Preface

xiii

Part 1 Mechanisms

1. Biomineralization: The Discipline

- I. Kinds of Biominerals and the Organisms That Form Them 4
- II. Biological Functions of Minerals 5
- III. General Principles of Biomineralization 9
- References 10

2. The Deposition of Minerals

- I. Fluid Supersaturation 11
- II. Crystal Nucleation 13
- III. Crystals and Their Growth 15
- References 20

3. The Origins of Biomineralization—Microbial Systems

- I. Biotic and Abiotic Interactions 21
- II. Bacterial Mineralization in the Environment 22
- III. Bioaccumulation and Intracellular Mineralization 26
- References 30

4. Eukaryotic Cells and the Accumulation of Ions	
I. Compartmentalization	32
II. Ion Pumps	33
III. Anion Formation	37
References	40
5. The Control of Mineralization	
I. Organic Matrix	42
II. Organic Matrix and Nucleation	46
III. Organic Matrix and Crystal Orientation	47
IV. Inorganic Modifiers of Crystal Growth	49
References	51
 Part 2	
Cellular Organizations	
6. Protoctista—Secreted Sculptures	
I. Protozoa and the Diversity of Minerals	58
II. Calcification and Coccolithophorids	66
III. Summary	79
References	80
7. Plant Mineralization—Photosynthesis and Cell Walls	
I. Mineralizing Algal Systems	87
II. Mineralization and Cell Walls	89
III. Effects of Photosynthesis	96
IV. Mineral Deposition in Freshwater Algae and Plants—Extracellular Mineralization	99
V. Summary	102
References	103
8. Plant Mineralization—Ions, Silicification, and the Transpiration Stream	
I. Ion Fluxes	106
II. Cell Specialization	110
III. Isolated Vacuoles and Vesicles	111
IV. Calcium Oxalate Deposition	111
V. Silica Deposition in Higher Plants	117
VI. Calcium Carbonate Deposition	125
VII. Summary	126
References	127

9. Sponges—Spicules and Simple Skeletons

I. The Macroskeleton	134
II. The Mineral Skeleton	135
III. Sponge Spicules and Their Formation	139
IV. Unusual Aspects of Mineralization in Sponges	142
V. Summary	143
References	144

10. Echinoderms—Cells and Syncytia

I. The Mineral System	150
II. Echinoderm Mineral	156
III. Mineral Organic Matrix	159
IV. Sources of Echinoid CaCO_3	161
V. Cells and Cellular Cooperation	162
VI. Summary	167
References	168

11. Coelenterates—Epithelia, Symbiotic Influences, and Energy Metabolism

I. Horny Corals—Gorgonacea	174
II. Stony Corals—Scleractinia	178
III. Coral Reefs	185
IV. Summary	186
References	187

12. Annelids—Glandular Secretions

I. Lumbricidae	190
II. Serpulid Polychaetes	195
III. Summary	202
References	203

13. Crustacea—The Dynamics of Epithelial Movements

I. The Mineralizing System	206
II. Mineral Material	210
III. Ion Transport	211
IV. Mineralization	213
V. Calcium Storage	215
VI. Barnacles	218
VII. Summary	226
References	228

14. Molluscs—Epithelial Control of Matrix and Minerals

I. The Mineralizing System	231
II. Mechanisms of Mineralization	233
III. Shell Matrix	237
IV. Crystal Morphology	238
V. Crystal Patterns of Shell	241
VI. Formation of Shell Layers	245
VII. Endocrine Influences on Mineralization	247
VIII. Additional Mineralizing Systems	249
IX. Summary	255
References	256

15. Brachiopods—Fluorapatites and Calcareous Shells

I. The Mineral System	262
II. Mechanisms of Mineralization	264
III. Zonation	270
IV. Ion Transport	270
V. Summary	271
References	272

16. Vertebrates—Phosphatic Endoskeletons

I. Otoliths and Otoconia	275
II. Eggshell Formation	280
III. Bone Formation	284
IV. Summary	292
References	293

Part 3 Global Aspects

17. Biogeochemical Cycles—Minerals and the Origin of Biomineralization

I. Early Concepts of the Earth's Crust	299
II. Continental Drift	301
III. Biogeochemical Cycling	301
IV. Oceanographic Cycling	305
V. Origins of Biomineralization	309
References	312

18. Overview and Perspective

I. The Chemical Approach	314
II. The Biological Approach	315

Contents	xi
III. The Geological Approach	316
IV. The Components of Biomineralization	318
V. Future Studies on Biomineralization	322
References	325
Index	327
