<i>Preface</i>	xv
<b>Part I: Methodology and Techniques for Improvement</b>	<b>1</b>
<b>1 From the Top: A Strategic View</b>	<b>3</b>
Introduction: rising to the challenge?	3
Competition in the marketplace	3
The basic aims of an enterprise	6
Market intelligence: trend analysis	7
How do poor and inefficient practices develop?	7
Problems with conventional systems	8
A strategic direction: world class, continuous improvement	10
Limited improvements to date?	10
Compete to survive: mean, lean and responsive	11
Reducing total lead time	12
Flexibility and response	13
Awareness of the way forward	13
WCM foundations and tools	14
Summary	15
Further reading	15
<b>2 Total Quality, World Class Performance</b>	<b>16</b>
Introduction: joggers or athletes	16
A world class enterprise	18
Culture and philosophy for world class	20
Just-in-time and total quality philosophies	20
JIT as a way of life	21
JIT philosophy, culture, methods and techniques	24
Total quality management	25

What is quality?	28
Basic principles of total quality	29
Culture, organisation and systems for total quality	30
The TQM Approach	37
Costs of quality	39
Non-value-added activity costs	40
Case study: NVA costs for a UK pharmaceutical company	40
Total quality: impact on business strategies	41
Total quality strategy	42
Methodologies and techniques for total quality	42
TQM, JIT and MRP2	43
Summary	44
Further reading	45
<b>3 Strategy for the Whole Business</b>	<b>46</b>
Introduction	46
Strategies	47
Steps in business planning	47
Manufacturing: a traditional strategic misconception	48
What drives the business?	48
Case study: a sales-driven company	49
Flexibility	50
A new generation of manufacturing leaders	51
Strategy foundations	51
Total quality and business strategies	52
Systems engineering strategy	54
Business objectives	55
How do you measure up?	57
Case study: a purely financial plan divides a company	57
Strategy development timescales	59
Marketing strategy	60
Sales and marketing	62
Product development strategy	68
Market research	68
Manufacturing strategy	71
Case study: focused plant problems	73
Purchasing strategy	78
Distribution strategy	80
Business systems and IT strategy	81
Case study: strategy and actions for a UK £26 million turnover manufacturer	84
Summary	89
Further reading	89

<b>4</b>	<b>Review of the Company</b>	<b>90</b>
	Introduction	90
	Review what?	90
	Areas for review	91
	Basic steps in a review	92
	Planning and carrying out a review	92
	Implementing change following the review	93
	Resources for the review	93
	Guidelines for using consultants	94
	Team approach	96
	Basic review skills: systems analysis techniques	96
	Graphical analysis techniques	97
	Gathering information: data collection	104
	Interpersonal skills	105
	General checklists for business	108
	Case study: summary report on an integrated business control system for the Shakey Ladder Corporation	109
	Revision of review stages	118
	Summary	119
	Further reading	119
<b>5</b>	<b>Methods and Techniques for Improvement</b>	<b>120</b>
	Introduction	120
	Technology or methodology	120
	Procedures: get the basics correct	121
	Case study: a small batch operation	121
	Key skills from Japan	122
	People and productivity	122
	Non-value-added activities	123
	Key elements of systems engineering	124
	Problem clarification, analysis, solution and prevention	124
	Improvements: where do you begin?	131
	Problem analysis and rating: Pareto analysis	132
	Case study: raw material inventory	133
	Case study: air-conditioning audit	134
	Analysis and rating: impact changeability	134
	Case study: two potential areas for improvement are identified	135
	Analysis and rating: FMEA	135
	Analysis and rating: matrix diagrams	137
	Solution: the Deming circle	138
	Solution: decision analysis	139
	Case study: choosing computer hardware for a new IT strategy	140
	Organisational review: DPA	140
	Organisational review: from/to matrices	143

Summary	145
Further reading	145
<b>6 The Total Quality Organisation</b>	<b>146</b>
Organisational structure issues	146
The greenfield site approach	147
Break down functional boundaries and barriers	147
Decentralisation and natural groups	148
Organisational aims: natural groupings	149
Advantages of natural groups, cells and offices	151
Existing process layout or functional layout	154
Manufacturing systems engineering: autonomous cells	155
Measurements of performance for each area	157
Systems engineering: effective versus efficient	157
Organisational analysis and redesign	158
Cell and module definition	159
Cell management and sizing	159
Cellular versus linear	160
Physical layout of manufacturing cells	161
U-shaped cells	161
Product-based cell definitions	163
Office improvements	165
Case study: a single office	165
Case study: restructuring at ABC Engineering	168
Job design in review and reorganisation	171
Case study: job design in the single-office case study	172
Problems and barriers	174
Summary	175
Further reading	175
<b>7 Cellular Design and Operation</b>	<b>176</b>
Introduction	176
Cell definition and design: a systems approach	176
Preliminary analysis	177
Cell grouping definition	178
Customer/supplier definition	181
Cell autonomy analysis	182
Static cell design: average sizing and resources	182
Dynamic cell design	184
Case study: effect of batch size and set-up time on a bottleneck resource in an aerospace manufacturer	189
Case study: set-up reduction in a Japanese steelworks	192
Detailed dynamic design	196
Developing the optimal cell design	200

Control systems	203
Final cell definition	215
Case study: modified kanban cell control	216
Summary	218
Further reading	219
<b>8 Management of Change</b>	<b>220</b>
Internal resistance to change: a real obstacle	221
Several common forms of internal resistance	222
Managing change	223
Stages in the mission	229
Profile of mission stages	229
Areas and vehicles for change: culture, organisation and systems	236
Summary	245
Further reading	245
<b>Summary of Part I: The Route to World Class Performance</b>	<b>246</b>
<b>Part II: Selecting and Applying Appropriate Technology</b>	<b>249</b>
<b>9 Enabling Technologies for Competitive Manufacture</b>	<b>253</b>
Do we need these technologies?	253
Appropriate enabling technologies	255
Computer aided design	256
Computer aided manufacture	262
Numerical control machine tools	265
Process control technologies	269
Electronic data interchange	270
Business control and planning systems	272
Knowledge-based systems	273
Case study: product configuration and estimating using Digital's XCON	277
Simulation systems	278
Summary	278
Further reading	279
<b>10 Simulation of Business and Manufacturing Systems</b>	<b>280</b>
The role of simulation in business improvement	280
Options	280
Computer simulation	281
Validity of simulation	282
Simulation packages	283
Carrying out a simulation	288

Manual simulation in scheduling	294
Scheduling and simulation	295
Simulation as a scheduling decision support tool	296
Case study: the Witness simulation in aerospace manufacture	296
Case study: simulation application in the manufacture of chemicals and dyes	299
Summary	300
Further reading	301
 <b>11 Computers and Communications Systems: The Platform for Manufacturing Systems</b>	 302
Introduction	302
Movement in the IT industry and its effect on MIS support	302
Integrated data across the company	303
Mainframes, minis and micros	304
Operating systems and applications software	307
Modern software developments: 4GLs	308
Communication systems	310
Case study: strategic options for a business control system	330
Summary	332
Further reading	332
 <b>12 MRP2 Developments and Make or Finish to Order</b>	 333
Introduction: business planning and control systems	333
Background to MRP2	334
Everybody's information system: enterprise wide	341
Enterprise resource planning	341
Trends in the MRP2 industry	342
MRP2 software products	344
Additional features in modern MRP2 systems	345
MRP for the make-to-order sector	353
Links to CAD from MRP2	354
MRP2 order definition and configuration facilities	355
Expert systems for order options configuration	361
Case study: configuration of the single office in chapter 6	363
MRP materials and production planning problems	366
Case study: modify to order versus customer delivery date problems	368
Case study: SOP product configuration at Hussmann UK	375
Finite scheduling and expert systems	376
Case study: furnace scheduling using expert systems	393
Summary	396
Further reading	396

<b>13 A Guide to Successful MRP2</b>	<b>397</b>
Introduction	397
Management considerations	397
Case study: cost/benefit analysis of a small pharmaceutical company	408
Managing and running the project	410
Organisational approach	418
Prerequisites for success with MRP2	426
Technical aspects of implementation	431
Detailed implementation	438
Practicality	439
Implementation plans help current users	439
Performance measurements	439
Summary	447
Further reading	447
 <i>Appendix A</i>	 449
<i>Appendix B</i>	469
<i>Appendix C</i>	484
<i>Appendix D</i>	510
<i>Appendix E</i>	522
<i>Appendix F</i>	524
<i>Index</i>	529
