

GEOCHEMISTRY AND MINERALOGY OF RARE EARTH ELEMENTS

FOREWORD and ACKNOWLEDGMENTS

The authors of this volume presented a short course on the rare earth elements to about 80 participants in San Francisco, California, December 1-3, 1989, just prior to the fall meeting of the American Geophysical Union. This was the nineteenth in a series of short courses that the Mineralogical Society of America (MSA) began sponsoring in 1974. It was the brain-child of Robert Hazen and David Stewart, and the latter was the agent who recruited Bruce Lipin (and later, Gordon McKay) to undertake this monumental work. This book joins a long list of *Reviews in Mineralogy* (see opposite page for details) that MSA has made available to the scientific community at reasonable cost.

The editors and authors thank Mrs. Marianne Stern and Mrs. Margie Sentelle at Virginia Tech for their tireless efforts (under considerable pressure) in preparation of camera-ready copy for this volume. We also thank Mr. Todd N. Solberg for helping with word-processing problems on the computer.

COSMOCHEMISTRY OF THE RARE EARTH ELEMENTS: CONDENSATION AND EVAPORATION PROCESSES

1	INTRODUCTION
1	Meteorites
3	Astrophysical context for interpretation of cosmochemical data
3	<i>Solar nebula</i>
3	<i>Solar abundances</i>
4	COSMOCHEMICAL PROPERTIES OF THE REE
5	REE condensation reactions
5	Activity coefficients
7	Partial pressures
9	Solid/gas distribution coefficients
11	Why are the REE volatilities so different?
11	CALCULATED REE PATTERNS
11	Early condensates
12	Removing REE in the gas
12	COMPARISON WITH METEORITIC DATA
12	Ultra-refractory component
15	Group II inclusions
17	FUN inclusions
17	<i>REE condensation as a function of oxygen fugacity</i>

18	<i>Astrophysical scenarios to alter oxygen fugacity</i>
19	Rims on CAI
19	WHAT HAVE WE LEARNED FROM THE REE?
21	High temperatures were achieved in the solar nebula
21	A very efficient mechanism for gas/dust separation existed in the solar nebula
22	The high nebular temperatures existed for a long time
22	A very intense, very brief, heat source also existed
22	The solar nebula was a chaotic environment
22	SUMMARY
23	ACKNOWLEDGMENTS
23	REFERENCES

Chapter 2

RADIOGENIC ISOTOPE GEOCHEMISTRY OF RARE EARTH ELEMENTS

25	INTRODUCTION
25	Long-lived radioactive isotopes of Rare Earth Elements
25	<i>^{138}La-^{138}Ce decay</i>
25	<i>^{147}Sm-^{143}Nd decay</i>
25	<i>^{176}Lu-^{176}Hf decay</i>
26	Chemical variations of La/Ce, Sm/Nd and Lu/Hf ratios
26	GEOCHRONOLOGICAL STUDIES
26	La-Ce and Lu-Hf chronology
26	Sm-Nd chronology
28	DEFINING BULK PLANETARY ISOTOPIC EVOLUTION
30	ISOTOPIC STUDY OF PLANETARY INTERIORS
30	The Moon
30	The Earth
32	Nd ISOTOPES IN STUDIES OF TERRESTRIAL CRUSTAL EVOLUTION
32	Model Nd ages of continental crust
34	Growth curves for the continental crust
35	Origin of granitoids
35	Nd isotopes and the sedimentary system
35	Characterization of whole crustal terranes
38	CRUSTAL Lu-Hf ISOTOPIC STUDIES
40	MAJOR UNSOLVED PROBLEMS
40	Continental crustal growth curve
40	Abundance of Archean continental crust
40	Origin of mantle isotopic variations
41	REFERENCES

PARTITIONING OF RARE EARTH ELEMENTS BETWEEN MAJOR SILICATE MINERALS AND BASALTIC MELTS

45	INTRODUCTION
45	Usefulness of the REE for petrogenetic modelling
46	Scope of this chapter
46	Caveat
46	HOW PARTITION COEFFICIENTS ARE MEASURED
47	Phenocryst/matrix studies of natural samples
48	Experimental measurement of partition coefficients

49	Basic experimental approach
49	Equilibrium
50	Percent level doping technique
53	Beta-track mapping technique
54	Other experimental approaches
54	Henry's law: The applicability of percent-level doping results
55	FACTORS GOVERNING MINERAL/MELT PARTITIONING
55	Ionic size and charge of trace element
57	Crystal field effects
59	Crystallographic versus defect sites: The Henry's law question
60	Phase compositions
62	Oxidation state
64	THERMODYNAMIC RELATIONSHIPS: DEPENDENCE OF PARTITIONING ON TEMPERATURE AND COMPOSITION
65	Other predictive approaches
67	SPECIAL APPLICATIONS
67	Eu as an oxygen fugacity indicator
69	Origin of the Eu anomaly in lunar mare basalts
71	REE PARTITION COEFFICIENT PATTERNS FOR THE MAJOR MINERALS
71	Plagioclase
72	Olivine
72	Pyroxene
73	<i>Low-Ca pyroxene</i>
73	<i>High-Ca pyroxene</i>
73	Garnet
73	FUTURE DIRECTIONS
74	ACKNOWLEDGMENTS
74	REFERENCES

Chapter 4

G. N. Hanson

AN APPROACH TO TRACE ELEMENT MODELING USING A SIMPLE IGNEOUS SYSTEM AS AN EXAMPLE

79	INTRODUCTION
80	REVIEW OF TRACE ELEMENT EQUATIONS
81	Melting
84	Fractional crystallization
85	Melting versus fractional crystallization
86	Essential structural constituents
88	EXAMPLE OF PETROGENETIC APPROACH
96	DISCUSSION AND SUMMARY
97	ACKNOWLEDGMENTS
97	REFERENCES

Chapter 5

W. F. McDonough & F. A. Frey

RARE EARTH ELEMENTS IN UPPER MANTLE ROCKS

99	INTRODUCTION
100	MASSIVE PERIDOTITES
102	Massive peridotites: dominantly lherzolite
102	<i>Western Alps - Lanzo</i>
105	<i>Western Alps - Baldissero, Balmuccia</i>
105	<i>Eastern Liguria, Italy</i>
106	<i>Western Liguria, Italy</i>
106	<i>Eastern Pyrenees - France</i>

106	<i>Ronda, Spain</i>
107	<i>Effects of late stage alteration on REE</i>
108	What can be inferred about the melting process and the segregated melts?
109	Massive peridotites: pyroxenite layers and veins and their wall rocks
109	<i>Amphibole-bearing pyroxenite veins</i>
109	<i>Anhydrous pyroxenite layers</i>
112	<i>How were the pyroxenite layers created? Evidence for multistage processes</i>
113	<i>Implications for mantle enrichment processes (metasomatism)</i>
115	Massive peridotites: dominantly harzburgite
115	Oceanic peridotites
118	ULTRAMAFIC XENOLITHS
119	Group I spinel peridotites
125	Garnet peridotites
127	Pyroxenite and related xenoliths
128	Models for REE abundance trends in peridotite xenoliths
130	MEGACRYSTS, MINERALS IN XENOLITHS AND DIAMOND INCLUSIONS
131	Megacrysts
132	Minerals in peridotites and pyroxenites
134	Inclusions in diamonds
134	SUMMARY: COMPARISON OF PERIDOTITES FROM MASSIFS AND XENOLITHS AND IMPLICATIONS OF REE DATA FOR UPPER MANTLE COMPOSITION
138	ACKNOWLEDGMENTS
139	REFERENCES

Chapter 6 R. I. Grauch

RARE EARTH ELEMENTS IN METAMORPHIC ROCKS

147	INTRODUCTION
147	REE RESIDENCE IN METAMORPHIC ROCKS
154	REE MOBILITY DURING METAMORPHISM
157	REE CONTENT OF METAMORPHIC ROCKS
160	SUGGESTIONS FOR FUTURE WORK
161	ACKNOWLEDGMENTS
161	REFERENCES

Chapter 7 S. M. McLennan

RARE EARTH ELEMENTS IN SEDIMENTARY ROCKS: INFLUENCE OF PROVENANCE AND SEDIMENTARY PROCESSES

169	INTRODUCTION
169	RARE EARTH ELEMENT PROPERTIES AND SEDIMENTARY ROCKS
171	Cosmochemical considerations
171	Geochemical considerations
173	Aqueous geochemistry
175	Normalizing and notation
176	SEDIMENTARY PROCESSES
176	Weathering
177	Diagenesis
179	Sedimentary sorting
184	REE AND PROVENANCE STUDIES
184	Sedimentary rocks and crustal abundances
185	Sedimentation and plate tectonics
188	Archean sedimentary rocks and the Archean crust
190	<i>Archean greenstone belts</i>

191	<i>High grade terranes</i>
191	<i>Archean/Proterozoic transition</i>
194	REE IN SEDIMENTARY ROCKS AND CRUSTAL EVOLUTION
195	ACKNOWLEDGMENTS
196	REFERENCES

Chapter 8

AQUEOUS GEOCHEMISTRY OF RARE EARTH ELEMENTS

201	INTRODUCTION
201	THE TRIVALENT LANTHANIDES (Ln III)
203	Types of complexes in solution
206	Hydrolysis products
206	Phosphate complexes
206	Carbonate complexes
209	Halide complexes
209	Complexes with total dissolved sulfur
210	GADOLINIUM-TERBIUM FRACTIONATION?
211	SCANDIUM AND YTTRIUM
211	EUROPIUM (II)
211	CERIUM (IV)
213	Eh-pH DIAGRAMS
213	Cerium
213	Europium
213	Other lanthanides
215	LANTHANIDES IN OCEAN WATERS
220	LANTHANIDES AND ACTINIDES
221	CONCLUDING REMARKS
222	ACKNOWLEDGMENTS
223	REFERENCES

Chapter 9

RARE EARTH ELEMENTS IN LUNAR MATERIALS

227	INTRODUCTION
227	THE NATURE OF PLANET MOON
229	THE MAGMA OCEAN HYPOTHESIS AND ITS PRESUMED PRODUCTS
230	LUNAR REE PATTERNS
231	Highland plutonic rocks
231	<i>Anorthosites</i>
233	<i>Dunites, troctolites, norites, and gabbros</i>
236	<i>Lunar felsite (granite)</i>
236	<i>Highland volcanic rocks: KREEP</i>
240	Mare basalts
241	<i>Mare basalt sources as magma ocean products</i>
245	<i>Assimilation of crustal material during basalt petrogenesis</i>
245	<i>Glassy spherules</i>
245	Soils and breccias
252	Caveat
252	ACKNOWLEDGMENTS
252	REFERENCES

COMPOSITIONAL AND PHASE RELATIONS AMONG RARE EARTH ELEMENT MINERALS

259	INTRODUCTION
259	GEOCHEMICAL BACKGROUND
260	MINERALS
265	COUPLED SUBSTITUTIONS
268	VECTOR TREATMENT
269	APPLICATION TO SELECTED MINERAL GROUPS
269	Fluorides
271	Carbonates
272	Fluorocarbonates
274	Monazite, xenotime, zircon, and related phases
276	Apatites
281	Florencite and related phases
281	A-B oxides (niobates, tantalates, titanates, ferrites)
284	<i>Fergusonite/beta fergusonite, ABO_4</i>
284	<i>Perovskite, ABO_3</i>
284	<i>Aeschynite/euxenite, AB_2O_6</i>
285	<i>Pyrochlore, $A_{1-2}B_2O_6(O,F,OH)$</i>
289	Allanite
291	Titanite
293	Garnet
293	Gadolinite
296	Chevkinite/perrierite
299	ELEMENT DISTRIBUTIONS: ACID-BASE RELATIONS
301	SUMMARY
302	ACKNOWLEDGMENTS
302	REFERENCES

Chapter 11

ECONOMIC GEOLOGY OF RARE EARTH MINERALS

309	INTRODUCTION
312	RARE EARTH MINERALS OF ECONOMIC IMPORTANCE
312	Bastnaesite
313	<i>Syntaxial growth in bastnaesite-type minerals</i>
315	<i>Occurrence</i>
315	Monazite
317	<i>Occurrence</i>
318	Britholite
320	<i>Occurrence</i>
320	Ancylite
321	<i>Occurrence</i>
322	Allanite
322	<i>Occurrence</i>
322	Xenotime
323	<i>Occurrence</i>
324	Crandallite group minerals
324	<i>Occurrence</i>
326	By-product yttrium from Elliot Lake
326	By-product REE from loparite
326	By-product REE from apatite
328	By-product REE from anatase
328	By-product REE and Y from eudialyte

330	CLASSIFICATION OF REE DEPOSITS IN CARBONATITES
330	Primary mineralization
330	<i>Mt. Pass, California</i>
331	<i>Kangankunde Hill, Malawi</i>
331	Hydrothermal mineralization
331	<i>Wigu Hill, Tanzania</i>
331	<i>Itapirapua, São Paulo, Brasil</i>
331	<i>Karonge, Burundi</i>
332	<i>Bayan Obo, China</i>
332	Supergene REE mineralization in carbonatites
333	<i>Araxá</i>
333	<i>Catalão I</i>
333	<i>Carbonatites of the Amazon</i>
333	<i>Mt. Weld</i>
334	CONCLUSIONS
334	ACKNOWLEDGMENTS
