

Part 1 Descriptive statistics

1 Variables and measurement 3

The conceptualization and operationalization of variables 4

Levels of measurement 7

Discrete and continuous variables 11

Summary 12

2 Basic tools of description: Tables 15

Types of descriptive statistics 16

Percentages and proportions 17

Frequency distributions 19

Class intervals 23

3 Graphs 28

Some general principles 29

Pie graphs 29

Bar graphs 30

Histograms 33

Frequency polygons 34

Common problems and misuses of graphs 35

4 Measures of central tendency and measures of dispersion 41

Measures of central tendency 41

Choosing a measure of central tendency 47

Measures of dispersion 50

Summary 57

5 Descriptive statistics on SPSS 60

Assigning variable labels: The Define Variable command 62

Defining values: The Value Labels command 63

Data entry	67
Saving a data file	70
Opening a data file	71
Frequency tables using SPSS	72
Valid cases and missing values	73
Measures of central tendency using SPSS	75
Measures of dispersion using SPSS	76
Summary	77

6 The normal curve 79

The normal distribution	79
z-scores	84
Using normal curves to describe a distribution	87
Normal curves on SPSS	92

Part 2 Inferential statistics

A Hypothesis testing: The one sample case

7 Sampling distributions 103

Random samples	105
The sampling distribution of a sample statistic	107
The central limit theorem	112
Generating random samples using SPSS	113
Summary	117

8 Estimation and confidence intervals 118

Estimation	119
Changing the confidence level	125
Changing the sample size	128
Choosing the sample size	131

9 Introduction to hypothesis testing: The z-test for a single mean 134

Hypothesis testing: The general idea	134
Hypothesis testing in detail	140
What do inference tests 'prove'?	150
The significance of statistical significance	151
A two-tail z-test for a single mean	152
A one-tail z-test for a single mean	155
Summary	158

10 The t-test for a single mean 160

The Student's <i>t</i> -distribution	160
Degrees of freedom	163
The one-sample <i>t</i> -test using SPSS	169

11 The z -test for a single proportion 174

Binomial variables 174

The sampling distribution of sample proportions 176

The z -test for a single proportion 177The z -test for a single proportion using SPSS 179

Estimating a population proportion 181

Inference using the confidence interval for a proportion 182

12 One sample non-parametric tests 185

Parametric and non-parametric tests 185

The chi-square goodness-of-fit test 186

The chi-square goodness-of-fit test using SPSS 190

The chi-square goodness-of-fit test for normality 193

Another non-parametric test: The runs test for randomness 196

The runs test using SPSS 201

Part 2 Inferential statistics**B Hypothesis testing for two or more independent samples****13 The t -test for the equality of two means 209**

Dependent and independent variables 210

The sampling distribution of the difference between two means 212

The two-sample t -test using SPSS 217

One-tail and two-tail tests 221

Appendix: The z -test for two means 223**14 Analysis of variance 226**

Hypothesis testing with more than two samples: The general idea 226

The one-way analysis of variance F -test 231

ANOVA using SPSS 237

15 Ordinal data tests for two or more samples 245

The Wilcoxon rank sum test 246

The Wilcoxon rank sum test using SPSS 251

Other non-parametric tests for two or more samples 253

Appendix: The Mann–Whitney U -test 254**16 The chi-square test for independence 257**

The chi-square test and other tests of significance 257

Describing a sample: Crosstabulations 258

Crosstabulations using SPSS 261

Statistical independence and the relationships between variables 262

The chi-square test for independence 264

Degrees of freedom 268

The distribution of chi-square	269
The chi-square test using SPSS	272
Problems with small samples	275
Problems with large samples	276
Appendix: Hypothesis testing for two proportions	279

Part 2 Inferential statistics

C Hypothesis testing for two dependent samples

17 The <i>t</i>-test for the mean difference	287
Dependent and independent samples	287
The dependent samples <i>t</i> -test for the mean difference	288
The dependent samples <i>t</i> -test using SPSS	291
18 Non-parametric tests for dependent samples	298
The McNemar test for binomial distributions	298
The McNemar test using SPSS	301
The Wilcoxon signed-ranks test for ordinal data	303
The Wilcoxon signed-ranks test using SPSS	307

Part 3 Measures of association

19 Introduction to measures of association	313
Measures of association as descriptive statistics	313
If an association exists, how strong is it?	315
The pattern and/or direction of the association	316
Measures of association and tests of significance	317
20 Measures of association for nominal data	319
Cramer's <i>V</i>	319
Cramer's <i>V</i> using SPSS	321
Proportional reduction in error measures of association	324
Lambda	324
Lambda using SPSS	327
Limitations on the use of lambda	329
Appendix: Standardizing crosstabulations when lambda is zero	331
21 Measures of association for ordinal data	335
Gamma	335
Concordant and discordant pairs	336
Gamma using SPSS	341
Spearman's rank-order correlation coefficient	345
Spearman's rho using SPSS	348
Other measures of association for ordinal data	350

22 Regression and correlation for interval/ratio data 356

Scatter plots 356

Linear regression 358

Pearson's correlation coefficient (r) 366Explaining variance: The coefficient of determination (r^2) 368

Plots, correlation, and regression using SPSS 372

Testing for significance 378

The assumptions behind regression analysis 379

Summary 382

Appendix 386

Table A1 Area under the standard normal curve 386

Table A2 Distribution of t 387Table A3 Distribution of F 388

Table A4 Distribution of chi square 389

Key equations 390

Glossary 396**Answers 399****Index 420**
