

TABLE OF CONTENTS

Part 1 **SUMMARY AND POLICY ISSUES**

| | |
|---|----|
| Economic role of materials – The need for analysis and statistics | 7 |
| Conventional materials/advanced materials – Substitution and effects on trade | 8 |
| Optimization of government strategies | 10 |
| The upsurge in co-ordinated research | 11 |
| Infrastructure and international co-operation | 12 |
| Diffusion of advanced materials and transfer of techniques | 14 |
| Education and vocational training: a growing role | 15 |
| Standardization: the need for an economic approach | 16 |
| The need for assessment | 18 |

Part 2 **GENERAL REPORT ON NATIONAL POLICIES**

| | |
|--|----|
| Introduction | 21 |
| <i>Chapter I. The economics of advanced materials and implications for governments</i> | 23 |
| Markets and dominant market positions | 24 |
| The leverage effect | 25 |
| Investment | 25 |
| Value of an advanced materials policy | 26 |
| <i>Chapter II. The emergence of materials strategies</i> | 28 |
| Genesis of a strategy: the case of the United States | 29 |
| Reasons for action on materials and national characteristics | 31 |
| <i>Chapter III. Strategies, policies and programmes</i> | 34 |
| The environment of materials programmes (indirect measures) | 34 |
| Comparative analysis – Approaches and criteria | 37 |
| Priorities and project selection | 43 |
| Importance of government contribution and statistical problems | 44 |
| Trends | 45 |
| <i>Chapter IV. Defence spending</i> | 47 |
| Ceramics | 47 |
| Composites | 49 |
| Metals and polymers | 51 |
| Semiconductors | 51 |
| Civil and military technologies | 52 |

| | |
|---|----|
| <i>Chapter V. Co-operative projects</i> | 54 |
| United States | 55 |
| Japan | 55 |
| Europe and other countries | 56 |
| Sectoral examples | 57 |
| <i>Chapter VI. Education and training</i> | 60 |
| Higher Education | 61 |
| Trends | 62 |
| Sectoral aspects | 63 |
| Vocational training | 64 |
| <i>Chapter VII. Standardization</i> | 65 |
| Government priorities and standardization | 66 |
| International aspects | 67 |
| <i>Chapter VIII. International co-operation</i> | 70 |
| Countries with a limited domestic market | 72 |
| Regional initiatives | 73 |
| Final remarks | 75 |
| Notes and references | 77 |
| Abbreviations | 85 |

ANNEXES

| | |
|--|-----|
| <i>Annex I. A few examples of markets for advanced materials</i> | 90 |
| Engineering ceramics | 90 |
| Composites | 91 |
| Engineering polymers | 92 |
| Superconductors | 94 |
| The new semiconductors | 95 |
| Optoelectronic components | 96 |
| Special metals and metallurgy | 98 |
| <i>Annex II. Materials science and engineering education and training</i> | 100 |
| Materials science and engineering degree courses | 100 |
| Conditions for the development of materials science education and the present trends | 104 |
| Supply and demand for materials qualifications: some figures | 105 |
| Refresher training | 108 |
| The influence of cultural factors and specifically national characteristics | 109 |
| Conclusions | 111 |
| Notes and references to Annexes I and II | 113 |
| <i>Annex III. National Policies</i> | 117 |
