|                                                     |     |
|-----------------------------------------------------|-----|
| <i>Preface</i>                                      | vii |
| 1. Groups                                           | 1   |
| 1.1 Introduction to Groups . . . . .                | 1   |
| 1.2 Subgroups . . . . .                             | 11  |
| 1.3 Homomorphisms of Groups . . . . .               | 16  |
| 1.4 Group Structure . . . . .                       | 22  |
| 1.5 The Sylow Theorems . . . . .                    | 31  |
| 1.6 Exercises . . . . .                             | 35  |
| 2. Rings                                            | 41  |
| 2.1 Introduction to Rings . . . . .                 | 42  |
| 2.2 Polynomial Rings . . . . .                      | 48  |
| 2.3 The Group of Units of a Ring . . . . .          | 53  |
| 2.4 Ideals . . . . .                                | 60  |
| 2.5 Quotient Rings and Ring Homomorphisms . . . . . | 70  |
| 2.6 Localization . . . . .                          | 78  |
| 2.7 Absolute Values and Completions . . . . .       | 82  |
| 2.8 Exercises . . . . .                             | 93  |
| 3. Modules                                          | 101 |
| 3.1 Vector Spaces . . . . .                         | 102 |
| 3.2 Modules . . . . .                               | 109 |
| 3.3 Projective Modules . . . . .                    | 117 |
| 3.4 Tensor Products . . . . .                       | 122 |
| 3.5 Algebras . . . . .                              | 128 |

|     |                                                           |     |
|-----|-----------------------------------------------------------|-----|
| 3.6 | Discriminants . . . . .                                   | 133 |
| 3.7 | Exercises . . . . .                                       | 140 |
| 4.  | Simple Algebraic Extension Fields                         | 143 |
| 4.1 | Simple Algebraic Extensions . . . . .                     | 144 |
| 4.2 | Some Galois Theory . . . . .                              | 152 |
| 4.3 | The Ring of Integers . . . . .                            | 158 |
| 4.4 | The Noetherian Property of the Ring of Integers . . . . . | 169 |
| 4.5 | Dedekind Domains . . . . .                                | 172 |
| 4.6 | Unique Factorization of Ideals . . . . .                  | 178 |
| 4.7 | Extensions of $\mathbb{Q}_p$ . . . . .                    | 181 |
| 4.8 | Exercises . . . . .                                       | 186 |
| 5.  | Finite Fields                                             | 191 |
| 5.1 | Invented Roots . . . . .                                  | 191 |
| 5.2 | Finite Fields . . . . .                                   | 193 |
| 5.3 | Linearly Recursive Sequences . . . . .                    | 200 |
| 5.4 | Exercises . . . . .                                       | 212 |
|     | <i>Bibliography</i>                                       | 215 |
|     | <i>Index</i>                                              | 217 |
