

Contents

List of plates	xii
1. Introduction	1
2. Volcanic rocks and exhalative ores: the general nature of the ores and their environments	7
3. Historical: development of ideas on the origin of exhalative ores	10
4. Derivation of the exhalations The leaching hypothesis. Persistence of the magmatic hypothesis. Concluding statement.	18
5. Petrology of the Solomon Islands Younger Volcanic Suite (SIYVS) Principal rock types. Major element chemistry. Principal minerals. Lava nomenclature. Concluding statement.	26
6. Copper Copper in lavas of the marine environment. Chemical properties and crystal chemistry of copper. The incidence of copper in the principal mineral species of the Solomon Islands Younger Volcanic Suite. Crystal:melt partitioning. The incidence of whole-rock copper in the Solomon Islands Younger Volcanic Suite. Concluding statement.	53
7. Zinc Zinc in lavas of the marine environment. Chemical properties and crystal chemistry of zinc. The incidence of zinc in the principal mineral species of the Solomon Islands Younger Volcanic Suite. Crystal:melt partitioning. The incidence of whole-rock zinc in the Solomon Islands Younger Volcanic Suite. Concluding statement.	75
8. Lead Lead in lavas of the marine environment. Chemical properties and crystal chemistry of lead. The incidence of lead in the principal mineral species of the Solomon Islands Younger Volcanic Suite. Crystal:melt partitioning. The incidence of whole-rock lead in the Solomon Islands Younger Volcanic Suite. Concluding statement.	96
9. Barium Barium in lavas of the marine environment. Chemical properties and crystal chemistry of barium. The incidence of barium in the principal mineral species of the Solomon Islands	108

Younger Volcanic Suite. Crystal:melt partitioning. The incidence of whole-rock barium in the Solomon Islands Younger Volcanic Suite. Concluding statement.

10. Strontium 120

Strontium in lavas of the marine environment. Chemical properties and crystal chemistry of strontium. The incidence of strontium in the principal mineral species of the Solomon Islands Younger Volcanic Suite. Crystal:melt partitioning. The incidence of whole-rock strontium in the Solomon Islands Younger Volcanic Suite. Concluding statement.

11. Phosphorus 135

Phosphorus in lavas of the marine environment. Chemical properties and crystal chemistry of phosphorus. The incidence of phosphorus in the principal mineral species of the Solomon Islands Younger Volcanic Suite. Crystal:melt partitioning. The incidence of whole-rock phosphorus in the Solomon Islands Younger Volcanic Suite. Concluding statement.

12. Calcium 148

Chemical properties and crystal chemistry of calcium. The incidence of whole-rock calcium in the Solomon Islands Younger Volcanic Suite. Concluding statement.

13. Titanium 154

Titanium in lavas of the marine environment. Chemical properties and crystal chemistry of titanium. The incidence of titanium in the principal mineral species of the Solomon Islands Younger Volcanic Suite. Crystal:melt partitioning. The incidence of whole-rock titanium in the Solomon Islands Younger Volcanic Suite. Concluding statement.

14. Vanadium 169

Vanadium in lavas of the marine environment. Chemical properties and crystal chemistry of vanadium. The incidence of vanadium in the principal mineral species of the Solomon Islands Younger Volcanic Suite. Crystal:melt partitioning. The incidence of whole-rock vanadium in the Solomon Islands Younger Volcanic Suite. Concluding statement.

15. Chromium 183

Chromium in lavas of the marine environment. Chemical properties and crystal chemistry of chromium. The incidence of chromium in the principal mineral species of the Solomon Islands Younger Volcanic Suite. Crystal:melt partitioning. The incidence of whole-rock chromium in the Solomon Islands Younger Volcanic Suite. Concluding statement.

16. Manganese 203

Manganese in lavas of the marine environment. Chemical properties and crystal chemistry of manganese. The incidence of manganese in the principal mineral species of the Solomon Islands Younger Volcanic Suite. Crystal:melt partitioning. Manganese–zinc relations in the Solomons minerals. The incidence of whole-rock manganese in the Solomon Islands Younger Volcanic Suite. Concluding statement.

17. Iron	223
Chemical properties and crystal chemistry of iron. The incidence of whole-rock iron in the Solomon Islands Younger Volcanic Suite. Concluding statement.	
18. Cobalt	228
Cobalt in lavas of the marine environment. Chemical properties and crystal chemistry of cobalt. The incidence of cobalt in the principal mineral species of the Solomon Islands Younger Volcanic Suite. Crystal:melt partitioning. The incidence of whole-rock cobalt in the Solomon Islands Younger Volcanic Suite. Concluding statement.	
19. Nickel	244
Nickel in lavas of the marine environment. Chemical properties and crystal chemistry of nickel. The incidence of nickel in the principal mineral species of the Solomon Islands Younger Volcanic Suite. Crystal:melt partitioning. The incidence of whole-rock nickel in the Solomon Islands Younger Volcanic Suite. Concluding statement.	
20. Sundry elements	264
Sulphur. Chlorine. Fluorine. Rubidium. Zirconium. Arsenic, antimony, bismuth. Molybdenum. Gold and silver. Cadmium. Gallium. Tungsten. Uranium. Concluding statement.	
21. Abundance patterns in the crystallizing melt	280
<i>Paragenesis and context of crystallization. Principal minerals and their patterns of trace-element acceptance. Principal trace-element abundance patterns in the Solomons lavas. Crystal subtraction and element abundance. Concluding statement.</i>	
22. The ore elements in volcanic exhalations	304
Historical: c. 1853–c. 1963. The modern era: c. 1963 to the present. Theoretical and experimental aspects. Concluding statement.	
23. Petrogenesis: 1: The lavas	325
Relationships of the three lava groups: a single series? Provenance of the suite. Development of the principal lava groups. Concluding statement.	
24. Petrogenesis: 2: Exhalative ores	341
Broad considerations. Discussion. Summary of discussion: active magmatism versus passive leaching. Prognostications on the possible influence of magmatic processes on patterns of exhalative ore formation. Concluding statement.	
Epilogue	361
Bibliography	366
