

CONTENTS

Preface xi

1	INTRODUCTION	
	1.1 Multicast Applications	3
	1.1.1 Real-Time Multimedia Applications	4
	1.1.2 Real-Time (Streaming) Data Applications	5
	1.1.3 Non-Real-Time Multimedia Applications	6
	1.1.4 Non-Real-Time Data Applications	7
	1.2 Organization and Target Audience	9
2	LINK-LAYER MULTICAST VERSUS NETWORK-LAYER MULTICAST	
	2.1 Link-Layer Multicast	13
	2.1.1 Frame Relay Multicast	13
	2.1.2 Switched Multimegabit Data Service (SMDS)	15
	2.1.3 Asynchronous Transfer Mode (ATM)	15
	2.1.4 Link-Layer Multicast Issues	15
	2.2 Network-Layer Multicast (IP Multicast)	16
3	MULTICAST IP	
	3.1 Multicast IP Addressing	22
	3.1.1 Scoped Multicast Addresses	23
	3.1.2 Binding to LAN MAC Addresses	25
	3.1.3 Multicast IPv6	26
	3.1.4 Multicast Address Allocation	27

3.2	IGMP and Joining Multicast Groups	30
3.2.1	IGMPv1	30
3.2.2	IGMPv2	32
3.2.3	IGMPv3	34
3.3	Multicast Routing Protocols	34
3.3.1	Distance Vector Multicast Routing Protocol (DVMRP)	36
3.3.2	Protocol Independent Multicast—Dense Mode (PIM-DM)	38
3.3.3	Multicast Open Shortest Path First (MOSPF)	39
3.3.4	Shared-Tree (Sparse-Mode) Multicast Routing Protocols	41
3.3.4.1	Protocol Independent Multicast—Sparse Mode (PIM-SM)	42
3.3.4.2	Core-Based Trees (CBT)	45
3.4	Interdomain Multicast Routing	46

4

NETWORK INFRASTRUCTURES AND EASE OF IMPLEMENTATION OF MULTICAST IP

4.1	LANs and Campus Networks	52
4.1.1	Shared LANs	52
4.1.2	LANs Segmented by Bridges	53
4.1.3	Switched LANs	54
4.1.4	Campus Networks	55
4.2	Wide Area Networks (WANs)	56
4.2.1	Frame Relay	56
4.2.2	X.25	59
4.2.3	Switched Multimegabit Data Service (SMDS)	60
4.2.4	Asynchronous Transfer Mode (ATM)	61
4.2.5	Virtual Private Networking (VPN)	62
4.2.6	Two-Way Satellite (VSAT)	63
4.2.7	Hybrid One-Way Satellite Overlay to Land-Line Routed Networks	65
4.2.8	Future High-Speed Satellite Data Infrastructures	68
4.3	Coping with the “Last Mile”	70
4.3.1	High-Speed Permanent Links	71
4.3.2	Switched Links	72
4.4	Summary and Conclusions	73

- 7.1.4 Microsoft 121
- 7.1.5 3Com 122
- 7.2 Multimedia Protocols and Formats 123
 - 7.2.1 Multimedia Codecs 126
 - 7.2.2 Real-Time Protocol and Real-Time-Control Protocol (RTP and RTCP) 127
 - 7.2.3 Quality of Service, Resource Reservation Protocol (RSVP), and Flows 131
 - 7.2.4 Real-Time Streaming Protocol (RTSP) 135
 - 7.2.5 Multimedia File Formats 136
 - 7.2.6 Synchronized Multimedia Integration Language (SMIL) 138
- 7.3 Conclusions 139

8

RELIABLE MULTICAST APPLICATIONS AND TECHNOLOGY

- 8.1 Data-Only Real-Time Applications 144
- 8.2 Non-Real-Time Applications 146
- 8.3 Case Studies 146
 - 8.3.1 A Major Telephone Carrier 147
 - 8.3.2 3Com 148
 - 8.3.3 Toys “R” Us 149
 - 8.3.4 The Ohio Company 150
 - 8.3.5 THE BOX 151
 - 8.3.6 General Motors 152
- 8.4 Reliable Multicast Protocols—Requirements and Examples 153
 - 8.4.1 Brief Review of TCP 155
 - 8.4.2 Existing Reliable Multicast Protocols and Design Philosophies 159
 - 8.4.2.1 Generalized Reliable Multicast Protocols 161
 - 8.4.2.1.1 Scalable Reliable Multicast (SRM) 162
 - 8.4.2.1.2 Reliable Multicast Transport Protocol (RMTP) 164
 - 8.4.2.1.3 Pretty Good Multicast (PGM) 167
 - 8.4.2.2 Specialized Reliable Multicast Protocols 171
 - 8.4.2.2.1 Reliable Adaptive Multicast Protocol (RAMP) 171
 - 8.4.2.2.2 TIBCO 173
 - 8.4.2.2.3 Multicast File Transfer Protocol (MFTP) 173

8.5	Research Activities and Topics in Reliable Multicast	178
8.5.1	Forward Error Correction (FEC) Techniques	182
8.5.1.1	Erasure Correction	182
8.5.1.2	Layering Using FEC for Congestion Control	183
8.5.2	Bulk Feedback	185
8.5.3	Optimized Local Repair	185
8.6	Summary and Conclusions	188

9 THE CREATION OF GROUPS

9.1	The IETF MMUSIC Group Conferencing Architecture	196
9.1.1	Session Announcement Protocol (SAP) and Session Description Protocol (SDP)	198
9.1.2	Session Invitation Protocol (SIP)	200
9.2	MFTP Group Creation	201
9.2.1	MFTP Announce/Registration and Completion Phases	202
9.2.1.1	Closed Groups	202
9.2.1.2	Open Limited and Unlimited Groups	206
9.3	TIBCO's Publish/Subscribe and Subject-Based Addressing	207
9.4	Conclusions	208

10 SECURITY SYSTEMS APPLIED TO MULTICAST APPLICATIONS

10.1	Multicast Applications Needing Security	213
10.1.1	Collaborative Applications	213
10.1.2	Multimedia Streaming Applications	213
10.1.3	Data Streaming Applications	214
10.1.4	Bulk Data Transfer Applications	214
10.2	Malicious Attacks Using Multicast	215
10.3	Brief Review of Security Technology	215
10.3.1	Message Digests and Hash Functions	219
10.3.2	Key Management	220
10.4	Firewalls	223
10.5	Virtual Private Networks (VPNs)	226
10.6	IPsec	228
10.7	The Group Key Management Problem	229
10.8	Conclusions	230

5 REPLICATION, MIRRORING, AND CACHING

- 5.1 Caching and Replication: What Are They? 80
 - 5.1.1 Network Caching Systems 80
 - 5.1.1.1 The Web 81
 - 5.1.1.2 Today's Network Caching Systems 83
 - 5.1.1.3 Stale Content 86
 - 5.1.1.4 "Flushing" Algorithms (The "Garbage Collection" Problem) 87
 - 5.1.1.5 "Hit" Statistics 88
 - 5.1.1.6 Security Issues 88
 - 5.1.1.7 Copyright Issues 89
 - 5.1.2 Commercial Network Proxy Cache Products 89
 - 5.1.2.1 Treatment of Clusters 90
- 5.2 Replication/Mirroring 92
- 5.3 Summary and Conclusions 98

6 "PUSH" APPLICATIONS ("WEBCASTING")

- 6.1 The Content Aggregator 102
 - 6.1.1 PointCast 103
 - 6.1.2 Other Content Aggregators 106
- 6.2 Platform Providers 107
- 6.3 Proposed "Push" Standards 108
 - 6.3.1 Channel Definition Format (CDF) 109
 - 6.3.2 Meta Content Framework (MCF) and Resource Description Format (RDF) 110
 - 6.3.3 Open Software Description (OSD) 111
 - 6.3.4 HTTP Distribution and Replication Protocol (DRP) 111
- 6.4 E-mail as "Push" Technology 112
- 6.5 The Future of "Push"? 112

7 MULTIMEDIA STREAMING APPLICATIONS AND TECHNOLOGY

- 7.1 Business Case Studies 118
 - 7.1.1 Paribas 119
 - 7.1.2 Smith Barney 119
 - 7.1.3 National Institutes of Health 120

11

BARRIERS TO DEPLOYMENT

- 11.1 Reluctance to Change Today's Networks 233
 - 11.1.1 Private Network Barriers 236
 - 11.1.2 Public Network Barriers 237
 - 11.1.2.1 Virtual Private Networks (VPNs) 238
 - 11.1.2.2 The Internet 239
- 11.2 Conclusions 240

12

MUSINGS AND PROGNOSTICATIONS—WHAT DOES THE FUTURE HOLD?

- 12.1 Short-Term Trends 244
 - 12.1.1 Relative Costs of Storage and Bandwidth 244
 - 12.1.2 The Conversion of the Broadcast Industry from Analog to Digital 246
 - 12.1.3 Diminishing Costs for Remote Equipment for Wireless Transmission 246
 - 12.1.4 The Continuing Explosion of the Internet 247
 - 12.1.5 Organizations Are Becoming More Distributed 247
 - 12.1.6 Outsourcing of WAN Network Services 247
- 12.2 Long-Term Trends 248
 - 12.2.1 Huge Projects to Add High-Speed Wireless Data Infrastructures 248
 - 12.2.2 Continued Internet Growth Fueled by Voice 248
- 12.3 What Are the Implications for Multicast? 249

Glossary 251
