SILICATE MINERAL DISSOI	LUTION AS
A LIGAND-EXCHANGE R	FACTION
Introduction	
Ligand-Exchange Kinetics	88
What is a ligand-exchange reaction?	
Solvent exchange rates vary with M-O bond	strengths
Brønsted reactions commonly proceed to equi	librium and affect rates 94
Ligands can promote reaction	
M-O bond dissociation can control rates of ch	relation 07
Mineral Surface Reactions	08
General comments	
Rate laws for surface reactions	08
Solute adsorption/desorption is usually faster	than dissolution 101
Brønsted reactions on mineral surfaces	102
Proton-promoted dissolution	104
Ligand-promoted dissolution	105
Orthosilicate Minerals	100
Experimental dissolution of orthosilicates	100
Orthosilicate mineral dissolution in nature	117
Conclusions and Predictions	112

CHEMICAL WEATHERING	
PYROXENES AND AMPH	IIBOLES
Introduction	116
MINCIAIURY OF COMBINION NOW INCOMES	100
Education y Chemical Reactors	101
Batch reactors	

Flow-through reactors	121
Interpreting reactor experiments.	122
Laboratory Dissolution Rates	123
Measurement of true steady state	123
Rate discrepancies	
Run duration	130
Mineral chemistry or structure	
Aging of powders	130
Surface area	131
Chemical affinity	131
Effects of varying solution composition	132
Mineral surface area	133
Surface area of starting material	133
Relationships between surface area and dissolution	133
Surface roughness	137
Etch pits	137
Relative elemental release rates	
Early observations	140
Enstatite, bronzite, diopside, tremolite	
Wollastonite	
Rhodonite	
Hornblende	142
Surface Analysis of Fe-free Inosilicates	142
Spectroscopy of laboratory-dissolved surfaces	142
Enstatite	142
Diopside	142
Wollastonite	143
Rhodonite	
Tremolite	144
Surface Analysis of Naturally Weathered Minerals	145
Coupled Oxidation-Reduction of Fe-containing Inosilicates	140
Rate Laws for Dissolution	140
pH dependence	148
Best estimates of empirical rate laws	
Trends in dissolution rates	
Temperature Dependence of Dissolution	157
Mechanism of Dissolution	157
Interface-controlled models.	150
Steady state leached layers	150
Helgeson model.	150
Rimstidt and Dove model for wollastonite	150
Stumm's surface protonation model	150
Surface charging of inosilicates	161
Alkaline dissolution of inosilicates	161
Point of minimum dissolution rate	162
Natural Inosilicate Weathering Rates	162
Mean maximum etch depth	162
Pit size distributions	164
Rate control in natural systems	165
Conclusions.
