

CONTENTS

Acknowledgements and Notations	V
INTRODUCTION	1
1. BASIC CONSIDERATIONS ABOUT ELECTRO-MAGNETIC RADIATION AND MOLECULE VIBRATIONS	3
References	7
2. INSTRUMENTAL	9
Monochromators	9
Prisms, 9 — Gratings, 10	
Sources of light	13
Nernst filament, 13 — Globar, 13 — Nickel—chrome wire, 13	
Detectors	13
Thermocouples, 13 — Bolometers, 13 — Golay cell, 13	
Calibration	17
Spectrophotometers	17
Description of the Leitz prism infrared-spectrophotometer Model III, 17 — Description of the Perkin Elmer prism infrared-spectrophotometer Model 13, 18 — Description of the Perkin Elmer grating spectrophotometer Model 225, 21	
History	21
References	24
3. PREPARATION OF THE SAMPLES	25
Scattering	25
Christiansen effect	25
Grinding	25
Powder film method	26
Mull method	26
Pellet method	27
Reflection method	28
References	28
4. ASSIGNMENT OF INFRARED BANDS	31
Correlations	31
References	31
Adsorbed water and crystal water	33
Remarks	33
References	35
Heating	36
Dickite, kaolinite, fire clay mineral, halloysite, 36 — Sericite, illite, glauconite, 36 — Montmorillonite, hectorite, nontronite, 36 — Sepiolite, vermiculite, 36	
Deuteration	36
Electric vector of the incident rays and the transition moment of the vibration	55
Feldspars	55
Carbonates	55
Clay minerals	58
5. QUANTITATIVE ANALYSIS	59
References	63
6. CLAY- AND RELATED MINERALS	65
Kaolin minerals (kandites)	65
Dickite and nacrite, 65 — Kaolinite, 65 — Halloysite, 66 — Hydrohalloysite, 66	
Serpentine minerals	66
Serpentine, 66 — Chrysotile, 67 — Hydrochrysotile, 67 — Antigorite, 67 — Hydroantigorite, 67 — Lizardite, 67 — Unst-type mineral, 67 — Amesite, 68 — Hydroamesite, 68 — Greenalite, 68 — Cronstedtite, 68 — Deweylite (gymnite), 68 — Monothermite, 69 — Anauxite, 69	
References	69
Pyrophyllite, talc, brucite	112
Smectites (montmorillonite minerals)	112
Montmorillonite, 113 — Soil montmorillonite, soil beidellite, 113 — Saponite, 114 — Hectorite, 114 — Nontronite (morencite, pinguite, faratsihite, chloropal, 114 — Wolchonskoite (volkonskoite), 114 — Mn-montmorillonite, 115 — Nickel sapohite, 115 — Sauconite (tallow clay), 115 — Medmontite, 115	
References	116
Mica minerals	117
Diocahedral minerals	117
Muscovite, 117 — Illite, 117 — Swelling illite, ammersooite, 118 — Leverrierite, 118 — Iron illite, 119 — Sarospatakite, 119 — Potassium bentonite, 119 — Glauconite, celadonite, 119 — Miscellany, 120	
Triocahedral minerals	121
Biotite, 121 — Phlogite, 121 — Hydrated biotite, 121 — Vermiculite, 121 — Lepidolite, 122 — Zinnwaldite, 122	
References	122
Chlorite minerals	171
Coarse minerals in rocks and deposits, 171 — Hydrated chlorite, 172 — Fine chlorite minerals in sediments, 172 — Sedimentary chlorite, 172 — Swelling chlorite, 172 — Soil chlorite, 172 — Swelling soil chlorite, 172	
References	173
Interstratified minerals	184
Nonregular illite—montmorillonite (swelling illite), 184 — Non regular talc—saponite (stevensite), 184 — Regular illite—montmorillonite, 185 — Regular paragonite-like montmorillonite (allevardite, rectorite), 185 — Regular talc—saponite (alietite), 185 — Regular chlorite—swelling chlorite (corrensite), 185 — Regular chlorite—saponite and non-regular (randomly) saponite—swelling chlorite, 186 — Regular biotite—vermiculite (hydrobiotite), 186 — Regular Al chlorite—montmorillonite (tosudite), 186 — Regular Al-Mg chlorite—montmorillonite, 187	
References	187
Pseudo layer silicates with chain structure (hormites)	188
Attapulgit (palygorskite), 188 — Sepiolite, 188 — Sea foam (Meerschaum, écume de mer), 189 — Mountain leather, mountain cork, Bergkork, Bergholz, Schweizerite, 189	
References	189
Structure of various clay minerals	190
Iron minerals	192
Goethite (needle iron ore) and limonite (hydrogoethite, soil goethite), 192 — Lepidocrocite (Rubin glimmer), 192 — Maghemite, 192 — Hematite, 193 — Magnetite, 193	

Reference	193
Aluminium minerals	194
Gibbsite (hydrargillite), 194 — Nordstrandite, 194 — Bayerite, 194 — Boehmite, 194 — Diaspore, 195 — Corundum, 195	
References	195
Silica minerals	196
Quartz, 196 — Tridymite, 197 — Cristobalite, 197 — Chert, hornrock, chalcedon, agate, flint, opal, geyselite, 197	
Reference	198
7. ADMIXTURES	241
Carbonates	241
Calcite and aragonite, 241 — Magnesite, gel magnesite, 241 — Hydromagnesite and artifi- cial magnesites, 248 — Dolomite, huntite, ankerite, 248 — Siderite (ferrocarbonate), 248 — Gaylussite, trona, 248	
Sulfur, sulfates and sulfides	249
Sulfur, 249 — Sulfates, 249 — Sulfides: pyrrhotite, marcasite, pyrite, 253	
Amphiboles and pyroxenes	254
Amphibole, actinolite, tremolite (amphibole group), 254 — Augite, hypersthene, enstatite (pyroxene group), 254	
Titano minerals	257
Anatase, rutile, brookite, titanite (sphene), ilmenite, 257	
Feldspars	260
Na-Ca feldspars (plagioclases)—triclinic, 260 — Alkali feldspars, 260 — Perthites, 260 — Moonstone, 260 — Ba-feldspars, 269	
References	269
Manganese minerals	270
8. AMORPHOUS MATERIALS	275
Silicic acid, 275 — Biogeneous siliceous material (diatomaceous earth, sponge spicules), 275 — Obsidian, perlite, windowglass, 276 — Allophane, 276	
9. MISCELLANY	283
Vivianite	283

References	283
Olivine and forsterite	284
Mullite and sillimanite	286
References	286
Chloritoid, ottrelite	288
References	288
Stilpnomelane	290
Zeolites	290
Natrolite, heulandite, phillipsite, chabasite, mordenite, 292	
Cation and anion exchangers	301
10. ORGANIC MATTER	305
General	305
Reference	305
Peat, brown coal, lignite, hard coal, anthra- cite, coke, 305 — Lignin, 306	
References	306
Humic acids	310
Humic acids, natural, 310 — Humic acids from hydroquinones, 310 — Fulvic acids, 310 — Graphite (spectral coal, carbon black), 314 — Bitumen, 314 — Amber (bernstein, succinite), 315	
Reference	315
11. INORGANIC (CLAY)—ORGANIC COM- PLEXES	317
CONCLUDING REMARKS	319
APPENDIX 1. Conversion of wavelengths (μm) to wavenumbers (cm^{-1})	321
APPENDIX 2. The most characteristic bands of clay- and clay-related minerals, and of their admixtures	322
APPENDIX 3. Infrared spectra of various sulfate minerals from different origin	332
APPENDIX 4. The most characteristic bands of sulfates	344
BIBLIOGRAPHY	347
SUBJECT INDEX	389
