|--|------|
| Preface | viii |
| Chapter 1. Background and history of the problem | 1 |
| 1.1 The climate of the Holocene | 1 |
| 1.2 Principal sources of data on the Earth's climate system | 10 |
| 1.2.1 Background | 10 |
| 1.2.2 Short-term climate changes | 15 |
| 1.2.3 Medium- and long-term climate changes | 19 |
| 1.3 Borehole climatology | 27 |
| Chapter 2. Climate change and subsurface temperature | 37 |
| 2.1 Methods and technique to carry out borehole temperature measurements | 39 |
| 2.2 Subsurface temperature field and its response to changing surface conditions (climate) | 41 |
| 2.3 Geothermal method of climate reconstruction: principles, resolution, limitations (forward and inverse techniques, sources of perturbation) | 49 |
| 2.3.1 Background and history | 49 |
| 2.3.2 Theory of 1-D heat conduction | 50 |
| 2.3.3 Ramp/step method | 52 |
| 2.3.4 Singular value decomposition (SVD) algorithm | 53 |
| 2.3.5 Least squares inversion in functional space (FSI) | 60 |
| 2.3.6 General comparison of the methods | 62 |
| 2.4 Comparison of ground surface temperature (GST) reconstruction methods | 64 |
| 2.4.1 Effects of smoothing constraints in different methods and the noise in the data: synthetic examples | 65 |
| 2.4.2 Effect of systematic errors in thermal conductivity | 72 |
| 2.4.3 Using additional information: field example | 77 |
| 2.4.4 Recent testing of borehole inversion methods in simulated climates | 82 |
| 2.4.5 Interpreting ensembles of borehole temperature logs | 86 |
| 2.5 Ground-air temperature coupling: pre-observational mean temperature (POM) | 89 |
| 2.6 Ground-air temperature coupling: effect of various environmental changes | 96 |
| 2.6.1 Background | 96 |
| 2.6.2 Snow cover and ground freezing | 98 |
| 2.6.3 Effect of precipitation | 106 |
| 2.6.4 Effect of surface vegetation | 116 |
| 2.6.5 Long-term soil-air temperature coupling | 123 |
| 2.6.6 Other possible terrain effects | 128 |
| 2.7 Non-conductive heat transfer effect on the GST reconstruction (groundwater flow effects) | 133 |

| | | |
|-------------------|--|------------|
| 2.8 | Climate change and permafrost | 149 |
| 2.9 | Climate from ice boreholes | 165 |
| Chapter 3. | Ground temperature histories: evidence of changing climate | 175 |
| 3.1 | Timescales of the reconstructed GST histories (from Ice Age to the Present) | 175 |
| 3.1.1 | GST changes in the last two millennia (spatial and temporal patterns) | 177 |
| 3.1.2 | Recent warming | 196 |
| 3.2 | Temperature trends over past five centuries reconstructed from borehole temperature data (spatial and temporal patterns) | 208 |
| 3.3 | Correlation between GST climate reconstruction, meteorological data, and proxies | 219 |
| 3.4 | Is there any anthropogenic component in the present-day global warming? Evidence from the underground | 226 |
| 3.4.1 | Background | 227 |
| 3.4.2 | Greenhouse gases and climate change | 228 |
| 3.4.3 | Was the twentieth century climate unusual? Evidence from the underground | 232 |
| 3.4.4 | The elements of optimal detection of the climate change and attribution of the causes | 235 |
| 3.4.5 | Granger causality to investigate the human influence on climate | 245 |
| 3.5 | Deep continental drilling and signature of remote climate changes | 250 |
| 3.5.1 | Late Quaternary GST changes inferred from the deep hole measurements | 250 |
| 3.5.2 | Climate signature in superdeep boreholes | 260 |
| Chapter 4. | Subsurface temperature monitoring: present-day temperature change and its variability | 267 |
| 4.1 | Geothermal observatories and subsurface temperature monitoring | 267 |
| 4.2 | Detection of the present-day warming by temperature monitoring in shallow boreholes | 269 |
| 4.2.1 | Emigrant pass observatory, Utah | 279 |
| 4.2.2 | The Sornfelli borehole | 280 |
| 4.2.3 | Kamchatka | 281 |
| 4.2.4 | Livingston Island, Antarctic | 282 |
| 4.3 | Recent climate variability | 283 |
| 4.3.1 | Climate change and climate variability | 283 |
| 4.3.2 | Trends in the recent climate variability | 287 |
| 4.3.3 | Structure of the stochastic component of the short-term climate variability | 295 |
| | Conclusions and perspectives of future progress | 305 |
| | References | 307 |
| | Subject Index | 331 |
