

Contents

Summary.....	I
Zusammenfassung.....	III
Acknowledgements	V
Contents.....	VI
Figures	X
Tables	XIV
Chapter 1 Introduction	1
Reducing conditions in soils	2
Methods to characterize reducing conditions in soils	7
Manganese and iron oxides in the soil environment	9
Scope of the thesis	12
Study areas and project implementation	13
Chapter 2 Comparison of redox potential dynamics in a diked marsh soil: 1990 to 1993 versus 2011 to 2014.....	15
Abstract	16
Introduction.....	17
Materials and methods	18
Study site.....	18
Data collection and soil properties 1990 to 1993	19
Data collection and soil properties 2011 to 2014	20
Climatic water balance and forecast.....	21
Results	21
Soil properties.....	21
Climatic water balance and water table depth	24
Soil redox potentials.....	25
Temporal resolution of redox potential measurements	27
Discussion	29
Comparison of E_H data and soil properties	29
Measurement interval of redox potential.....	32
Redox potential measurements and implications for marsh soil development	32

Conclusions	33
Acknowledgements	34
References	35

Chapter 3	Manganese Oxide-Coated Redox Bars as an Indicator of Reducing Conditions in Soils	38
	Abstract	39
	Introduction.....	40
	Materials and Methods	42
	Synthesis of Birnessite and Fe-Oxides.....	42
	Applying the Birnessite onto the Bars.....	43
	Checking the Adherence of Birnessite onto the PVC Bars	44
	Laboratory Experiment at Fixed Redox Conditions	44
	Laboratory Column Experiment.....	44
	Field Application.....	45
	Results and Discussion	46
	Manufacturing	46
	Microcosm Experiment.....	47
	Soil Column Experiment.....	48
	Field Application.....	51
	Conclusions	54
	Acknowledgements	54
	Supplemental Material.....	55
	References	58
Chapter 4	Comparison of manganese and iron oxide-coated redox bars for characterization of the redox status in wetland soils	61
	Abstract	62
	Introduction.....	63
	Materials and Methods	65
	Study Site	65
	Soil Characterization	65
	Field Monitoring	66
	Digital Analysis of Redox Bars	66
	Results and Discussion	67
	Climatic Water Balance, Water Table Depth and Soil Temperature ...	67

	Oxide Removal along Redox Bars	68
	Environmental Conditions Favoring Oxide Removal	70
	Typical depletion patterns along redox bars	72
	Conclusions	75
	Acknowledgments	75
	References	76
Chapter 5	Manganese and iron oxide-coated redox bars as a tool to in situ study the element sorption in wet soils	78
	Abstract	79
	Introduction	80
	Materials and Methods	82
	Study site	82
	Field monitoring	82
	Elemental analysis	82
	Fe precipitation along Mn redox bars	83
	Sorption characteristics of redox bars for various elements	83
	EDX analysis of redox bars	84
	Results and Discussion	84
	Fe precipitation along Mn redox bars	84
	Extractable element contents along redox bars	88
	Preference for element sorption to Mn or Fe oxides	91
	Sorption capacities: field-Fe oxides versus lab-Fe oxides	92
	Energy-dispersive X-ray spectroscopy of redox bars	94
	Conclusions	95
	Acknowledgments	96
	References	97
Chapter 6	Wetland restoration management under the aspect of climate change at a mesotrophic fen in Northern Germany	100
	Highlights	101
	Abstract	101
	Graphical abstract	102
	Introduction	103
	Materials and methods	105
	Study site	105

	Restoration acts and WT depth monitoring	105
	Meteorological parameters	106
	Statistical analysis	107
	Forecast of climatic development	108
	Results and discussion	108
	Climatic water balance and water table depths	108
	Relationship between WT depths and climate forcing	110
	Meteorological forecast	111
	Forecast of WT depth development	112
	Best management practices	114
	Conclusions	115
	Acknowledgements	116
	Supplemental Material	117
	References	118
Chapter 7	Comprehensive discussion	120
Chapter 8	References	135
	Eigenbeteiligung an den Veröffentlichungen	142
	Erklärung	143
