Abstract	1
Zusammenfassung	1
Preface	4
Acknowledgement	5
1. Introduction and Problems	6
1.1 Occurrence of Marine Oölitic Sediments in Time and Space	6
1.11 Paleogeographic Significance of Marine Oöids	7
1.12 Importance of Modern Oöid Formation on the Great Bahama Bank – A Quantitative Example	8
1.2 Theories of Oöid Formation	10
1.21 History and Discussion of the “Biological Theories”	11
1.211 Theories Concerning Direct Biological influence	11
1.212 Theories Concerning Indirect Biological Influence	12
1.213 Discussion of Arguments Against Oöid Biogenesis	13
1.3 Is the “Oöid Problem” a Terminological problem?	14
1.31 The Range of Problems of Marine Oöid Formation	15
1.4 The Problem of Grapestone Formation and its Relation to the “Oöid Problem”	15
1.41 Occurrence of Grapestones	16
1.42 Nomenclature of Grapestone Aggregates	16
1.43 The Problem of Grapestone “Cement”	16
2. Scanning Electron Microscope Observations	18
2.1 Ultrastructures of Marine Oöids	18
2.11 Discrimination of Organic and Inorganic Structures	18
2.12 Structures of the Grain Surface	19
2.121 Rods and Granules	19
2.121.1 Orientation of the Rods	20
2.122 Other Particles Adhering to the Oöid Surface	21
2.13 Fabric of the Cortex	21
2.14 Cortex Voids	22
2.141 Inter-Particle Porosity	22
2.142 Biogenic Porosity, the Habitat of Algae	22
2.142.1 Pores	22
2.142.2 Burrows	22
2.142.21 Tunnelling Burrows	23
2.142.22 Configuration of the Tunnelling System	23
2.142.23 Tube-Like Tunnels	24
2.142.24 ‘Spherical Caverns’	24
2.142.25 Burrows in Pellets	24
2.143 Collapse Features on the Oöid Surface	25
2.15 Structures of Surface Corrosion	25
2.16 Organic Matter in Oöids	26
2.2 Ultrastructures of Grapestones	26
2.21 Introduction – Stages of Agglutination	26

2.22	Structures of the Pre-Grapestone Stage	26
2.221	Surface Structures	27
2.23	Structures of the Grapestone Stage	27
2.231	Mucilage Bindings and Their Relation to Carbonate Particles	27
2.232	Burrows and 'Tubiform Constructions' in Grapestones and the Question of Calcified Algal Threads	28
2.232.1	Burrows	28
2.232.2	Epilithic 'Tubiform Constructions'	28
2.233	Agglutination Versus Cementation of Grapestones	29
2.24	Structures of the Transitional Stage	30
2.25	Structures of the Botryoidal Stage	30
2.26	Biogenic Alterations of Grapestones	30
2.261	Constructiva Features	31
2.261.1	Foraminifera	31
2.261.2	A Serpulid-Like Tube	31
2.262	Destructive Alterations	31
2.263	Organic Features of Uncertain Relationship to Aggregates	32
2.3	Crystallization in Voids of Oöids, Pellets and Grapestones	32
2.31	Aragonite Filling	33
2.32	(Mg-?) Calcite Filling	33
2.4	Comparative Investigations	33
2.41	Ultrastructures of Selected Calcareous Algae	33
2.42	Ultrastructures of Spheroids of the High-Salinity Environment and their Relation to Marine Oöid Structures	34
2.43	Structural Comparison with Other Non-Marine Coated Grains	34
3.	Interpretation and Discussion	35
3.1	Building Units of Oöids and Spheroids	35
3.11	The Rod-and-Granule Group	35
3.12	The Crystalline Group	36
3.121	Primary Radial-Crystalline Structures	36
3.13	Comparison of Structures and Origin of 'Rods'	37
3.14	Remarks on the Nomenclature of Coated Grains	38
3.141	Coated Grains	38
3.141.1	Oöid and Oölite	38
3.141.2	Spheroid and Spherolite	39
3.141.3	Oncoids	39
3.2	The Role of Thallophytes in Oöids	40
3.21	Observations and Implications	40
3.22	Formation of Aragonitic Particles by Algae	40
3.23	Formation of the Oöid Cortex	42
3.231	Significance of the Burrowing Activity of Thallophytes	42
3.232	Structure of the Calcification	43
3.233	Infestation of Oöids by Burrowing Algae?	44
3.3	Discussion: Phytogenesis of Marine Oöids	46
3.31	Environmental Conditions	46

3.311 Elevated Temperature of Sea Water	46
3.312 CaCO_3 Saturation of Surface Sea Water	46
3.313 The Role of Water Turbulence	47
3.313.1 Quiet-Water Oöids	47
3.313.2 Oöid Formation in High-Energy Environment	47
3.313.3 Granulometry of Oöid Sediments	48
3.313.4 Coherence of Particles Within the Oöid Laminae	48
3.314 The Role of Nuclei	49
3.315 The Role of Light	49
3.316 The Role of Nutrients	50
3.32 Chemical and Isotopic Peculiarities of Oöids and Grapestones in the Light of their Phytogenesis	50
3.321 Strontium Content	50
3.322 Fluorine Content	51
3.323 $^{13}\text{C}/^{12}\text{C}$ Ratio	51
3.4 Interpretation and Discussion of Grapestone Aggregation	51
3.41 The Process of Aggregation	52
3.5 Differentiation and Patterns of Oöid and Grapestone Facies	54
3.51 Relation between Different Phytogenic Shallow Water Sediments	55
3.52 Implications on the "Carbonate Mud Problem"	55
3.53 Annotation to the Term "Non-Skeletal"	56
3.6 Organic Matter in Oöids and Grapestones as a Source of Carbohydrates	56
3.7 "Micritization" in Oöids, Grapestones and Skeletal Fragments	56
3.8 Remarks on the Mineralogy of Ancient "Non-Skeletal" Carbonates	58
3.9 Open Problems	60
Conclusions	60
Appendix: Localities and Description of Samples	65
Bibliography	67
Plates (1–18) of Scanning Electron Micrographs	78
