Introduction	1
1 Where do we stand? A survey	7
1.1 Growth and the functional income distribution: the classical and Marxian perspective	8
1.1.1 The classical view	9
1.1.2 The theory of Karl Marx	12
1.2 Distributional aspects of Keynesian and neoclassical growth theory	17
1.3 The Kuznets hypothesis and some cross-section data	19
1.4 How inequality and redistribution affects growth	24
1.4.1. The politico-economic approach	26
1.4.2 Capital market imperfections and non-convex technologies	27
1.4.3 Sociopolitical instability	30
1.4.4 Other approaches	31
1.4.5 Empirical evaluation of the various approaches	33
1.4.6 Conclusion and outlook to chapters 2 and 3	36
1.5 How technological change affects the income distribution	38
1.5.1 Earnings and income inequality in the OECD: empirical evidence	40
1.5.2 Skill-biased technological change: theory and evidence	48
1.5.3 Conclusion and outlook to chapter 4	54
2 Status concerns, inequality, and growth	57
2.1 Motivation	57
2.1.1 Some evidence for the presence of status concerns	58
2.1.2 Related literature	64
2.2 The model	67
2.2.1 Aggregate economy	67
2.2.2 Individual budget constraints and preferences	69
2.3 Equilibrium growth	71
2.4 Preferred growth rates and redistribution	73
2.4.1 Preferred growth rates and relative factor endowments	77
2.4.2 Preferred growth rates and status preferences	79
2.4.3 The role of a voter's relative factor endowment for status and preferred growth	81
2.5 Discussion	82
2.5.1 Other status concerns	82

2.5.2	Welfare effects of taxation	84
2.6	Summary	84
	Appendix to chapter 2	86
3	Inequality, voting over public consumption, and growth	90
3.1	Motivation	90
3.2	Voting over public expenditure: a simple model	93
3.3	Public expenditure in a growth model	99
3.3.1	Aggregate economy	99
3.3.2	Individual budget constraints and preferences	101
3.4	Equilibrium growth and public consumption	102
3.5	Individual demand for public consumption and growth	103
3.5.1	The case $\sigma = 1$	105
3.5.2	The case $\sigma \neq 1$	107
3.6	Voting equilibrium in the growth model	109
3.7	Discussion	109
3.7.1	Inequality and growth effects of taxation	109
3.7.2	Welfare effects	110
3.7.3	Specification of preferences and the role of savings	111
3.8	Some empirical evidence	112
3.8.1	Data sources	112
3.8.2	Estimated equations and results for OECD countries	113
3.8.3	Estimation results for democracies	116
3.9	Summary	117
	Appendix to chapter 3	118
4	Skilled labor reallocation, wage inequality, and growth	121
4.1	Motivation	121
4.2	The model	126
4.2.1	Final goods production	127
4.2.2	Intermediate goods production	128
4.2.3	Research	129
4.2.4	Effort supply and wages	130
4.3	Perfect foresight growth equilibrium	135
4.3.1	How the allocation of skilled labor affects relative wages and unskilled employment	136
4.3.2	Balanced growth	137
4.4	Comparative static results	138
4.4.1	Change in research incentives	139
4.4.2	Change in labor supply	140
4.4.3	Change in fairness considerations	142

4.5	Discussion	143
4.5.1	How the comparative-static results relate to the literature	143
4.5.2	Skilled labor reallocation versus biased technological change	144
4.5.3	Productivity growth and skilled labor reallocation	147
4.5.4	Social comparisons, wage inequality, and unemployment	148
4.6	Summary	149
	Appendix to chapter 4	151
5	Where do we go from here? Conclusions and open questions	158
	List of figures and tables	170
	References	172
