of Time-Dependent and Energy-Dependent Reactions	68
3.3	Theoretical Considerations: Common Processes in Catalyzed Reactions	68
3.3.1	Catalyzed Reactions Are More Likely to be Time-Dependent than Are Uncatalyzed Reactions	68
3.3.2	Catalysis Changes the Reaction Processes	69
3.3.3	Physical Manifestation of Time- and Energy-Dependence in Catalysts	72
3.3.4	The Distinction Between Time-Dependent Catalysis and Diffusion-Controlled Catalysis	72
3.3.5	Energy-Dependent and Time-Dependent Control of Catalysis	73

3.3.6	The Influence of the Product Release Step	74
3.4	Conclusions: Energy- and Time-Dependent Catalysis	75
	Acknowledgments	75
	References	76
4	Time-Dependence in Heterogeneous Catalysis. Sabatier's Principle Describes Two Independent Catalytic Realms: Time-Dependent ("Mechanical") Catalysis and Energy-Dependent ("Thermodynamic") Catalysis	77
	<i>Gerhard F. Swiegers</i>	
4.1	Introduction	77
4.2	Sabatier's Principle in Heterogeneous Catalysis	79
4.2.1	Volcano Plots	79
4.2.2	Some Important Points about Volcano Plots	82
4.2.3	Time-Dependent Catalysis in Volcano Plots	82
4.2.3.1	How Is Time-Dependence Created on the Left-Hand Side of the Volcano Plot?	82
4.2.3.2	Why Do Volcano Plots Slope Upward on the Left	84
4.2.3.3	The Rate-Determining Step in a Time-Dependent Catalyst	86
4.2.3.4	The Physical Manifestation of Time-Dependent Catalysis. "Saturation" of a Time-Dependent Catalyst	87
4.2.4	Energy-Dependent Catalysis in Volcano Plots	88
4.2.4.1	How Is Energy-Dependence Created on the Right-Hand Side of the Volcano Plot?	88
4.2.4.2	Why Do Volcano Plots Slope Downward on the Right?	88
4.2.4.3	The Rate-Determining Step in an Energy-Dependent Catalyst	89
4.2.4.4	The Physical Manifestation of Energy-Dependence. Saturation in an Energy-Dependent Catalyst	89
4.2.5	The Physical Origin of Sabatier's Principle	89
4.2.6	Other Plots Illustrating Sabatier's Principle	90
4.2.7	Modeling of Volcano Plots	91
4.2.8	Reaction Pathway as a Function of the Most-Favored Transition State	92
4.3	Exceptions to Sabatier's Principle	93
4.4	Sabatier's Principle in Homogeneous Catalysis	93
4.5	Conclusions. Sabatier's Principle Describes Two Independent Catalytic Domains: Energy- and Time-Dependent Catalysis	94
	Acknowledgments	95

5 Time-Dependence in Homogeneous Catalysis. 1. Many Enzymes Display the Hallmarks of Time-Dependent (“Mechanical”) Catalysis. Nonbiological Homogeneous Catalysts Are Typically Energy-Dependent (“Thermodynamic”) Catalysts	97
<i>Robin Brimblecombe, Jun Chen, Junhua Huang, Ulrich T. Mueller-Westerhoff, and Gerhard F. Swieggers</i>	
5.1 Introduction	97
5.2 Historical Background: Are Enzymes Generally <i>Energy-Dependent</i> or <i>Time-Dependent</i> Catalysts?	99
5.3 The Methodology of This Chapter: Identify, Contrast, and Rationalize the Common Processes Present in Biological and Nonbiological Homogeneous Catalysts	100
5.4 Does Michaelis–Menten Kinetics in Enzymes Indicate that They Are <i>Time-Dependent</i> Catalysts?	102
5.4.1 Michaelis–Menten Kinetics	102
5.4.2 Kinetics in Most Nonbiological Catalysts	103
5.4.3 The Contradiction of Saturation Kinetics in Enzymes	103
5.4.4 Saturation in Time- and Energy-Dependent Catalysts. Saturation Kinetics Is Necessarily an Indication of Time-Dependence	104
5.4.5 Physical Studies of the Rate Processes in Enzymes Are Consistent with a Time-Dependent Action	106
5.4.6 A Time-Dependent Catalyst Cannot Become an Energy-Dependent Catalyst, or vice versa, Without Changing the Temperature or Chemically Altering the Reactivity of the Reactants	107
5.4.7 The Current View of Michaelis–Menten Kinetics Is Flawed by an Unwarranted Assumption	107
5.4.8 Summary: Michaelis–Menten Kinetics Is Characteristic of Time-Dependent Catalysis. Time-Dependent Catalysis Provides an Explanation for Michaelis–Menten Kinetics in Enzymes	109
5.5 Other General Characteristics of Catalysis by Enzymes and Comparable Nonbiological Homogeneous Catalysts	110
5.5.1 Enzymes Employ Weak and Dynamic Individual Binding Interactions with Their Substrates. Nonbiological Catalysts Do Not	110
5.5.2 Enzymes Display Transition State Complementarity. Nonbiological Catalysts Do Not	111
5.5.3 Enzymatic Catalysis Is “Structure-Sensitive.” Nonbiological Catalysis Is “Structure-Insensitive”	112
5.5.4 Enzymes Transform Catalytically Unconventional Groups into Potent Catalysts. Nonbiological Catalysts Use Only Conventional Catalytic Groups	113
5.5.5 Enzymes Catalyze Forward and Reverse Reactions. Nonbiological Catalysts Do Not	113

5.5.6	Enzymes Display High Selectivity and Activity. Nonbiological Catalysts Do Not	115
5.5.7	Enzymes Display Convergent Synergies. Nonbiological Catalysts Display Complementary Synergies	115
5.5.8	Summary	116
5.6	Rationalization of the Underlying Processes. The Mechanism of Action in Time-Dependent and Energy-Dependent Catalysts	117
5.6.1	Common Processes in Multicentered Homogeneous Catalysts	117
5.6.2	The Influence of the Strength of the Individual Catalyst–Reactant Binding Interactions	119
5.6.3	The Coexistence of Transition State Complementarity, Structure-Sensitive Catalysis, and Unconventional Catalytic Groups in Enzymes Is Caused by their Weak Individual Binding Interactions	122
5.6.4	The Origin of the Time-Dependence and the Synergies of Enzymes	123
5.6.5	The Mechanism of Time-Dependence in Enzymes Resolves the Contradiction of a Kinetically Observed Rapidly Forming and Dissociating Intermediate in the Face of Strong Overall Substrate Binding	125
5.6.6	Catalysis in Enzymes Involves Synchronization of Enzyme Binding and Enzyme Flexing	125
5.6.7	Summary: The Origin of the General Properties of Enzymes	127
5.6.8	Catalysis in Nonbiological Analogues Depends on the Activation Energy E_a	127
5.6.9	Enzymatic Selectivity and Synergies Derive from Time-Dependence	128
5.6.10	Enzymatic Activity Is Consistent with Time-Dependence	129
5.7	All Generalizations Support Time-Dependence in Enzymes	129
5.8	Time-Dependence in a Nonbiological Catalyst Generates the Distinctive Properties of Enzymes	130
5.9	Conclusion: Many Enzymes Are Time-Dependent Catalysts	133
	Acknowledgments	134

6.3	The Action of <i>Energy-Dependent</i> , Multicentered Homogeneous Catalysts	141
6.4	The Action of <i>Time-Dependent</i> , Multicentered Homogeneous Catalysts	146
6.4.1	The Activation Energy E_a Does Not Provide a True Measure of the Threshold Energy in Time-Dependent Catalysts	148
6.4.2	Weak and Dynamic Binding and Activation Is Sufficient to Fulfill the Threshold Energy in Time-Dependent Catalysts	149
6.4.3	Transition State Formation in a Time-Dependent Catalyst Can Be Thought of as a Coordinated Mechanical Process	150
6.4.4	Time-Dependent Catalysts Are Machine-Like (Mechanical) in Their Catalytic Action	150
6.4.5	The Origin of Michaelis–Menten Kinetics in Time-Dependent Catalysts	151
6.4.6	Time-Dependent Catalysts like Many Enzymes Display All of the Characteristic Hallmarks of Mechanical Processes	153
6.4.7	Additional Insights into Enzymatic Catalysis: The Bidirectionality of Enzymatic Catalysis Originates from the Mechanical Nature of the Catalytic Action	154
6.4.8	Additional Insights into Enzymatic Catalysis: Many Enzymes Select the First-Encountered Transition State, Rather than the Lowest Energy Transition State	155
6.5	The Importance of Recognizing <i>Time-Dependent</i> Catalysis	155
6.6	Time-Dependent Catalysis Is Very Different to Energy-Dependent Catalysis and Therefore Seems Unfamiliar	156
6.7	Conclusions for Biology	157
6.8	Conclusions for Homogeneous Catalysis	157
6.9	The “Ideal” Homogeneous Catalyst	158
6.10	Conclusions for the Conceptual Unity of the Field of Catalysis	158

7.2.11	The Spatiotemporal Hypothesis	169
7.3	Theories Explaining Enzymatic Catalysis Fall into Two Camps: Energy-Dependent and Time-Dependent Catalysis	169
7.3.1	Haldane's Strain Theory and Fersht's Concept of Stress and Strain Are Valid Explanations for Rate Accelerations but Do Not Seem to be Responsible for the Rate Accelerations of Many Enzymes	171
7.3.2	Theories Based on Reaction Entropy Are Valid Explanations for Rate Accelerations but Do Not Seem to be Behind the Rate Accelerations of Many Enzymes	172
7.3.3	Experiments Studying Intramolecular Reaction Rates Were Probably Often Conceptually Contradictory	172
7.3.4	Theories of "Coupled" Protein Motions and Machine-Like Catalytic Actions Seem to Be Generally Accurate Descriptions of Enzymatic Catalysis	173
7.4	Studies Verifying Pauling's Theory in Model Systems Are Correct, but Describe Energy-Dependent and not Time-Dependent Catalysis	174
7.5	The Anomaly Described in the Spatiotemporal Hypothesis Originates, in Part, from the Onset of Time-Dependence	176
