

Contents

Preface	vii
Introduction: About This Book	xv
The Quants Are Here	xvii
What You Won't Find in This Book	xviii
Sequence of Chapters	xix
The Obvious Usually Goes Unnoticed	xx
A Book for Beginners	xxi
Conventions Used in This Book	xxi
1 The Random Process and Gambling Theory	1
Independent versus Dependent Trials Processes	3
Mathematical Expectation	4
Exact Sequences, Possible Outcomes, and the Normal Distribution	7
Possible Outcomes and Standard Deviations	10
The House Advantage	14
Mathematical Expectation Less Than Zero Spells Disaster!	17
Baccarat	18
Numbers	19
Pari-Mutuel Betting	20
Decision Orientation versus Selection Orientation	24
Winning and Losing Streaks in the Random Process	25
Determining Dependency	26

The Runs Test, Z Scores, and Confidence Limits	28
The Linear Correlation Coefficient	33

2 Systems and Optimization 41

Money Management and Trading Systems	42
It Doesn't Pay to Fool Yourself	43
In Defense of Optimization	45
Measures of Performance—Pessimistic Return Ratio	45
De-Optimizing	47

3 Reinvestment of Returns and Geometric Growth Concepts 61

To Reinvest Trading Profits or Not	61
Measuring a Good System for Reinvestment—The Geometric Mean	65
Estimating the Geometric Mean	69
How Best to Reinvest	72

4 Optimal Fixed Fractional Trading 79

Optimal Fixed Fraction	79
Asymmetrical Leverage	81
Kelly	82
Finding the Optimal f by the Geometric Mean	84
To Summarize Thus Far	88
How to Figure the Geometric Mean Using Spreadsheet Logic	90
Geometric Average Trade	90
A Simpler Method for Finding the Optimal f	91
The Virtues of the Optimal f	93
Unanswered Questions	95
Why You Must Know Your Optimal f	97
Drawdown Is Meaningless, Biggest Losing Trade Isn't	105
Consequences for Straying Too Far from the Optimal f	110
Finding Optimal f via Parabolic Interpolation	117
Optimal f and Options	123

5	Risk of Ruin	132
	The Equations	134
	Withdrawing Funds	140
	Risk of Ruin in Fixed Fractional Trading	141
	Risk of Ruin versus f	147
6	The Total Portfolio Approach	149
	Modern Portfolio Theory	149
	The Markowitz Model	150
	Capital Asset Pricing Theory	153
	Transporting Portfolio Concepts to Futures	157
	The Geometric Mean Portfolio Strategy	162
	The Severity of Drawdown	167
7	Covering the Periphery	171
	A Summary of the Quantitative Approach	171
	Tougher Than It Looks	171
	Scale Trading Systems (Tactical Trading Systems)	176
	Old Axioms That Can Stand on Their Own	178
	Avoiding and Handling Mistakes	178
	Taking Profits	179
	A Last Look at Drawdown	180
	Regarding Reports	180
	Avoiding Catastrophe	181
	The Non-Stationary Distribution of System Trades	183
	Upside Potential	185
	Appendixes	
A	Using a Negative Mathematical Expectation Market System	187
B	Programming the Functions Described in the Text	189
C	The Cumulative Normal Distribution	199

D	The Calendar	200
E	Options Calculations	206
F	The Portfolio Program	224
G	Converting from a Z Score to a Confidence Limit	240
H	How the Dispersion of Outcomes Affects Geometric Growth	241
	Bibliography and Suggested Reading	246
	Index	249
